With respect to discrimination in employment, the female Ph.D.'s were asked: "If you have [presumably at any time] experienced any employment discrimination practices indicate which kind," with the choices listed in order of frequency of respondent designation, as follows: "differential salaries for men and women with the same training and experience" (40 percent of respondents); "differential sex policies regarding tenure, seniority, and promotions" (33 percent); "unwillingness and reservation on the part of employer to designate administrative responsibility and authority to professional women employees" (33 percent); "employer prejudices against hiring a woman" (25 percent), and "other" (12 percent).[14]

---

[13] Astin (1969). A total of 1,547 complete questionnaires were returned for an 83 percent response.

With male faculty outnumbering female faculty in universities 6 to 1, many women cannot help but feel that their interests and problems are not given proper consideration by their departmental colleagues, by university appointments committees, and by the administration. With such a sex ratio, faculty personnel policies could be expected to be oriented toward the normal career patterns of males and to neglect, to some extent at least, the interests of women pursuing careers in academe. Until sex discrimination in employment was banned by federal Executive orders and legislation, and women's groups pressured for policies oriented toward women's needs, universities generally paid little attention to possible sex bias in their hiring and employment policies. For example, antinepotism policies, either stated or assumed, served to reduce married women's employment opportunities by making it difficult for a female Ph.D. to obtain appropriate employment in the same university faculty as her husband, or to obtain part-time employment in regular faculty ranks, with all the leave-of-absence, benefit, and tenure rights and privileges that males on part-time status would have. Female faculty especially need those provisions for periods when pregnancy and child-rearing may make part-time employment necessary and desirable. Undoubtedly, scholars who aim at freedom from bias in their scholarly and scientific work should be reminded of the need to have fairness and equality of opportunity in the content and administration of university personnel policies.

It is interesting that statistics indicate that single women on university faculties seem notably less disadvantaged than married women. Undoubtedly that is due in large part to the handicaps that married women have in running a home and in adjusting to their husband's job mobility, both of which have already been discussed.[15]

---

[14] Ibid. (p. 179). Since male faculty members may also consider themselves discriminated against in salary, promotion, and distribution of administrative responsibility and authority, it would be interesting to have the response of a similar cohort of male Ph.D.'s to the same questions.

[15] As indicated in the text, the December 1965 survey of women receiving Ph.D.'s in 1957 and 1958 showed that about one-fourth of the married women considered their husband's job mobility a hindrance to their own career development, and for a sixth of them their husband's attitude toward their working was

Some studies indicate that marital status is perhaps the most significant factor in explaining differences in salary and in promotion rates between women and men. An analysis of the faculty status of women and men in the cohort who received Ph.D. degrees in 1940 and remained in academic employment shows that 20 years later (in 1960) some 85 percent of the males and 70 percent of the unmarried women had attained the rank full professor, whereas only 46 percent of the married women had done so. It was concluded that about three-fifths of the promotion differential between women and men academics in that sample could be explained by comparing single women with men.[16]

A questionnaire survey in 1967 of women who received their Ph.D.'s in the arts and sciences and education between 1958 and 1963, and who were employed full-time in faculty positions, had similar results. Among the unmarried women in 1966–67, the ratio of instructors and assistant professors combined (the first rungs on the promotional ladder) to associate and full professors combined was as follows: for single women, 1.1 full and associate professors for each instructor–assistant professor; for men, 1.3 full and associate professors per instructor–assistant professor; and for married women, 0.4 of a full and associate professor per instructor-assistant professor (Simon, Clark, & Galway, 1967, p. 226).[17] The figures for percentages on tenure were much the same: 44 percent for single women, 46 percent for men, 26 percent for married women with children, and 22 percent for married women without children (ibid., p. 229). The view has been expressed that radical reform in sex roles and in responsibilities for household functions and child-rearing will be necessary to provide married women an equal opportunity with men to advance in their professional careers. As already noted, a significant increase in the sharing of such duties has occurred among some young couples in academic life in recent years.

---

regarded as a hindrance. The married women were presumably spending an average of around 20 hours a week on the care of children (the 10-hour figure was an average for all women) plus the 18-hour-a-week average for all women spent on household duties.

[16] See Johnson and Stafford (forthcoming). This part of the paper is based on data from National Academy of Sciences (1968, pp. 21, 71, and 85). See also Malkiel and Malkiel (1973).

[17] Completed questionnaires were received from about 60 percent of the women and men (a sample one-third the size of the women's list), leaving an academic-employed sample of 670 single women, 148 married women, 234 married women with children, and 354 men.

Since World War II there has been a secular rise in the emphasis on research in faculty careers, especially in major universities. At the same time in many disciplines the rate of creation of new knowledge has been accelerating. Those developments require more preparation to keep abreast of changes and the allocation of more faculty time to research activity. It becomes increasingly difficult for a woman with heavy household responsibilities to make an outstanding record as a scholar or even to keep abreast of developments in her field.

Data on teaching faculty in universities show that women generally devote much less time to research activities and do less graduate teaching than men. To some extent the figures are biased against female faculty because of the high proportion of female Ph.D.'s in education and home economics, where research is likely to receive less stress. Even allowing for that fact, the male-female differences are significant.

A survey for 1972–73 reveals the following facts concerning teaching faculty in universities: the highest degree held is the Ph.D. or Ed.D. for 19 percent of the women and 48 percent of the men; while the M.A. is the highest degree for 60 percent of the women and 25 percent of the men;[18] 42 percent of the women and 19 percent of the men spend no time in research and scholarly writing (or did not answer the question); at the other extreme, 9 percent of the women and 24 percent of the men spend 17 hours a week or more in such research activities. Ten percent of the women and 39 percent of the men had published 11 or more journal articles, and 11 percent of the women and 24 percent of the men had published three or more books, manuals, or monographs. Concerning published writings in the most recent two years, 14 percent of the women and 40 percent of the men had three or more publications during that period. Thirteen percent of the women and 25 percent of the men considered that their single most outstanding accomplishment was in research and writing. With respect to graduate students, 49 percent of the female faculty and 31 percent of the men currently were not teaching any graduate students.[19]

---

[18] Bayer (1973, p. 26). Of the remainder, 5 percent of the women and 9 percent of the men have professional law or medical degrees.

[19] Ibid. (pp. 24, 28–29, and 32). The category of "none" for teaching of graduate students includes respondents not marking that part of the question but pro-

No clear conclusions can be drawn from the available data on the relative importance of the various obstacles to the development of a larger supply of women who could in the future, through research and advanced teaching, qualify for tenure positions in major universities, if equal employment opportunity were assured women aiming at top-rank faculty careers. It is even difficult to define exactly what nondiscrimination and equal employment opportunity mean, given the complexity of the factors and considerations involved. Nevertheless it is evident that talented women, by the choices they make and the priority they give to career ambitions, can have a significant effect on the supply of women able to qualify for tenure faculty appointments at major universities.

EXPERIENCE IN WESTERN EUROPE AND RUSSIA

Marked differences exist in the distribution of men and the distribution of women by faculty rank in universities in both this country and abroad. For male faculty, the largest number are at the professor level; for female faculty, the largest number are at the assistant professor level. The distribution for female faculty is shaped like a pyramid; the male faculty distribution is shaped like an inverted pyramid. The contrast is brought out in Table 2 showing the overall figures for university faculties in the United States in the academic year 1972–73. Two-thirds of the male faculty are

TABLE 2 ***Percentage distribution of university faculty by rank and sex for the United States, 1972–73***

---

viding answers to other parts and to other questions, thus providing grounds for believing that the percentages in the text are approximately correct. The survey of college and university faculty conducted in 1968–69 by Bayer showed that 48 percent of the female faculty in universities and 24 percent of the men were teaching entirely in undergraduate programs.

TABLE 3 ***Women and men in university faculties as percentage of total in the rank, 1972–73***

Rank	*Women*	*Men*
Professor	5.2	94.8
Associate professor	12.3	87.7
Assistant professor	22.2	77.8
Instructor and lecturer	37.6	62.4
TOTAL	15.3	84.7

in the two tenure ranks (professor and associate professor), whereas only one-third of the female faculty have that status.[20]

Table 3 shows the marked difference in the proportion of women and men in the various ranks. The women's percentages are progressively smaller as one moves up in rank. The male percentages—the obverse of the female—have the inverted pyramid shape, expanding in percentage terms with each higher rank.

It is widely asserted that any significant deviation of the women's distribution in the three professorial ranks from the men's distribution in those ranks is evidence of a pattern of sex discrimination. The assumption is that equal employment opportunity would lead to the same percentage for women in each professional rank. That assumption fails to take account of the distribution of the qualified supply of women for university appointment at particular ranks. Because, on the average, female faculty devote less time and energy to professional development (especially research) than men and more time to home responsibilities, a smaller percentage of women really qualify for the upper ranks.

Two kinds of factual information support that conclusion. One is that the distribution of single women by faculty rank seems, as we have observed, to resemble the distribution for men more than it does the distribution for married women. The other is that the difference between male and female distributions for university faculty appears to be a generally prevalent phenomenon.

It is remarkable how universal the pyramid shape of women's distribution in the academic profession is. In her useful review of experience of women at work in European countries, Marjorie Galenson finds that, in university teaching in every country for which data are available, the percentages become smaller as one moves up the promotional ladder, with relatively few women at the full professor level (Galenson, 1973, pp. 27, 107–108). She observes that it is "an apparently universal phenomenon" with the professions for the proportion of women to decline "as the promotional ladder is ascended." As part of the explanation she points out that "unlike single women, who are likely, other things equal, to be more successful over their working lives, the probability is that married women will continue to subordinate their careers to their major commitment to their families for a long time to come" (ibid., p. 112).

---

[20] The age distribution of male and female faculty is quite similar except that 11 percent of the women and only 5 percent of the men are in the category of "30 or less."

The experience of the Soviet Union is most instructive in this regard, and shows how basic the pyramid distribution for faculty women is.[21] For decades Russian women have enjoyed equal employment opportunity under a strong government and Communist party affirmative action plan. The Soviet Union appears to lead the world in making use of the creative talents of women in fields that elsewhere are dominated by men. For example, women constitute three-quarters of the medical profession, one-half of the scientific workers in research institutions, and one-third of the engineers in the country (Dodge, 1966, pp. 193–95, 211, 237).

In education and advanced training for professional careers, there has been practically no differentiation by sex. A uniform curriculum through the tenth grade ensures that girls will receive as much training in science and mathematics as boys. For many decades there has been free and equal access to university and professional training and free choice of the field of study and of occupation. Soon after the Soviets came into power, basic legislation was passed providing sexual equality of employment opportunity.

Compared with other countries, the Soviets have been remarkably successful in interesting women in fields of science, technology, and medicine. In recent decades, the national government has made major efforts, through the mass media, to interest girls and young women in professional careers and to gain social approval for women in professional work as intelligent and patriotic citizens. Such efforts have been generally successful. By 1947, women constituted 35 percent of the teaching staffs of institutions of higher education. They were 47 percent of the teachers of biology and medicine, 45 percent of the chemists, 23 percent of the geologists, and 21 percent of the physicists and mathematicians (ibid., p. 244). Between 1946 and 1964 women received about 30 percent of the Ph.D.'s (equivalent) that were granted (ibid., pp. 136–137).[22]

---

[21] Professor Norton T. Dodge has made a thorough study of academic training of women in the Soviet Union for professional occupations and of women's achievements particularly in science and technology in universities and research institutes. His analysis covers the period from the Revolution (1917) to 1966, when his book on the subject was published. This discussion of women in teaching and research in Soviet universities is based on Dodge's book.

Despite the Soviet Union's success in encouraging women to pursue professional careers, the pyramid phenomenon prevails. As Table 4 shows, women constitute a decreasing percentage of those in the ranks as one moves up from assistant professor to professor. The greatest differential between the sexes is at highest levels of scholarly and scientific achievement (ibid., pp. 236–245).[23]

Professor Dodge explains that Soviet women, who have the training and capacity for first-rank creative work in the arts and

---

[22] The Ph.D. equivalent is called the "candidate degree." It may be earned through completion of formal training, with examinations and defense of a dissertation, or on a merit basis as recognition for outstanding scholarly or scientific work without examinations or a thesis defense. Formal work toward the candidate degree may be done at regular universities and technical institutes or at scientific research institutes or laboratories. Women constituted about 30 percent of those holding candidate degrees in 1965 (Dodge, 1966, pp. 134, 199).

[23] It should be pointed out that the Russian figures are not strictly comparable with those for the United States. In Russia, persons once certified in an advanced academic rank (professor, associate professor) continue to retain that rank in the statistics wherever he or she is employed – in universities, research establishments, industry, or government. About two-thirds of the professors of both sexes are employed in universities, and it can be assumed that practically all of them have Ph.D. equivalency since three-fourths have the even more advanced "doctor degree." Almost three-fourths of the associate professors are employed in institutions of higher education, and over 90 percent of them have the equivalent of the Ph.D. (the candidate degree). The bulk of the junior research workers are in scientific research establishments and the majority of assistant professors are in institutions of higher education; of this combined group less than one-quarter have the candidate degree.

TABLE 4
Female scientific workers with academic titles in the Soviet Union; percentage distribution by rank and percentage of total in the rank, 1964

	Distribution	*Percent of rank*
Academicians, corresponding members, and professors	2.3	8.3
Associate professors	20.5	19.1
Senior research workers	18.4	29.0
Junior research workers and assistant professors	58.7	52.3
Total (or percent of total)	100.0	32.2

SOURCE: Dodge (1966, p. 197).

sciences, generally have a lower level of achievement than men because child-care and household duties do not permit the sustained intellectual concentration that such achievement requires (ibid., p. 233)[24] He found from an extensive analysis of articles in scientific and technical journals, "further unmistakable evidence that the scholarly productivity of women is lower than that of men"; the analysis showed that "the average woman contributed about half as many articles as would be expected from their numbers" in the academic discipline.[25] Although the career obstacles of marriage and motherhood are not likely to be reduced drastically in the future, Dodge believes that probably the "professional productivity" of women is likely to increase over the years as their potential for creative work is more fully realized, which, in turn, would lead to a higher proportion of women in the upper ranks of the universities and technical institutes (ibid., p. 236).[26]

That there now is a good basis for such a conclusion is indicated by Table 5. Although progress has not been rapid from 1950 to 1970, there is an unmistakable upward trend in the percentages for full and associate professors relative to those for research workers and assistant professors, as well as an overall increase in the percentage of female faculty.[27] To that extent the extreme triangle has been modified in the Soviet Union.

---

[24] Dodge concludes (1966, p. 4) "that the relatively small proportion of women in jobs with the greatest responsibility is far more a reflection of their lower productivity than the result of discrimination."

In the mid-1960s, it was estimated that approximately 12 percent of the children of nursery age and 20 percent of the children of kindergarten age were accommodated in permanent child-care facilities, mostly in urban centers. Women's liberation from housework had partly taken place through sharing of that work. Data for certain cities in the early 1960s indicated that men were spending two-thirds as much time as their working wives on household duties and child care. Nevertheless, working mothers generally continued to bear a disproportionate burden compared with men (ibid., pp. 94, 98).

[25] See Dodge (ibid., pp. 236, 245, and 304–305), where the method used by the author in making the analysis of publications by sex is explained.

[26] Dodge points out that the personal contacts among male scientists going back to the 1920s and 1930s, when female scientists were less plentiful, may be a factor in the continued male dominance of the highest echelons of the scientific academies (ibid., pp. 220–222).

[27] It should be pointed out that the percentages in Table 5 are undoubtedly somewhat affected by a high woman-man ratio and a high proportion of single women that existed during this period as a result of so many men being killed in World War I, the Revolution, and especially World War II. The ratio of men to women in the Russian population fell from 99 men to 100 women in 1897 to 92 in 1939 and 74 in 1946, and had risen to 83 by 1959 (ibid., p. 238).

TABLE 5
Women as a percentage in each rank according to academic titles, Soviet Union, 1950, 1960, 1965, and 1970

Titles	*1950*	*1960*	*1965*	*1970*
Academicians, corresponding members, and professors	5.4	7.3	8.8	9.9
Associate professors	14.8	17.1	19.5	21.0
Senior research workers	30.4	28.4	28.9	25.1
Junior research workers and assistant professors	48.0	51.0	51.1	49.8
TOTAL	26.9	28.2	38.3	38.8

SOURCE: Dodge (1966, Table 115, pp. 196–197, updated by Dr. Dodge with data from *Narodnoe khoziaistvo SSSR v 1969 godu* and *ibid. v 1970 godu*, pp. 709–710 and 656–657). There are still lower categories not included among the figures in this table, which are the equivalent of instructors and teaching assistants.

This long experience in the Soviet Union indicates how unrealistic the statement (page J4 in the HEW Guidelines) concerning the timetable for achieving the HEW goal of proportional representation for female faculty is: "In many cases this [overcoming all underrepresentation] can be accomplished within 5 years; in others more time or less time will be required." That statement is made at a time when 65 percent of the regular university faculty have tenure and the total university faculty is not growing and is not expected to expand much in the next 5 years.

THE SITUATION FOR BLACK FACULTY

The supply situation for black men and women for university teaching differs significantly from that for white women. Women in general represent around 13 percent of all holders of Ph.D. degrees; blacks of both sexes constitute about 1 percent of those with Ph.D. degrees.[28]

A survey in 1969 revealed that of the 1,096 blacks with Ph.D.'s who responded,[29] approximately four-fifths were men and one-fifth women. About three-quarters of them had received their undergraduate training in black colleges. Some 85 percent of the Ph.D. holders were in college and university teaching, and of those on faculties, four-fifths were holding positions in Negro colleges (ibid., pp. 4, 7–8).

---

[28] A survey in 1968–69 indicated that less than 1 percent of all earned doctoral degrees in this country are held by blacks. In the five years from 1964 through 1968, black Americans received 0.8 percent of the Ph.D.'s awarded by graduate schools of arts and sciences in this country. See Bryant (1969, pp. 3 and 7).

[29] The survey had the names of 2,280 black Ph.D.'s from whom 1,096 questionnaire replies were received, or about a 50 percent return.

The survey found that, as generally has been the case for women, it required a longer period for blacks to complete their Ph.D. training—their median period for completion was 13 years. The average age at which they obtained the Ph.D. degree was around 37 years. The black Ph.D.'s were distributed as follows: 29 percent in education, 26 percent in the social sciences, 25 percent in the biological and physical sciences, 12 percent in the humanities, and the remaining 8 percent in other fields such as agriculture, business, engineering, home economics, and religion.[30]

As such data indicate, black Ph.D.'s in academic careers have, generally speaking, been disadvantaged (1) by shortcomings in their educational preparation before entering graduate school and (2) by lack of sufficient opportunity to make important research contributions because such a large proportion of them are in college teaching, especially at Negro colleges where the stress has had to be primarily on teaching.

Universities can undoubtedly make their greatest affirmative action contribution on the supply side by exerting strong efforts to encourage able black students to enter on an academic career, to assist them in getting excellent professional training in graduate school and in completing their Ph.D. requirements as soon as feasible, and to help in getting them started on an important program of research in the early years after they obtain their Ph.D. degrees. In recent years, major universities have been engaged in such efforts.

From 1968 on, many universities have made strong efforts to develop and acquire black faculty. With the launching of Afro-American studies programs or departments in the late 1960s, staffed largely by blacks, and under pressure from HEW compliance officials and black students, a kind of special market tended to develop for black faculty. Many universities offered appointments to black faculty at salaries well above those for whites with equivalent or better qualifications. In some cases the salary offers were $3,000 to $4,000 a year higher for blacks at the assistant professor level and $5,000 to $8,000 higher at the associate and full professor levels.[31]

---

[30] See Bryant (1969, pp. 5–6). The average age upon receipt of the Ph.D. was calculated from Table II, p. 6.

[31] Among the most extreme instances of reverse discrimination were the offer of associate professorships to blacks just completing their Ph.D.'s and the case of a black assistant professor of philosophy on full-time appointment at a yearly salary of $13,000 at Yale in 1971–72, who was discovered to have also a full-time tenure appointment at the New York State University at Stony Brook at double the salary—$26,000 (*New York Times*, 1972).

As early as 1968 a significant increase had occurred in the number of job inquiries and job offers received by black faculty. A study, based on a sample of 699 black faculty in some 184 non-Southern, predominantly white colleges and on a comparable sample of 440 white faculty (40 percent of the blacks and 70 percent of the whites had Ph.D. degrees), showed that for the academic year 1968–69 the blacks averaged 3.1 job offers, whereas the whites averaged 1.5 offers. The author states that "Blacks with the doctorate from high quality schools who have published report jobs by invitation almost four times as often as whites with the same excellent credentials" and that as early as 1968–69 there was "reverse discrimination in which blacks already in the academic profession are sought out by predominantly white colleges and universities" (Rafky, 1971).

A questionnaire study in 1970, answered by 1,385 blacks with Ph.D. degrees, indicated that the median increase in salary necessary to attract them away from their present positions (mostly in predominantly black institutions) was around $7,500 a year in biological sciences, $6,250 in the social sciences, and $5,500 in the physical sciences and humanities (Mommsen, forthcoming). Such salary elevations would represent a median increase from existing salaries amounting to around 45 percent for those in biological sciences and roughly 35 percent in the other three divisions. Since the black Ph.D.'s had reported increasing numbers of job inquiries and offers during the previous academic year, there was some factual basis for their supply-price figures. Also, their responses indicated that generally they would be more influenced by career opportunities at institutions from which they might receive offers than they would by the racial composition of the faculties.

As the percentages in Table 6 indicate, the expansion in black faculty during that four-year period was heavily concentrated in universities, where their proportion of total faculty almost doubled, and in two-year colleges, where their proportion tripled. The four-year colleges, including the Negro colleges, showed only a small

TABLE 6 ***Black faculty as a percentage of total college and university faculty in the United States, 1968–69 and 1972–73***

Type of institution	*1968–69*	*1972–73*
Universities	0.5	0.9
Four-year colleges	5.0	5.4
Two-year colleges	0.7	2.1
All institutions	2.2	2.9

SOURCES: Bayer (1970, p. 12) and Bayer (1973, p. 31).

increase. The most rapid expansions were for men in universities (0.4 to 0.9 percent; women, only 1.0 to 1.2 percent) and for women and men in two-year colleges (women, 1.4 to 4.2 percent; men, 0.5 to 1.3 percent).[32]

The corresponding figures for women are significantly different, as Table 7 indicates. Women declined as a percentage of the faculty in four-year colleges and in two-year colleges from 1968–69 to 1972–73. Only universities showed a relative increase in female faculty in that four-year period, which raised the women's percentage of total faculty from 19 to 20 percent.

STATISTICAL ANALYSES OF SEX BIAS IN SALARIES

Universities are charged also with discrimination against women in terms of salary. This section critically examines three statistical studies of sex differentials in faculty salaries, drawing also on material already presented in this chapter. Two of the studies, one by Elizabeth Scott (Carnegie Commission, 1973*b*, pp. 115–123 and Appendix E, pp. 199–235) and the other by Helen S. Astin and Alan E. Bayer (1973, pp. 333–356) use the Carnegie Commission Survey of Faculty and Student Opinion (1969 data)[33] as the statistical basis for their analyses and conclusions. The study by George E. Johnson and Frank P. Stafford (forthcoming)[34] primarily uses National Science Foundation data for

TABLE 7 ***Female faculty as a percentage of total college and university faculty in the United States, 1968–69 and 1972–73***

Type of institution	*1968–69*	*1972–73*
Universities	14.8	16.5
Four-year colleges	22.7	21.8
Two-year colleges	25.6	21.9
All institutions	19.1	20.0

SOURCES: Bayer (1970, p. 7) and Bayer (1973, p. 11).

---

[32] It is interesting to note, by way of contrast, that the percentages for Asian faculty between 1968–69 and 1972–73 remained fairly constant (except for a significant increase in two-year colleges), so that for all institutions the percentages were 1.3 percent in 1968–69 and 1.5 percent in 1972–73.

[33] Faculty material in that survey is contained in Alan E. Bayer (1970), to which reference is made in Tables 6 and 7 and in footnotes in this chapter. Scott used a selected sample of 17,654 and Astin and Bayer a sample of 6,892, out of a nationally representative sample of 460,028 faculty members in 253 institutions.

[34] Johnson and Stafford's paper is part of a project on academic and professional compensation sponsored by the American Association of University Professors. See "Surviving the Seventies" (1973).

Ph.D.'s in academic employment in six disciplines. Its analysis applies life-cycle training theory, which, starting with a little sex difference at the time of completion of the Ph.D., analyzes sex differences in salary thereafter in terms of on-the-job training or development of professional earning capacity (human capital) during the individual's ensuing life cycle over a 30-year period.

Statistical studies of discrimination in employment are handicapped by the fact that discrimination is not directly measurable. Thus its association with a particular factor or factors cannot be directly calculated. Instead, a residual approach is often used. Allowance is made for the calculated effect of each of a number of relevant factors, and any remaining difference (residual quantity) after such allowance is assumed to represent discrimination.

The residual approach for determining discrimination in employment is likely to be plagued by two difficulties. The first is that one or more significant factors (variables) may be left out of the analysis, which will, of course, affect the size of the residual. The second difficulty involves determination of the amount by which each individual's stock of "human capital" (earning power) is enhanced through his or her on-the-job experience (teaching, research, and learning from colleagues). Spread of a certain quantity of experience over a longer period of time for women than for men, due to part-time service or gaps in employment, may result in a smaller net increase in women's earning power through on-the-job experience. Partly that may be because of the time factor in obsolescence of knowledge and skills in fast-moving fields. Obviously, unless adequate allowance is made for such factors, at least part of any residual should not be attributed to discrimination.

The Scott study is a macro-type analysis in that it uses statistics representing all colleges and universities, including professional schools, in quite broad categories. The analysis is broken down for arts and sciences only by division (biological and physical sciences, social sciences, humanities, and fine arts) and by the six Carnegie Commission classifications of colleges and universities (Research Universities I, Research Universities II and other Doctoral-Granting Universities I and II, Comprehensive Universities and Colleges, etc.)[35] There is no breakdown by faculty rank, by academic department, or by individual institution.

---

[35] Research Universities I are the 50 leading universities in terms of federal financial support of academic science in two of three years, which awarded at least 50 Ph.D's in 1969–70. Research Universities II and other Doctoral-

Essentially the Scott study employs a complex statistical analysis (multiple-regression analysis) for arriving at predicted salaries for men and women on the basis of the data. The analysis involves taking into account the influence of 30 variables—personal characteristics, education, experience, and institution—that are associated with differences in faculty members' salaries. Among the 30 predictor variables are age, highest academic degree, year degree was obtained, prestige of granting institution, years employed in higher education, years employed in present institution, scheduled hours of teaching per week, number of published articles, and number of published books.

A predicted average salary was calculated after statistically controlling for all 30 predictor variables in a multiple-regression equation. A separate analysis is made for men and for women, since some of the coefficients for particular variables are significantly different for men and women. For example, advanced degrees are calculated to be much more significant salarywise for men than for women; the coefficients show that, for men, salaries vary directly with the quality of the employing institution within each category of institution, and not for women; but the effect of the number of publications on salary was determined to be about the same for both sexes (Carnegie Commission, 1973*b*, pp. 206–207).[36]

On the basis of the female regression equation, the predicted average salary for male faculty members for all institutions is found to be below the average of their actual salaries by $2,264 a year; for Research Universities I that predicted-actual differential is $2,729. On the basis of the male regression equation, the predicted average for female faculty in all institutions is

---

Granting Universities I and II are three categories that awarded at least 50, 40, and 10 Ph.D's, respectively, in 1969–70, and in the case of Research Universities II are on the list of the 100 leading institutions in terms of federal financial support. The three categories total 121 institutions. Comprehensive Universities and Colleges I and II are 453 institutions that offer liberal arts programs, have one or more professional or occupational programs, and may offer master's degrees. For more detail on these categories see Carnegie Commission (1973*a*).

[36] It is interesting to observe that the Astin and Bayer study (1973, pp. 350–351), using the same 1969 data and similar statistical methods, seems to contradict these conclusions with respect to the significance of the three variables as stated in the text.

$1,407 above the actual salary; for Research Universities I, the predicted average for women is $2,009 above the actual average. The predicted-actual differences are largest in dollar terms for Research Universities I of any of the six categories of institutions and are smallest for Comprehensive Universities and Colleges. Indeed, for Research Universities I for the biological and physical sciences, the difference between the predicted and actual average salaries is most surprising. In those sciences, a great majority of the male faculty received salaries in 1969 that ranged roughly from $1,000 to $7,500 above the predicted salaries on the basis of the female regression equation, and slightly under 10 percent of the male faculty in those sciences received salaries $10,000 to $13,000 above the predicted amounts (Carnegie Commission, 1973*b*, p. 116 and Chart 14, p. 117). In considering the magnitude of those differentials, one should bear in mind the average salary figures for university faculty in the 1968–69 salary survey of the American Association of University Professors; they ranged from an average of $10,534 for assistant professors to an average of $17,000 for full professors ("The Threat of Inflationary Erosion," 1969, Appendix Table 5, p. 208).

Questions can be raised about the validity of the predicted salaries themselves, and the soundness of their use for assessing actual responsibility for discrimination. Those aspects will be considered after attention is given to the Astin-Bayer study that uses the same basic data and similar methods of analysis.

Before considering the Astin-Bayer study it should be mentioned that Scott also compared differences in faculty salaries associated with race by a similar method. There was a slight tendency for the predicted average salary of black male faculty to be above the actual average, on the basis of the equation for all men, and a slight tendency for the predicted average salary of black women to be slightly below the average actual salary for female faculty, on the basis of the equation for all women. But the differences are not statistically significant (Carnegie Commission, 1973*b*, pp. 209 and 224).

The Astin-Bayer study uses multiple-regression analysis to predict salaries of male faculty compared with female faculty and also to make similar predictions with respect to academic rank and tenure. Instead of using the regression equation of the opposite sex, Astin and Bayer apply to the women's data the regression weights of the predictor variables calculated from the men's sample.

The difference between actual average salary and predicted average salary for women for the whole sample is $1,040—actual salary averaged that much less than predicted salary (Astin & Bayer, 1973, p. 353). The authors say that it is a minimum figure because the regression weights of the predictor variables for the male sample are used, and the result does not include salary discrimination attributable to discrimination in rank. Astin and Bayer do not provide breakdowns by disciplinary areas or type of institution.

With respect to both the Scott and Astin-Bayer studies it should be pointed out that the use of large numbers of predictor variables as a basis for judging the existence and extent of sex discrimination in salary is subject to serious weaknesses. Only quantifiable aspects of each variable are included in the analysis. Unmeasurable, quality aspects of teaching, research and publications, and administrative service, although usually important in determining an individual's "productivity," tend to be neglected. Scheduled teaching hours are not all equal, as Scott clearly recognizes. Successful teaching of advanced courses and lecturing to large numbers of undergraduates in a rapidly changing field are more demanding in terms of scarce competencies than teaching sections in an elementary course, year after year. The former is more likely to be done by men, the latter by women in some departments.

Qualitative differences that affect productivity can be illustrated by examples. In many universities, a significant part of the instruction in courses in non-Western languages is given by native-speaking persons, mostly women. Some of them may ultimately earn a Ph.D. degree but still be qualified mostly for language teaching and not for advanced courses in literature or history. Their teaching per hour cannot be considered equal to that of a distinguished professor in the literature or history of the country where that language is the native tongue. Also Astin and Bayer make no allowance for part-time as distinguished from full-time teaching although, for reasons indicated in the Johnson-Stafford paper, part-time service may have important implications for salary in future years.[37]

[37] Briefly, the reason is that inclusion in the analysis of part-time service years as years of experience can be misleading if the rest of the person's time while on part-time teaching was occupied with nonprofessional activities, which means a decline or interruption in the development of professional skills and reputation that influence "productivity" and earnings.

P

Furthermore, it is noteworthy that neither Scott nor Astin-Bayer compare the salaries of single women and male faculty. As already explained, the pattern of advancement in rank and salary for single women resembles that for men and presumably would show little sex differences in salary.

Certainly, one cannot assume that 30 predictor variables can serve to predict the average salary that women would be paid if there were no sex discrimination in salary determination on the part of institutions of higher education. The difference between the predicted average salary and the actual salary of female faculty in the two studies is in the nature of a residual still to be explained. At least part of that residual could be due to weaknesses in the predictor variables or to sex differences in productivity factors (e.g., career motivation, ability to perform demanding teaching assignments, standing in the discipline and the profession) not taken into account in the analysis.

It should be noted that analyses of faculty salaries by sex made in individual major universities, some in field investigations under the Federal Equal Pay Act, generally do not find a "pervasive pattern" of lower salaries for female faculty of the magnitude indicated by the Scott and Astin-Bayer calculations and especially by Scott's calculations for biological and physical sciences in major universities, where laboratory research contributions (often with graduate students) are such an important factor in academic reputation and in faculty salary determination. Faculty salary studies by individual institution (microeconomic case studies)[38] are likely to provide much more reliable results than macro-type analyses based on the use of many predictor variables.

The Johnson-Stafford study analyzes factors that may explain much of the differential in faculty salaries between men and women. Their analysis is based mainly on data from the National Register of Scientific and Technical Personnel for 1970.[39] Six disciplines are chosen for particular examination. They are anthropology, biology, economics, mathematics, physics, and sociology.

Johnson and Stafford point out that salary data for the first academic appointment after completing the Ph.D. degree show comparatively small differences by sex in most of the disciplines. At that point, the average differential between men's and women's salaries in academia ranged from women's salaries 4 to 8 percent lower in five disciplines to 12 percent lower in biology.

---

[38] For such a microeconomic case study, see Malkiel and Malkiel (1973).

[39] Source of data: Tapes of the National Register of Scientific and Technical Personnel, National Science Foundation.

For all six disciplines, the percentage differential between male and female salaries widens during the first 20 years of experience after acquiring the Ph.D. degree. During those 20 years, the sex differential widened for the six disciplines as follows: anthropology, 8 to 23 percent; biology, 11 to 26 percent; economics, 5 to 15 percent; mathematics, 6 to 26 percent; physics, 6 to 22 percent; and sociology, 4 to 14 percent. The salary differential widened most rapidly between the fifth and fifteenth years of postdoctoral and professional experience. Generally, during those 10 years the women were between 35 and 45 years of age, when they were most likely to have heavy household and child-care responsibilities.

Johnson and Stafford also made an analysis of salaries and experience of faculty members who, in 1972, were assistant, associate, and full professors at Michigan State University in the six disciplines. They found that the starting salaries for the female faculty in those disciplines averaged only 3 percent lower than corresponding salaries for male faculty, and that figure does not have much statistical significance. At 15 years of reported academic experience, the differential had grown to 20 percent, and thereafter it declined somewhat with more years of experience above 15.

The National Register data also show a narrowing of the sex differential in half of the six disciplines after a certain period of experience. Classifying experience by five-year intervals up to 30 years, the sex salary-differential is largest in percentage terms at 20 years for economics and physics, at 25 years for sociology, and at 30 years for anthropology, biology, and mathematics. In other words, in the first three disciplines the sex differential for salaries narrowed somewhat (1, 2, or 3 percentage points) after 20 or 25 years of experience; in the other three disciplines the sex differential continued to enlarge a few percentage points up to the thirtieth year of experience, the final year included in the analysis.

The changes in the size of the sex salary-differential over time are explained by Johnson and Stafford largely in terms of difference in time devoted to improving earning capacity—investment in "human capital." They point out that, at the time of completion of the Ph.D., the earning capacity and the learning ability of males and females are approximately equal, and so are their salaries. Thereafter, however, married women, in general, are not likely to devote as much time and effort to increasing their earning capacity and preventing its obsolescence as is generally the case for male faculty, especially during the first 15 years of their academic careers.

Two factors help to explain a significant divergence in women's capacity or "productivity" as teacher-scholars after starting with no apparent overall difference in career preparation and capacity at the point of Ph.D. completion. One is the individual's expectation that she will have a period when family obligations will necessarily cause some curtailment of time and effort that she can devote to professional development. That expectation tends to affect women's career aims, motivation, and planning. Two, a woman's job preferences and her stress on job components may favor teaching (drawing heavily on existing stock of "human capital" from previous training, which may experience significant obsolescence) and put less emphasis on research (that helps to develop and renew the teacher-scholar's capital, not only through the results of the research but also the process of interchange with teacher-scholars in the field concerning that research and research results of others in the field). Less time and effort are actually devoted to research and scholarship, which keep one intellectually alive and on top of one's subject, because so much time and attention, during a vital period for progress in one's profession, are taken up with family and household duties. Assessment of the value of the individual as a teacher-scholar by colleagues in the university and by persons in the discipline at other institutions is affected by a relative decline in the individual's "human capital" as a faculty member in the discipline. That is likely to influence recommendations for salary increase and promotion that are based on merit, and also the number and salary of outside job inquiries and offers.

The first 10 years after completing the Ph.D. requirements are especially important for progress in a career as a teacher-scholar in the arts and sciences. That is particularly true for laboratory sciences like the biological sciences, in which the reputation of teacher-scholars depends so heavily on instruction of advanced students in the laboratory and on the quality of one's research contributions. Competition is keen in those terms, and obsolescence of knowledge is quite rapid in most subject areas.

The Johnson-Stafford study indicates additional dangers in drawing conclusions about sex discrimination from cross-sectional studies that neglect differences in the rate of individual professional development over time. Studies of sex discrimination in university salaries and conclusions drawn from them about discrimination should take account of factors that influence the value of the individual as a teacher-scholar to the particular institution.

The material in this chapter shows the complications and pitfalls that attend attempts to calculate the amount of discrimination in faculty employment for which universities can be assigned the responsibility. A full analysis of the supply side should be a major element in any such calculation. The above material also indicates that numerical goals for a university's hiring of female and black faculty in particular fields, based on separate "pools" (by sex and race) of persons assumed to be qualified, can be significantly biased by incorrect estimates of qualified supply. That subject is treated in the next two chapters.

The data in this chapter show why a significant part of government affirmative action programs should be directed at improvement in the quality of supply of women and members of minorities for faculty appointments, especially in the upper reaches of the academic world. There can be no doubt that affirmative action efforts on the supply side are a necessary part of lasting improvement in the utilization of the talents of members of minorities and women as teacher-scholars in universities.

4. *Federal Guidelines for Faculty Employment*

This chapter and the next analyze the comprehensive federal scheme of regulation, developed under Executive orders and administrative rulings and designed to assure compliance by federal contractors (including universities holding research contracts) with the requirements in those orders and rulings. These two chapters will critically examine the labor market assumptions on which the enforcement requirements are based.

This chapter discusses the development by HEW of a set of guidelines for universities to follow in constructing and complying with their affirmative action plans and examines the special "availability-utilization" analysis that HEW requires universities to use to measure the extent of their alleged discrimination. Chapter 5 takes up various aspects of goal setting and goal enforcement and different kinds of affirmative action goals.

THE DEVELOPMENT OF HIGHER EDUCATION GUIDELINES

An indication at the outset of certain governmental features of the comprehensive scheme of regulation under Executive Order No. 11246 for federal contractors may help in understanding recent developments under the order and its application to universities.

As explained in Chapter 1, the contractor compliance scheme was developed in the Department of Labor, with HEW serving as the enforcement agency for universities and colleges. The scheme has been established and developed by Executive order, without Congressional consideration or endorsement. It is enforced exclusively by administrative-agency action. The penalty for noncompliance takes the form of withdrawal of part or all of the contractor's eligibility for federal contracts. Government regulation under Executive Order No. 11246 is separate from and in addition to, the fairly comprehensive, legislatively established programs for attacking employment discrimination discussed in Chapter 1.

As federal contractors, the major universities of this country, both public and private, are subject to Executive Order No. 11246 and to Executive Order No. 11375, which added "sex" to the protected categories. The faculties of the major universities (which include most of the top natural scientists, life scientists, social scientists, and humanities scholars in this country) and the positions they hold are subject to the rules and requirements of the applicable provisions of those Executive orders dealing with the employment, advancement, and compensation of workers.

Executive Order No. 11246 provides that all contractors must agree to abide by the following provision in all parts of their operations during the performance of such a contract:

> (1) The contractor will not discriminate against any employee or applicant for employment because of race, color, religion, sex, or national origin. The contractor will take affirmative action to ensure that applicants are employed, and that employees are treated during employment, without regard to their race, color, religion, sex, or national origin.

Clearly, under that nondiscrimination clause, a university contractor must not discriminate either against or in favor of members of minority groups, women, or white males. There must be equal employment opportunity for each and every individual regardless of his or her race, color, religion, sex, or ethnic origin. Nevertheless, some provisions of the HEW Guidelines and some enforcement of the guidelines and regulations issued under Executive Order No. 11246 are not fully consistent with that provision.

Executive Order No. 11246 gives the Secretary of Labor the power to adopt rules, regulations, and orders as he deems necessary and appropriate to achieve the objectives of, and compliance with, that order. In that connection, the development of the notion of affirmative action under the Department of Labor's regulations is of interest. In the May 1968 regulation (Code of Federal Regulations, Title 41, Chapter 60-1), the kinds of affirmative actions specified were: to post the required statement of nondiscrimination in conspicuous places, to include it in all solicitations and advertisements for employees, and to notify any collective bargaining agent of the contractor's agreement not to discriminate. Provision was made for enforcement through the contractor furnishing information and reports and through investigation by the Department of Labor (or the appropriate federal agency designated by the Department of Labor) to ascertain compliance with the Executive order and with the rules, regulations, and relevant orders of the Secretary of Labor. If the investigation should reveal any lack of compliance (termed *deficiencies*), the contractor was (and still is) required to make a commitment to correct such deficiencies before the contractor can be found to be in compliance with the Executive order and, therefore, an eligible bidder on federal contracts.

On December 4, 1971, the Secretary of Labor added a whole new set of requirements for compliance. They provided that each federal contractor[1] in any line of activity must develop a written affirmative action program and must do so according to certain especially developed techniques. For determining deficiencies in the employment of women and minority-group members, the contractor must use a prescribed statistical method for calculating available and qualified supply for each job classification.[2] As we shall see, the method, though perhaps usable and appropriate for jobs requiring manual qualifications and skills, is inappropriate for quite individualized positions that require rare combinations of qualities, such as is the case for most tenure positions at major universities.

The contractor, using the prescribed statistical method, is required to calculate his deficiencies in numbers for women and members of minorities for each job classification, and to set forth specific hiring goals for women and members of minorities, in numerical terms and with hiring timetables attached to the numbers. Those numerical hiring goals, supposedly designed to remedy the calculated deficiencies, are not absolute commitments but are to be pursued by the contractor "applying every good faith effort to make all aspects of [his] affirmative action program work."

Strict adherence to proper rules and procedures to ensure that women and members of minorities are widely encouraged to apply for any job openings and are given equal opportunity for employment, training, promotion, and fair compensation no longer sufficed to meet compliance requirements. The additional concepts, method of determining and measuring discrimination, and other added requirements for compliance are embodied in a new Part 60-2 of Chapter 60 of Title 41 of the Code of Federal Regulations, commonly referred to as Revised Order No. 4.[3]

---

[1] Specifically, each contractor or subcontractor with a federal contract of $50,000 or more and 50 or more employees. Public institutions and agencies with federal contracts were required to have written affirmative action plans beginning October 4, 1972.

[2] Job classification "meaning one or a group of jobs having similar content, wage rates, and opportunities"—a vague and unsatisfactory definition.

The methodological and goal requirements contained in Revised Order No. 4 were devised by the Department of Labor for more rapid and effective elimination of race discrimination in the building trades. The order spread that elaborate system to industry in general.

As the federal "administering agency" to enforce compliance by universities and colleges with the Executive orders and Revised Order No. 4, HEW had the task of making the rule modifications and adaptations necessary and desirable to fit the special characteristics and circumstances of the 900-odd institutions of higher education covered by those orders. In addition, the 10 regional offices were making inconsistent rulings and questionable interpretations in a way that caused great concern among universities. It had become clear by early 1972 that some written guidelines, rules, and interpretations of orders and regulations as applied to universities were badly needed.

After repeated delays, at the end of July 1972 a 100-page draft of guidelines for the application of the Executive orders and Revised Order No. 4 to institutions of higher education was prepared and sent to some two dozen university officials for their personal review and their comment by mid-August, as it was hoped that a guidelines document could be published by the opening of the academic year in September.

The 100-page draft was a most disturbing document. Written in a rather accusatory and involved manner, it added a set of new requirements not in any previous orders and rulings,[4] which would have involved considerable HEW intrusion into the internal affairs of universities—into educational policy and internal administration as well as employment practices. It was quite evident that those in authority in HEW's Office for Civil Rights had insufficient understanding of, or experience in, the operation of universities.

---

[3] See *Federal Register* (1971*b*).

[4] For example, five pages were devoted to some 14 "principles" (really mostly practices) for the handling of employee complaints or grievances. Some of those principles were clearly unsound and inconsistent with accepted practice in industrial relations. Presented as a single set of conflict-resolution procedures to handle any complaint (whether related to proscribed discrimination in employment or not), they provided that every grievance should be heard by a committee containing representation of women and minority groups, that the grievant should have the right of access to any file he or she deemed necessary in connection with the complaint (presumably including the private files of faculty colleagues), that there should be a formal transcript or recording of the proceedings, and that the institution would be bound to accept whatever

Some of the university officials who had received the document presented to the appropriate officials in the Department of Labor their strong objections to parts of the HEW draft. The Director of Federal Contract Compliance in the Department of Labor has to approve any regulations, directives, or orders to be issued by a federal agency to which the Department of Labor has delegated compliance authority under Executive Order No. 11246 and Revised Order No. 4.[5]

The Department of Labor officials, recognizing that the 100-page draft was unnecessarily detailed, ambiguous, and intrusive, instructed HEW to develop a new draft cut down perhaps to one-third the size, tightly organized and objectively written. It was suggested that misconceptions such as were contained in the 100-page document could be avoided if HEW had available for consultation an advisory panel of persons well versed in the actual operations of institutions of higher education. This idea seemed to find some support in the Department of Labor but has not been used by HEW.

Without any further consultation with persons in the colleges or universities, HEW issued its guidelines in October 1972. For the most part, these guidelines follow the specifications stated by the Department of Labor. They are based on Revised Order No. 4, adopting, without much adaptation, its methodology and its scheme for determining numerical goals.

---

decision such a grievance committee might make but the grievant had no obligation whatsoever to accept a committee decision. Although there is presumably no obligation for an institution to adopt any such grievance procedures under the Executive orders or Revised Order No. 4, the draft stated that the absence of such a grievance procedure "may be viewed by the Office for Civil Rights in the context of a review or investigation as evidence of a contractor's intention not to act affirmatively to eliminate discrimination prohibited by the executive order."

[5] The pertinent provision in Chapter 60 of Title 41 of the Code of Federal Regulations [60-1.6(c)] reads as follows: "*Agency regulations.* The head of each agency shall prescribe regulations for the administration of the order and the regulations in his part. Agency regulations, directives and orders for such purpose must be submitted to the Director prior to issuance and may be enforced upon approval of the Director or 60 days after submission if not disapproved by the Director" (*Federal Register,* 1971*b*).

The final HEW Guidelines issued in October do embody some improvements. The procedures for notification and conduct of on-site compliance investigations, for noncompliance determinations, and for hearings are more reasonable, but difficult issues (such as federal agency access to and use of confidential letters of evaluation of faculty members by prominent scholars in the field) remain unresolved. Provision seems to be made in the following statement for numerical hiring goals on a broad enough basis for the statistical law of averages to have some application: "In many institutions the appropriate unit for goals is the school or division (e.g., of humanities departments, social science departments, natural science departments) rather than the department" (Office for Civil Rights, 1972, p. J5). However, some regional offices have been insisting on hiring goals by academic department almost as though that statement did not exist.

The guidelines do seem to recognize that preferential treatment in the selection of faculty according to race, sex, religion, or national origin constitutes discrimination in violation of Executive Order No. 11246. However, the issue is confused by an extreme, untypical example. The guidelines' wording is as follows:

> In the area of academic appointments, a nondiscriminatory selection process does not mean that an institution should indulge in "reverse discrimination" or "preferred treatment" which leads to the selection of unqualified persons over qualified ones. Indeed to take such action on grounds of race, ethnicity, sex or religion constitutes discrimination in violation of the Executive Order (ibid., p. 8).

Of course, the appropriate example would be the more typical case of the hiring of a less-qualified person over a better-qualified person on grounds of sex, race, or other group or class affiliation in order to meet numerical goals.

The HEW Guidelines do not attempt to reconcile the conflicting aims of nondiscrimination and equal employment opportunity on the one hand and insistence on hiring of substantially more women and members of minorities to achieve proportional representation according to numerical hiring goals on the other. That dilemma puts universities in a difficult position. Section 703(j) of Title VII of the Civil Rights Act of 1964, which has applied to institutions of higher education since March 24, 1972, reads as follows:

1077

> Nothing contained in this title shall be interpreted to require an employer . . . to grant preferential treatment to any individual or to any group because of the race, color, religion, sex, or national origin of such individual or group on account of an imbalance which may exist with respect to the total number or percentage of persons of any race, color, religion, sex, or national origin employed by an employer . . . in comparison with the total number or percentage of such race, color, religion, sex, or national origin in any community, state, section, or other area, or in the available work force in any community, state, section, or other area.

Chief Justice Burger, speaking for the majority of the U.S. Supreme Court in *Griggs v. Duke Power* (1971) declared that under Title VII, "Discriminatory preference for any group, minority or majority, is precisely and only what Congress has proscribed." The Court went on to support individual merit as the basis for selection and reward, declaring: "Congress has not commanded that the less qualified be preferred over the better qualified simply because of minority origins. Far from disparaging job qualifications, Congress has made such qualifications the controlling factor, so that race, religion, nationality, and sex become irrelevant."

"AVAILABILITY ANALYSIS" FOR MEASURING DISCRIMINATION

The HEW Guidelines instruct universities and colleges how to determine whether women and minority persons are "underutilized," and therefore, discriminated against "in any job classification or organizational unit" (Office for Civil Rights, 1972, pp. J1 to J5). The guidelines assume that each academic rank (e.g., professor, associate professor, assistant professor) is a separate job classification.

Referring to the "required analysis" as "a unique aspect of equal employment opportunity under the Executive Order," the guidelines recognize that there are problems in applying the "analysis" to "academic personnel" because "the recruiting area will vary from institution to institution" and "may be a national or even international one," and because "the skills required for a particular position are often quite specialized" so that "accurate information on availability may be more difficult to obtain."

The guidelines state that "for academic employees the basic national data on earned doctoral degrees will provide the basis for a utilization analysis of the contractor's work force, unless the contractor can otherwise demonstrate that the labor market upon which it draws is significantly different from this base." With respect to tenured faculty, the guidelines state: "To determine the number of women available for senior positions, the Office [for Civil Rights of HEW] recommends that the contractor use data available from the National Register of Scientific and Technical Personnel prepared by the National Science Foundation, and the U.S. Office of Education's annual reports on earned degrees" – presumably Ph.D. degrees – for university positions.[6]

Each university must compare, "by comparable job categories," "the number of women and minorities in its current workforce" with their estimated availability according to "availability analysis." "Wherever the comparison reveals that a hiring unit of the university (a department or section) is not employing minorities and women to the extent that they are available and qualified for work, it is then required to set" numerical hiring goals to overcome any such "deficiencies in the utilization of minorities and women."

The availability-utilization analysis is obviously a kind of supply-demand analysis, which assumes that nondiscrimination will always result in a university employing women and members of minorities in each "job category" and each "hiring unit" in exact proportion to their representation in the supply that is qualified for the demand. Such a statistical technique should, therefore, be applied only after a thorough analysis of the various qualifications that supply must have for particular faculty positions and a similar thorough analysis of the requirements for the faculty positions – the demand. Otherwise, any disproportions between calculated "utilization" and actual "utilization" may just be mistakes in the numbers used and not evidence of discrimination for which the university is alone responsible and which nondiscrimination on the part of the university would eliminate.

From various statements in the guidelines, it is obvious that the HEW enforcement staff have not made any careful analysis of qualified supply for different faculty positions in different disciplines. For example, repeatedly in the guidelines, the absence of women or members of minorities in an academic department is referred to as "exclusion" on the part of the institutions and as a "deficiency" (meaning discrimination by the institution), regardless of the amount of fully qualified supply of women or blacks actually available for each of the faculty positions in that discipline or department.

---

[6] In any year, probably the sex representation among the top 10 percent of Ph.D. recipients in the country is about the same as that for all other Ph.D. recipients that year. However, there certainly could be a difference between the proportion of women in the top 10 percent and in the other 90 percent of Ph.D. recipients in particular disciplines and subfields of disciplines (e.g., theoretical and applied branches of a subject). It would be extremely difficult and quite costly for each major university to try to determine whether such differences actually exist for each subfield and each discipline and to do so in terms of the qualifications for particular faculty positions at that institution. More on this subject anon.

HEW avoids responsibility by requiring the universities themselves to make numerical estimates of their so-called deficiencies according to the prescribed technique, even though proper data may not be obtainable or the technique cannot properly be applied to some or all faculty positions in a particular department. However, if the university, using the technique with inadequate data, comes up with no deficiency or an exceedingly small one (a fraction of a person less than half),[7] the HEW compliance officials may refuse to approve the university's affirmative action plan on the grounds that the technique was not properly applied and that some specific hiring goals for such departments have to be included in the plan. The only appeal from such a decision presumably is higher up in the executive branch of the federal government. Persons in the federal government could hardly be sufficiently informed and expert to decide what the proper hiring goals at various faculty ranks in all disciplines in a particular university should be. Yet the staffs of HEW regional offices, who lack such expertise, negotiate with universities and approve or disapprove submitted affirmative action plans required to contain such goals. Under the circumstances, it is not surprising that they make a variety of "demands" on universities that go far beyond numerical goals.

THE INAPPROPRIATENESS OF "AVAILABILITY ANALYSIS"

From the analysis of supply and of demand for tenure positions in major universities set forth in Chapters 2 and 3, it is evident that the required "availability-utilization" technique cannot properly be applied to most tenure positions in such institutions. That technique, and the assumptions on which it is based, just will not provide proper answers about discrimination and proportional representation, given the facts of the situation. And to derive numerical goals by such a technique and to enforce compliance with them for the tenured faculty is almost bound to create some demand discrimination in faculty employment.

---

[7] Such a result is likely in many disciplines, since blacks apparently hold no more than 1 percent of all Ph.D. degrees (Bryant, 1969) and since in particular disciplines women earned the following percentages of the Ph.D. degrees granted during the decade of the 1960s: engineering, 0.4 percent; physics, 2.0 percent; geology, 2.5 percent; business and commerce, 2.8 percent; religion in liberal arts, 4.5 percent; economics, 5.6 percent; mathematics, 6.5 percent; chemistry and statistics, 6.8 percent. The average size of academic departments in the arts and sciences at major private universities seems to be between 15 and 20 regular faculty.

The reasons that the technique is so unsuitable for the situation can be briefly explained by drawing on the conclusions in Chapters 2 and 3.

Dealing first with the supply side, it has been explained that great variation exists in the mental and other personal qualities that are basic considerations in faculty appointment in major universities: (1) teaching ability at various levels and by various methods in particular specialties, (2) ability to produce important research contributions and to make teaching and research mutually reinforcing, and (3) ability to contribute constructively to the career development of colleagues and to the effective operation of one's department and the university (collegial and managerial contributions).

The requisite qualifications for appointment to tenure are likely to be possessed by fewer and fewer persons (1) the higher the level of excellence of a university and (2) the rarer the qualities (including training) necessary for advanced teaching and scholarship in the specialty. That explains why the number of qualified persons anywhere in the world for particular tenure appointments at a distinguished American university are generally very small.

On top of that, the supply configuration for married women, in contrast to that for men and single women, generally is a pyramid that falls off sharply at the upper levels of tenure positions for major universities. Presumably that configuration for married women should be taken into account in any availability-utilization analysis.

As was noted in Chapter 3, qualified supply for tenured faculty positions in universities usually is specified in terms of a subfield or a combination of two subfields of the discipline. In an economics department, for example, the subfields might include the following 13: microeconomic theory, macroeconomic theory, econometrics, economic development and growth, economic history, industrial organization and price policy, international economics, labor economics, mathematical economics, money and financial institutions, public finance, urban economics, and centrally planned economies.

An economics department might have 30 to 35 faculty (say, two-thirds with tenure) distributed among those 13 subfields. Even within subfields, there is further specialization. A faculty position in international economics might stress specialization in international-trade theory, or commercial policy, or international finance, or international investment and foreign aid. A faculty position in labor economics might stress labor markets including wage theory, labor relations including unions, or manpower training and development. For a tenure opening in international-trade theory, persons in the other three specialties in the subfield would not be likely to qualify. For an opening in labor economics stressing theory, specialists in labor relations or manpower would not be likely to qualify. Thus, a proper availability analysis would, in most instances, need to be made on the basis of specialties within subfields within departments.

Where the number of women or blacks considered qualified for tenure in a department of a major university is quite small and that small number is scattered among several subfields, the use of availability analysis becomes exceedingly dubious. For instance, faculty in top-ranked mathematics departments, in connection with developing affirmative action plans, have stated that no more than one or possibly two female mathematicians in this country could at this time, on the basis of scholarly qualifications, be offered a tenure post in one of the top dozen mathematics departments. Similarly, in trying to apply availability analysis, the number of female economists considered by faculty in leading departments to be qualified for appointment to a tenure opening in one of the top dozen economics departments has been variously given as between 9 and 12, distributed among more than half a dozen subfields. Corresponding figures for blacks would apparently be none in mathematics and 4 or 5 in economics.[8]

With such small numbers and with tenure positions coming open on the average perhaps every 15 or 20 years (turnover of tenured faculty recently seems to have been averaging around 3 or 4 percent), the purpose to be served by requiring each economics department in major universities now to apply the required "availability" analysis and come up with numerical goals for women and black economists by department, making allowance for subfields, is unclear—unless it is to stimulate bidding for the female and black economists, several of whom have had all kinds of offers and do not seem to be movable. It is even more questionable to require the top mathematics departments to engage in the required analysis and to set numerical hiring goals for women and blacks for any tenure opening that may occur in one of a number of subfields as a result of death, retirement, or interinstitutional movement of faculty.

---

[8] In view of the numbers of nontenured female faculty, particularly in economics, these numbers can be expected to increase somewhat over the next five years.

Under such circumstances, the prescribed "availability" analysis clearly does not measure discrimination in demand by a particular department. It is difficult to know just what it would measure.

To make a somewhat meaningful estimate of the qualified, available supply for all tenure positions at major institutions is a difficult task, even assuming a significant range for error. The academic departments in the arts and sciences at major institutions may average around 35 in number. The number of subfields per department may average 7 or 8.[9] Disregarding the need in many cases to take account of specialties in subfields, that could mean some 700 to 800 estimates (35 × 7 × 3—one for total number and one each for women and members of minorities, in the subfield). That quantity of estimates would be required, say, for 400 tenure positions in a total full-time faculty of perhaps 650. Separate estimates for tenured and nontenured faculty would seem necessary and would double the number of estimates in each case. Persons qualified for a nontenure appointment generally would not be qualified for a tenure appointment.

In addition to the large numbers of estimates needed and the conceptual problems, there is another complication. "Minorities" is an ambiguous, quite heterogeneous category consisting of "Negroes, Spanish-surnamed, American Indians, and Orientals." "Spanish-surnamed" includes Puerto Ricans, Cubans, Mexican-Americans, and descendants of Spanish immigrants—how far back and in what ratio of Spanish blood is unclear. Orientals are well represented in tenure positions in major universities, not only in positions in Chinese and Japanese art, literature, history, and politics but also in the distinguished mathematics, physics, economics, and engineering departments. Separate estimates presumably should be made, at least for some of the constituent minority groups; a single estimate for all of them combined may have little meaning for the question of discrimination.

---

[9] History has perhaps the most subfields of any discipline with at least three types of limiting criteria for each position: (1) country or geographic area, (2) chronological period, and (3) special subject matter—diplomatic, political, cultural, intellectual, art, economic, urban, etc.

Although availability analysis may be inappropriate and biasing for tenured faculty, it can have some validity and usefulness for application to the large numbers finishing their Ph.D. requirements and seeking term appointments as assistant professor or instructor. In a sense there is a labor market for the new Ph.D. recipients who seek appointment each year to instructorships and assistant professorships. In this country, some 18,000 to 20,000 Ph.D. degrees are earned annually by graduate students in the sciences, the social sciences, and the humanities. As explained in Chapter 2, most of them seek academic appointments early in the calendar year in which they plan to complete their Ph.D. training. A relatively high turnover in instructorships and assistant professorships is characteristic of major universities. On the average probably 15 to 20 percent of their assistant professorships become open each year compared with a figure of around 3 or 4 percent for tenure positions.

The supply of new Ph.D.'s coming on the market each year is, of course, differentiated in many important respects. They include intellectual capacity, quality of graduate training, field and subfield of study, probable abilities in teaching, potential for significant research, gifts for academic administration, etc. Nevertheless, one would expect that at that point in career development, there would be no significant sex differential in ability and potential as teacher-scholars. In other words, one would assume that the top 10 percent in qualifications (appropriately measured) should be distributed by sex in about the same ratio as the next 25 percent of all new Ph.D.'s. The same sex ratio might not hold, however, for (say) the top 10 percent in a discipline, particularly one in which women earn relatively few Ph.D.'s, such as astrophysics, economics, various branches of engineering, geology, mathematics, and physics. On the other hand, the proportion of women in the top 10 percent of the new Ph.D.'s in English and certain foreign languages and literatures might be relatively high. Also, one could expect some deviation from the overall sex ratio in certain subfields, partly perhaps in terms of their degree of abstraction. Indeed, although differentiation by subfield is generally not very far along at the time of Ph.D. completion, such differentiation can make the assumption of normal sex distribution of talent and training for individual subfields very questionable. The case for stating a numerical hiring goal for, say, three similar disciplines combined instead of one, rests in good part on the likelihood of unusual supply conditions with respect to some particular openings.

Despite such problems, material presented above shows that differentiation and specialization on the supply side are much greater five or seven years after receipt of the Ph.D. degree. For that reason, properly based, numerical hiring goals for faculty of major institutions are more appropriate at the new Ph.D. level than they are at a later stage in faculty careers.

The characteristics of demand for faculty at the new Ph.D. stage are likely to fit with the supply characteristics in a higher percentage of cases than is true at later career stages. Partly that is because there is apt to be less differentiation on both sides of the market at the new assistant professor stage. The demand for new assistant professors is likely to involve considerable teaching in elementary courses and over a wider range of subfields, since the candidates will have just completed their graduate training and recently taken their general examinations. The demand by academic institutions is, of course, also concentrated heavily in the early months of the calendar year, and the numbers of candidates considered fully qualified for assistant professorships in major universities is generally much larger than is true for tenure openings.

Consideration of the difficulties with the prescribed availability analysis and analysis of supply-and-demand conditions in this chapter provide a basis for examination of government-required hiring goals for university faculty—the subject of the next chapter.

5. *Affirmative Action Goals for Faculty*

The federal government's current program to eliminate bias in university employment through federal contract regulation rests mainly on numerical hiring goals[1] and schedules ("timetables") for fulfillment of the goals. As applied to major universities, the scheme of goal requirements raises such troublesome questions as the following:

1 What notions concerning the causes and cures for race and sex bias in faculty employment underlie HEW's scheme of numerical goals with timetables?

2 To what extent is "proportional representation" by sex, race, or religion a soundly conceived goal for faculty employment, both tenure and nontenure?

3 To what extent will numerical goals derived by the prescribed method and negotiated with HEW lead to inflated goals that can only be met by giving some women and minority-group members preference in hiring, promotion, and/or salary?

4 What provisions are there in the present HEW scheme to determine whether the numerical goals universities have actually set are too high in some disciplines for some ranks?

5 To what extent will inflated goals and pressures for their achievement create new, additional discrimination and tend to develop a two-standard faculty?

---

[1] They really are hiring and promotion goals, since HEW has, in some cases, not only asked universities for the number of hires but also required that the goals include "the projected overall composition of the faculty in the unit"—in other words, the sex and race composition of the department one, two, three, or more years hence by rank.

6 What are the effects of numerical hiring and promotion goals on the integrity of departmental and university arrangements for determining appointment, promotion, and salary on the basis of merit?

7 If a particular academic department should fail to meet its numerical hiring goal, should sanctions be imposed on the department and its individual members, or would such sanctions be unjust and violate individuals' academic rights and academic freedom?

8 What attention and weight should be given to other goals such as improving the quality of supply or achieving "diversity" in the faculty?

Those questions will be taken up in order, after a brief look at directive statements concerning numerical goals and timetables in Revised Order No. 4, which is the basic document.

Federal contractors covered by that order are required to conduct "availability analyses" both to measure disproportionality (that is, discrimination on the demand side) and to determine the precise numbers, as goals for hiring, that a contractor must adopt. To quote again from the order:

> An acceptable affirmative action program must include an analysis of areas within which the contractor is deficient in the utilization of minority groups and women, and further, goals and timetables to which the contractor's good faith efforts must be directed to correct the deficiencies and thus to increase materially the utilization of minorities and women, at all levels and in all segments of his work force where deficiencies exist.

It is further stated that "goals should be specific for planned results, with timetables for completion," and "must be targets reasonably attainable by means of applying every good faith effort to make all aspects of the entire affirmative action program work."

Those statements contain four significant facts about the mandatory numerical goals in affirmative action plans. One, such goals are based entirely on availability analysis and, therefore, raise all the questions that such analysis raises and are invalid to the extent that that analysis is invalid. Two, numerical goals take the supply side as given and assume that the demand side is responsible for any "deficiencies" (discrimination) and that the demand side must, therefore, take the affirmative actions through the hiring and promotion of members of minorities and women. Three, numerical goals assume that proportional representation, as measured by availability analysis, is the norm for all sections of university faculties and that proportional representation for women and minority groups would exist throughout a faculty if there were no discrimination on the demand side. Four, the goal setting and timetables are in terms of actual hires; they are result-oriented instead of process-oriented, with no account taken by the enforcement agency (HEW for higher education) of their discrimination-creating potential. Specifically, all the pressures and incentives are directed toward achieving a particular number of women and members of minorities among the new hires.

BASIS FOR HEW-PRESCRIBED GOALS

In placing primary emphasis on goal making by colleges and universities, the HEW Guidelines assume that most of the responsibility for race or sex bias in faculties of universities and colleges rests on the demand side. The primacy of goal making and goal enforcement also assumes that race and sex bias in faculties can be largely overcome through government pressures to achieve certain quantities of appointments and promotions for women and blacks and members of other minorities.

As material already presented has indicated, those assumptions are not well founded. In many disciplines of the arts and sciences, serious deficiencies exist on the supply side, especially for positions in the upper faculty ranks in major universities. The need for a significant supply component in a federal antibias program has already been explained, so it is not necessary to belabor the matter here. Chapter 9 contains a specific proposal for post-Ph.D. training while on regular faculty appointment that would significantly increase the number of women and members of minorities qualified for tenure appointments in major universities in fields where they are now quite scarce.

Further attention, however, needs to be given to such matters as (1) the proper base for proportionality calculations for goal purposes and (2) the validity of applying proportionality with timetables to certain faculty positions.

With respect to faculty in major institutions, what is the base or unit of "qualified" supply from which to establish a numerical goal? Under the HEW Guidelines, a hiring goal is to be determined by the difference between the proportion of each race, sex, etc., in the total qualified supply available to the university for appointment in the unit and the proportion actually employed in that unit by the university.

The proper unit for goal making and goal enforcement, thus, is a crucial matter. Should all numerical goals be calculated and enforced by a unit that is defined as the faculty of the arts and sciences college as a whole, a division of that college (for example, physical sciences, social sciences, humanities), each academic department, each subfield of a discipline, each faculty rank in the units just mentioned, or a particular opening (for example, a position in medieval history, modern Chinese politics, or public finance)?

On the appropriate unit for goal making and goal enforcement, the HEW Guidelines are equivocal and unenlightening. The wording is as follows:

> In many institutions the appropriate unit for goals is the school or division, rather than the department. While estimates of availability in academic employment can best be determined on a disciplinary basis, anticipated turnover and vacancies can usually be calculated on a wider basis. While a school, division or college may be the organizational unit which assumes responsibility for setting and achieving goals, departments which have traditionally excluded women or minorities from their ranks are expected to make particular efforts to recruit, hire and promote women and minorities. In other words, the Office for Civil Rights will be concerned not only with whether a school meets its overall goals, but also whether apparent general success has been achieved only by strenuous efforts on the part of a few departments (Office for Civil Rights, 1972, p. J5).

Note that the absence of women from a department's "ranks" is assumed to be a result of the department's "traditional exclusion" on the demand side and that "success" is assumed to be directly related to the "strenuousness" of the university's efforts.

Certainly the most appropriate unit would be one in which the supply—overall and by sex and by race—was sufficiently homogeneous to warrant the application of the principle of proportionality as a norm. For most tenure positions in major universities, such a supply situation does not exist. It is on those grounds that the calculation of numerical goals for tenured faculty of major universities and their enforcement by HEW is considered unwarranted and misleading.

As explained in Chapter 4, the serious objections to the HEW method can be partly met if the composition of the unit for goal making is confined to persons seeking their first regular faculty appointment as assistant professor at the end of their Ph.D. training, and if the unit is broad enough to include three or more departments so that there are sufficient openings each year and a sufficient supply in total and by sex or race for the combined openings. At the point of Ph.D. completion, the supply has a considerable amount of common, up-to-date training. The demand is likely, even at that stage, to be differentiated to a significant extent by subfield or subfields, though much less so than at a later stage in career development. However, with a sufficiently large unit, those subfield differences would tend to average out. It is assumed that, for such a unit, the distribution of supply of women, and perhaps blacks, according to qualifications for appointment might have much the same configuration as for white males.

On that basis, numerical goals might be calculated and projected by sex and race within a range of probability for first post-Ph.D. appointment as assistant professor. A proposal to that effect is set forth in some detail in Chapter 9.

INFLATED GOALS AND THEIR CONSEQUENCES

The HEW method, particularly if applied by academic departments to tenure positions in major universities, is likely to lead to inflated goals. That is so for several reasons. One, the assumption that the demand side is responsible for any disproportionality and that such disproportionality must be corrected through hiring enough women and members of minorities in itself tends to lead to inflated numerical goals. It inflates the responsibility of the demand side. Two, both HEW and the universities, in the absence of proper supply figures for each institution for each departmental subfield in which a vacancy is predicted, use the total of Ph.D. holders in the discipline or the Ph.D. recipients during a past period, say 5 to 15 years before. Such figures tend to inflate the numbers for women and blacks because they do not take account of the amount and quality of developmental experience during the first five to seven years as assistant professor. Three, in many cases, the numbers of tenured faculty in a department are so small that the proportionate figure for women (or "underrepresented" minority groups combined) is only a fraction—frequently well under one-half. The tendency is to round the figure to one if only to avoid the misinterpretation that the department considers no woman or minority person qualified for any tenure openings in that department in the near future.[2] Four, several universities may independently assume that each of them will be able to attract one out of (say) a dozen women in the country qualified for tenure appointment. If all three to four dozen major universities project as a goal one woman on tenure in that department, the resulting goals taken together are inflated. Assuming that each of 36 major universities has a numerical goal of one female professor with tenure in a particular discipline and that 12 of the 36 have a female professor in that department, then the other 24 should seek to fulfill their goal of one by making a tenure offer to a woman at least by the time their timetable indicates. In other words, the potential demand for female professors in those major institutions has been tripled by the goal-setting process. As the 24 institutions make offers designed to attract some or all of the 12 women away from their existing positions, such actions will bid up these women's salaries above those for comparable males. A dual market will tend to develop—one for females and one for males. However, only 12 of the 36 universities will have a female tenured faculty member in that discipline after all the bidding has taken place. The other 24 will continue to have a "deficiency" as long as the supply of qualified women is not increased sufficiently or until they decide to lower standards in order to appoint a woman.[3] Acceleration of the timing of offers through unduly fast timetables—even too fast for appropriate openings to develop— serves, of course, as an additional demand-inflating factor. In some negotiations with universities, HEW field staff seem to be operating on the basis of the naïve statement in the HEW Guidelines that "in many cases" full accomplishment of numerical goals "within 5 years" would be "a reasonable time" and that in other cases "more time or less time will be required" (Office for Civil Rights, 1972, p. J4).

---

[2] This goal-inflation factor is undoubtedly one reason that HEW presses for numerical goals by department and is reluctant to accept a zero goal for a department even though the calculated figure for blacks and women is actually only a small fraction of one person. It is apparently on such grounds that MIT's affirmative action plan contains the statement that as of April 1973 "women and minorities are underrepresented in most academic positions within the Institute, particularly in faculty positions, both tenured and untenured" (see *Tech Talk*, 1973*a*).

[3] A university could hire a female assistant professor in hopes of developing her into a qualified professor with tenure or possibly bid such an assistant professor away from another institution that had a female assistant professor who was about qualified for a tenure appointment.

HEW assumes no responsibility for any inflation in numerical goals, even though it may reject proposed affirmative action plans on the grounds that some of the numerical goals are not large enough or the timetables for their accomplishment are too extended. Also, HEW does not have a reporting system or statistical analyses designed to evaluate the extent to which the numerical goals of covered universities, or a category of institutions such as major universities, are inflated.

The smaller the unit for goal setting, the more necessary it becomes to predict the sex or race of individual appointments and promotions within that unit. Expectations and presumptions become attached to particular positions, and pressures, both internal and external (for example, by HEW and advocacy groups), are focused in a very specific, concrete manner. Thus, particular numerical goals exert a coercive influence.

The combination of inflated goals and strong pressures for their achievement have serious implications for a faculty system of appointment, promotion, and salary based on professional qualifications and performance. Selection of female and minority-group faculty members partly on grounds of sex or race is likely to create additional discrimination and can have quite undesirable effects on the utilization of the teaching and research resources of a university. Numerical goals that assume the promotion of particular female or minority-group assistant professors to tenure can be especially injurious over an extended period because they imply some disregard of open competition under merit-based systems for the determination of tenure appointments.

Significant deviations from choice of the best available person for a tenure position as judged by mature teacher-scholars under proper procedures is likely to cause faculty members, both tenured and nontenured, to lose confidence in the integrity of the system of professional determination of promotions and appointments to tenure. The number and ratio of "mistakes" that develop over time would increase, with adverse consequences described in Chapter 2. A two-status faculty would tend to develop: those who were chosen because their qualifications were judged by their professional peers to be the best for a position in open competition and those whose appointment occurred, in part, because of their physical characteristics—race or sex. The latter would begin to be considered as special EEO appointments and, if their effectiveness as teacher-scholars turned out to be comparatively low, they would be thought of as EEO "mistakes."

Such a situation could be embarrassing to all concerned. The opinions of colleagues and students would become evident in course elections and teaching assignments. The costs to the institution would take various forms, including faculty discontent, reduced faculty effectiveness, and less drawing power for able students and able faculty. Sex-conscious and race-conscious favoritism could also expose the university to charges of discrimination against the most able white, male applicants or assistant professors.

THE QUESTION OF SANCTIONS

Revised Order No. 4 states: "Supervisors should be made to understand that their work performance is being evaluated on the basis of their equal employment opportunity efforts and results, as well as other criteria" [par. 60-2.22(b) (8)]. Applying that idea to university faculty, it has been proposed that universities institute a system of sanctions to ensure compliance with affirmative action goals (Weitzman, 1973, pp. 500–501). Among the sanctions on a department and its individual members suggested by Professor Lenore J. Weitzman is the denial of salary increases to members of those departments that have not met affirmative action goals. Weitzman also suggests "linking" the following to "affirmative action progress:" the size of the departmental budget, the amount of university research funds granted to the department, university approval of members' applications for outside research grants, and travel allowances to professional meetings.

Such individual and collective sanctions would clearly involve attempting to coerce individual faculty in their judgments concerning the best-qualified persons for faculty appointments. Such coercion would threaten academic freedom. It would be destructive of systems of faculty appointment according to qualifications and salary increases based on performance. Such individual sanctions applied in a collective manner would be unjust to individual nontenured and tenured faculty members. Some of those selective sanctions, such as denial of salary increases, nonapproval of research applications, and selective restrictions on travel funds, would violate the tenure rights of professors in the penalized departments. The suggestion of such sanctions shows the dangers of overemphasis on the achievement of numerical hiring and promotion goals, even assuming that the goals were appropriate and were properly determined.

The federal government had not, at the time of writing, applied the sanction of partial or complete block on the flow of research funds to an institution because it had failed to achieve one or more of its numerical goals. The likelihood that such failure could be explained has meant that some university administrators are not as concerned as they should be if some of their numerical goals seem unrealistically high.

OTHER AFFIRMATIVE ACTION GOALS

As already explained, the most serious defect in the HEW program of affirmative action goals for university faculty is the absence of goals for the supply side. Such goals should be formulated primarily in terms of training and development—both Ph.D. training and on-the-job development to qualify for a position with tenure, particularly at major institutions.

Such a program for improving the supply of highly qualified female and minority-group teacher-scholars in selected disciplines is presented in detail in the appendix to Chapter 9. Under the program, universities would submit affirmative action supply plans that would aim at certain numbers of women and blacks to be trained in a Ph.D. program in a discipline or to receive further on-the-job development in a discipline while serving as full-time or part-time assistant professors. The federal government would select from among the plans offered, certain university plans, either Ph.D. or postdoctoral, for approval. The approved plans would become part of a university's overall affirmative action program.

The purpose of the affirmative action supply program would be to attract and train a sufficient number of women and blacks in teaching and scholarship so that the discipline would have a critical mass of leading teacher-scholars with excellent doctoral and postdoctoral training. The present affirmative action plans specify only the numerical composition of demand. In disciplines where the number of women and blacks with Ph.D. degrees is quite small, they tend to spread the female and minority-group faculty around, with perhaps only one in each department. Such separation may seem to be "tokenism" and may have the psychological disadvantages of "singleness."

Sex and race discrimination in university faculties have various psychological aspects. Career aspirations and expectancies are affected by colleagues' attitudes, students' attitudes, social pressures and slights. Undoubtedly, wider and deeper understanding among male white faculty of the problems of a woman or a minority person on the faculty aids in progress toward the elimination of conscious and unconscious sex and race prejudices. However, it is difficult to conceive of specific goals or targets that could be developed and used for compliance purposes.

A number of groups have proposed diversity in the faculty as a hiring objective for colleges and universities. Unfortunately, the proposers are generally vague about the kinds of diversity they have in mind. And one cannot be sure whether "diversity" is proposed as an additional goal, as a substitute for numerical hiring goals aimed at proportional representation, or as part of those goals.

Diversity is stressed as a general kind of goal and is discussed from various angles in the 1973 report of the Committee on Discrimination of the American Association of University Professors ("Affirmative Action in Higher Education," 1973). The report begins with the statement that affirmative action must be "devised wholly consistent with the highest aspirations of universities and colleges for excellence and outstanding quality and that affirmative action should in no way use the very instrument of racial or sexual discrimination which it deplores." The committee then inconsistently commends "plans in which 'preference' and 'compensation' are words of positive connotation." "Compensation" is "for past failures to reach the actual market of intellectual resources available to higher education."[4] "Preference" seems to mean "affirmative consideration of race or sex," and preference to achieve "diversity" appears to the committee "to state a neutral, principled, and altogether precedented policy of preference" (ibid., p. 181). What the committee has in mind, however, is not clear from those statements.

As discussion of this subject in Chapter 2 indicates, diversity in university faculties has many dimensions besides race and sex. Particular kinds of diversity serve particular educational purposes. Consequently, it is necessary to think in terms of the kind of diversity necessary for particular departments and institutions and to recognize the need for balance among various values and objectives.

Unfortunately, the committee does not explain what diversity as a goal would mean in operational terms—how it should be defined, balanced against other values, and, particularly, how much weight should be given to diversity in selecting tenured or nontenured faculty compared with the stress put on the regular criteria of teaching, scholarship, and other contributions to the well-being of a university. Also there is the question whether the same kind of diversity is to be the goal in all departments in a uniform pattern. For enforcement by HEW compliance officers, some definite answers would need to be at hand.

---

[4] "Affirmative Action in Higher Education" (1973, p. 178). To an economist "failure to reach an actual market" might seem to imply deficiency on the supply side – failure to apply for a job – but it is evident in subsequent remarks that a deficiency in demand is assumed.

The committee also proposes that a university "deliberately reserve discretion to depart from standards and criteria" generally applied in the selection and promotion of faculty, presumably including for tenure positions. It recommends that such "experimentation" be part of "the standard of a department or institution" in order to "help broaden the design of [an affirmative action] plan" (ibid., p. 178). However, the committee does not explain how an institution, following its advice, convinces a compliance officer that no sex discrimination has occurred when, as an experiment, a white male is appointed because, say, he seemed the best representative of the views of the radical left, or the radical right, or some particular religious or ethnic group. It is no answer to such problems to say, as the committee report does, that "at the present moment, the politics of reaction are a greater source for concern than the possibility that affirmative action might lend itself to heavy-handed bureaucratic misapplication" (ibid., p. 178).

The nation's leading universities have much to contribute to the solution of the problems of race, sex, and religious prejudice in career development and worklife in this country. Unwittingly to insist that they conform to a single design for affirmative action plans and goals, developed for industries like building construction and steel, is heavy-handed bureaucratic regulation. As the preceding pages have indicated and the chapters that follow further explain, HEW regulation of universities does have serious implications for their future progress.

STATEMENTS OF THE CARNEGIE COMMISSION

Chapters 1 through 5 of this study were in first draft in September 1973, before the Carnegie Commission's "Report and Recommendations" contained in *Opportunities for Women in Higher Education* was issued. On the basis of the material presented in the first five chapters, the author would question the wisdom of the following Commission recommendation concerning an affirmative action goal and timetable for each academic department:

> 2. Every department and school in an academic institution should establish, in consultation with the administration of the college or university, a goal relating to the relative representation of women on its regular faculty (assistant professor to full professor). In determining these goals, every appropriate source of information on the relative size of available pools of qualified women and men should be consulted—not just those indicated in the federal guidelines. A reasonable timetable for achieving the goals should be developed, but allowance should be made for special difficulties that may be encountered in adhering to the timetable, especially in fields in which there are currently relatively few women with doctor's degrees and in which competition among institutions for this limited pool of talent is likely to be intense (Carnegie Commission, 1973*b*, p. 148).

Questions can also be raised concerning the validity of the following statement:

> The Commission believes that the evidence we have presented in Section 7 relating to the representation of women on college and university faculties, and to the lower salaries women receive, indicates clearly that a serious problem of discrimination exists and that the problem is particularly acute in the leading research universities and in the departments in those universities that have traditionally had predominantly male faculties (Carnegie Commission, 1973*b*, pp. 136–137).

The evidence referred to is in large measure the Scott study discussed toward the end of Chapter 3. That the problem of sex discrimination in salaries is "particularly acute" in the academic departments of major universities that have "predominantly male faculties" is doubtful. The material presented in Chapter 3 would indicate that if all factors are taken into account, especially on the supply side, the reverse is probably the case. Sex discrimination in salary, properly calculated, is probably less prevalent and less significant in the teaching faculties in arts and sciences in major universities than in other universities and colleges as a group.

6. Faculty Cases under Federal and State Laws

The differences in aim and legal basis between the HEW Guidelines and equal employment opportunity legislation come into focus in individual complaint cases. The federal Civil Rights Act of 1964 and the state fair employment practices laws[1] provide equal protection for all—males and females, black and white—based on qualifications. The HEW Guidelines, requiring specific, result-oriented hiring goals and timetables by sex and race, stimulate discrimination in favor of women and members of minorities. That is especially true where numerical goals are inflated.[2]

Generally speaking, preferential hiring for members of a particular race or sex, if practiced in individual cases, is likely to be in violation of the Civil Rights Act of 1964 and most of the state fair employment practices laws. Also, statistics can be used to support a complaint that a woman or a minority person was given preferential treatment in hiring or in promotion just as they have been used to support charges of discrimination against women and minority groups. For example, an affirmative action plan of a Midwestern university's politics department contains numerical goals as follows: a net increase in three years of 1 façulty member to a total of 49, to be achieved by decreasing the male faculty by 8 and increasing the minority-group and female faculty from 6 to 15. In the New York State University system between the fall of 1970 and the fall of 1971, the total number of faculty increased from 9,492 to 9,608, or by 116. Of that increase of 116 faculty members, 111 were reported as "identified" with a minority group including women (Office of Equal Employment Opportunity Programs, 1972, p. 13). It might be difficult to explain how those results could be obtained without preferential hiring. Indeed, there is evidence that during that period women and members of minorities were given preference for appointment to certain faculty positions at the State University of New York at Albany and at other locations, in order to achieve affirmative action goals.[3]

---

[1] Thirty-seven states have fair employment practices laws, but not all of those laws cover both public and private institutions of higher education. Also some cities, including Cleveland, New York, Philadelphia, Pittsburgh, and St. Louis, have municipal fair employment practices laws.

[2] Some writers contend that, under American constitutional law, there are serious doubts whether government-required, affirmative action hiring programs, which are "result-oriented" and aim at racial or sex balance in terms of specific numbers, are constitutional under the conditions in most universities. That is because they involve using race and sex as a criterion for employment and result in restricting the employment opportunities of "nonminority" individuals because of their race or sex. See Sherain (1973) and Bickel (1973, no. 73-235).

CORRECTION OF BIAS

Extending back for decades, in many institutions of higher education, female faculty have been discriminated against by receiving less than equal pay[4] and having less than equal opportunity to advance in rank. Individuals have been handicapped in their career development by such discrimination in ways that often cannot, years later, be fully corrected.

In the case of female and minority-group faculty, the appropriate remedy would seem to be one aimed at correcting the situation insofar as that is possible for the particular faculty member or class of faculty members directly affected by discrimination. That is the aim and method of the Equal Employment Opportunity Commission, the state fair employment practices agencies, and the Equal Pay Division of the Department of Labor in enforcing the law against discrimination involving race, sex, color, or national origin. Individual complaints are filed with those agencies, which investigate the complaints, and if there are reasonable grounds to believe that discrimination has occurred, prosecute the cases for the complainants, if necessary in court, and seek to achieve proper compensation and academic status. Corrective action may involve requiring a university to carry out some specific affirmative action program directed to the complaint in question.

---

[3] See Statement of the Anti-Defamation League of B'nai B'rith, submitted to the New York State Advisory Committee to the U.S. Commission on Civil Rights for inclusion in the Hearings in Albany on June 6 and 7, 1973, dealing with problems concerning Equal Employment Opportunity within the State University of New York.

[4] Equal pay for women for the performance of equal work is provided in the Fair Labor Standards Act administered by the Wage-Hour Division of the U.S. Department of Labor (university faculty have been covered since mid-1972) and in equal pay laws in 34 states, many of which have coverage that includes universities. The Fair Labor Standards Act also requires equal pay for men by forbidding employers to discriminate between male and female employees by paying lower wages or salaries to employees of one sex than to those of the other sex for equal work performed under similar working conditions that require equal skill, effort, and responsibility. The equal-pay provisions of the Fair Labor Standards Act apply only to discrimination based on sex and require that the lower rates of pay for one sex be raised to the higher rates for the other sex where a differential is established to be discriminatory.

By contrast, the HEW requirements for affirmative action programs are not designed to remedy specific discrimination against individuals. Rather, they aim to increase the hiring of women and blacks and members of other minorities in universities, whether those women and minority-group members have themselves ever been discriminated against in connection with university employment or not.

INCREASING NUMBER OF FORMAL COMPLAINTS

The number of complaints filed by faculty alleging discrimination in connection with their employment has been increasing and is expected to grow significantly in volume over the next two or three years. Some women's groups have recently been promoting the use of the courts. The 1972 amendments to the Civil Rights Act of 1964 extended its nondiscrimination provisions to all institutions of higher education and strengthened the powers of the Equal Employment Opportunity Commission (EEOC) to enforce Title VII of the act.

The total number of faculty complaints of discrimination filed with the government agencies and the courts at any one time is not known. There is no central reporting of all job discrimination complaints filed against colleges and universities with the Office for Civil Rights of HEW, the federal Equal Employment Opportunity Commission, the Department of Labor under the Equal Pay Act, the state and city agencies enforcing fair employment practices laws, and with the state and federal courts. Often the same complaint is filed with a number of agencies; a complaint may get settled at various points in the procedure; and complaints against higher education institutions are generally not separated into faculty and nonfaculty categories.

A basic reason for increasing faculty complaints of job bias is inconsistency in the federal programs themselves. As previously explained, the HEW Guidelines stimulate discrimination in favor of women and minority groups. They do so through alleging deficiencies that, in some cases, are not due to discrimination on the demand side, but must, the compliance officers insist, be corrected by the institution stating numerical hiring goals and using "good-faith efforts" to meet those goals.

On the other hand, the Civil Rights Act of 1964 clearly states that it is an unlawful employment practice to discriminate because of an individual's race, color, religion, sex, or national origin. Much the same language is in the state fair-practices acts. They provide that each job applicant must be treated as an individual, without regard to sex or race, and that employment or pay cannot be based on race, sex, or religion. The institutions of higher education are in the middle of a conflict between the guidelines as applied and enforced by HEW and the Civil Rights Act as interpreted by the U.S. Supreme Court.

Another reason for an increase in the number of complaints filed with the federal and state agencies is that those agencies often pay little or no attention to the existence and use of established faculty procedures for the settlement of charges of discrimination. The HEW Guidelines urge that universities have procedures for the fair handling of grievances as part of their affirmative action plans, but federal and state agencies handling individual complaints have often disregarded a complainant's failure or refusal to use the university's faculty grievance procedure before filing a complaint. Moreover, the government agency takes up a person's complaint free of charge and can seek to have the courts require that a university, if found in violation, increase the complainant's pay, compensate for past insufficiency through back pay, reappoint the complainant, appoint him or her if discrimination occurred in the appointment of someone else, and promote an assistant professor to tenure. Also, the federal or state agency has power to acquire data and access to confidential files and to hold open hearings or prosecute a case, if necessary, through the courts, on behalf of a complainant.

The HEW Office for Civil Rights assumes no responsibility if a university, following the instructions of an HEW compliance officer, is for that reason charged by EEOC, or a state agency, or a court, with discrimination against a white male applicant by hiring a less-qualified woman or black. In other words, a university can be charged at the same time with discrimination against women and blacks (by HEW because it has alleged "deficiencies" that must be "corrected" or by the EEOC or a state agency in individual cases of alleged past discrimination) and with discrimination against nonminority males (because the university favored women or blacks in hiring, which was the only way it could fulfill its affirmative action goals and meet timetables established according to instructions by HEW regional civil rights officials).

By October 1973, EEOC had some 600[5] individual complaints filed against colleges and universities, and HEW had received about 150 individual complaints of discrimination against nonminority males (in favor of women or blacks) or against women (in favor of blacks) in colleges and universities. It was not known against how many individual institutions complaints had been filed in both categories—discrimination against women and blacks and against nonminority whites. Since EEOC had a backlog of some 80,000 charges of employment discrimination, with 50,000 being filed each year, considerable delay in the handling of such complaints was to be expected.

The growing scarcity of faculty openings (with 100 to 500 applicants responding to an advertisement for an assistant professor opening in many disciplines) serves to enlarge the number of complaints of bias filed with government agencies or with the courts.

Under such conditions, failure to obtain a desirable faculty position for which one applied or into which one hoped to be promoted can prove to be quite a loss to the individual. Correspondingly, gaining a three-year appointment or a promotion to continuous tenure by filing a complaint followed by government action, can be quite valuable for the complainant.[6]

RESORT TO GOVERNMENT AGENCIES AND THE COURTS

The staffs of federal and state civil rights agencies and the courts are not well qualified to assess and decide the relative competencies and promise of individual teacher-scholars for a particular tenure position at a university. They lack the long years of academic experience and the professional knowledge in the academic subfields. Therefore, alleged cases of discrimination in promotion or appointment to a tenure position are difficult for them to handle with assurance. They can, presumably, make some judgment regarding the adequacy of the recruitment, of the information available, and of the procedures followed.

For the staffs of government agencies and the courts to review in open hearings the validity of appointment, promotion, and salary decisions made under the procedures explained in Chapter 2 raises other serious issues. Under assurance of strictly confidential use in order to encourage candor, assessments by distinguished teacher-scholars are obtained comparing the complainant's qualifications for a position or promotion to tenure with other faculty at that university and elsewhere. To reveal such confidential assessments as comparative evidence in open hearings or in court would not only discourage frank assessments in the future but also would involve invasion of the privacy of persons not directly party to the case and could seriously injure their professional reputations.

---

[5] Increased to 1,500 by April 1974.

[6] A tenure position at a major university usually means a professor's salary and benefits for 30 to 35 years, which is roughly the yearly income from (say) $600,000 of capital funds.

In addition, the tenured members of a department, members of ad hoc or standing faculty committees, and academic administrators could be required to testify as to their group discussions and decisions concerning the faculty member and to testify in detail about the weaknesses and strengths of various candidates and about past mistakes made in promotion to tenure. Such a requirement would discourage candid judgments in the future because of possible exposure in hearings and thus would reduce the effectiveness of evaluative procedures. It would also tend to discourage use of the principle of salary increases according to merit and would encourage automatic and uniform increases or increases according to length of service in the rank or some other formula applied without direct relationship to performance. Small differences in salary increase might seem too difficult to explain with several persons participating in the decision.

For these reasons, reliance on statistics to determine the existence or nonexistence of discrimination in faculty employment could be quite incorrect and actually misleading. Unverifiable claims that particular statements were made in conversation between the complainant and, say, the departmental chairman can make a case seem to rest heavily on one person's word against another's. Therefore, there is a need to reduce to writing messages to individual faculty about the quality of their work and for department chairmen and deans to maintain written summaries of meetings where statements and evaluations of a faculty member's performance and prospects are made.

Adversary proceedings between a faculty member and a university—which are really directed mainly at those faculty who participated in the evaluations and decisions alleged to be discriminatory—that take place in open hearings held by a government agency or in court can cause lasting rifts and bitterness in a department, especially where faculty enjoy academic freedom and tenure and the department is largely self-governing.

The faculty of major universities are but a very small fraction of the total employment covered either by Revised Order No. 4[7] or by the Civil Rights Act of 1964 as amended. The danger to the universities is that federal and state rules, agency decisions, and federal and state court decisions will be based on the industrial model of employment and management and will fail to make proper allowance for university faculty systems of shared government, academic freedom plus academic tenure, and compensation and advancement according to evaluations of a candidate's performance and potential as a faculty member and contributor to progress in that field or subfield, made by mature teacher-scholars.

With the quality of a department and the university so importantly involved in making tenure appointments, government-agency and court decisions based on the industry model could have profound implications for the faculties of major universities.

EXPOSURE TO CHARGES

Experience clearly demonstrates that a university invites charges of discrimination whenever it deviates in a faculty appointment or promotion from the principle of selecting the candidate properly judged to be the best qualified to fulfill the requirements of the position. The same is true for the determination of individual salaries. Selection and reward according to individual performance and future promise based on past performance are basic for achieving equal employment opportunity, for providing proper incentives for accomplishment, and for maintaining the integrity of the institution.

Presumably the federal and state agencies and courts, in judging the validity of individual complaints of discrimination, should use that same standard. Both prejudice against, and preference for, persons on the basis of color, race, sex, or other nonperformance attributes are destructive of equal employment opportunity.

A university by its very nature may be especially vulnerable to a charge of discrimination both for and against faculty on such grounds as race, religion, sex, or national origin. Faculty are encouraged, by academic freedom and tenure and by academic training, to be independent thinkers and to explore various ideas and systems of thought. The classroom is a place for examining differing and conflicting views. It is not that faculty are especially bias-prone but only that they do and should express themselves freely in seminars, classes, and department or committee meetings.

---

[7] Under the Executive orders, every enterprise with over 50 employees that has a federal contract or subcontracts totaling $50,000 must have a written affirmative action program for each of its establishments; every institution or organization holding a federal contract or subcontract of $10,000 or more must agree not to discriminate against any employee or applicant for employment with respect to race, color, religion, sex, or national origin.

The tenured members of a department usually play a key role in the selection and advancement of department faculty. Therefore, what one or more of them may say or write in letters, articles, private conversation, or the classroom may possibly be allowed as evidence of bias in an open hearing held by an agency or in a court. It is possible, therefore, that the adjudication of an individual complaint could raise a serious question concerning academic freedom and tenure as well as confidentiality of solicited letters of evaluation. In addition, apparently there is no time limit on the filing of discrimination charges or the distance back in time that statements and events can be used in such proceedings as evidence of personal bias on grounds of race, sex, religion, and national origin.

CONSEQUENCES OF GOVERNMENT PROSECUTION AND ADJUDICATION

It will be useful to explain in summary fashion the various short-run and long-term disadvantages to the parties that resort to government agency or court procedures for settlement may involve.

1 Once a complaint is filed with a federal or state agency or a court and a formal statement setting forth the alleged discrimination is presented to the institution, forces are set in motion on both sides aimed at preparing the strongest possible position. Both sides are likely to put their case in the hands of a lawyer, who will view the matter in the light of past court decisions, effective evidence, and legal tactics. Stress is put on arguing and winning the case.

2 With the complaint filed and lawyers working on the preparation and presentation of their case, things begin to happen to faculty relations in the department and the university. Faculty and administrators are cautioned on what they can and should say, because the complaint normally would be against a recommendation or decision by the tenured members of the department concerning the complainant's appointment, reappointment, promotion, or salary and

also presumably against action taken by any faculty or faculty-administration committee that reviews and acts on department recommendations. Tensions rise and sides are taken by faculty, administrators, and students, with publicity about the case appearing in the student paper and other media. (Some 400 female employees at the University of Pennsylvania are said to contribute to the legal expenses of women filing a sex discrimination case against the institution.)

3 The processing of a case by a civil rights agency or a court usually takes considerable time because of a backlog of cases. Often the preparation and presentation of the case are fairly expensive in terms of effort, money, and psychological wear and tear on the parties. Open hearings held by an agency or by a court tend to create tension and bitterness within the complainant's department and the university, as the tenured members of the department and members of the review committee testify and are cross-examined concerning the basis for their decisions with respect to the complainant's appointment and pay. Comparisons are likely to be drawn in terms of strengths, weaknesses, and rate of progress of faculty in the same or a higher rank in the department and in similar departments such as foreign languages and literatures. Use in public hearings of information and evaluations of other faculty for comparison with the complainant's qualities as a teacher, scholar, and colleague, and skill in administering programs is likely to be embarrassing to both the complainant and faculty used for such comparative purposes. If outside letters of evaluation have been obtained under promise of confidentiality, any requirement to reveal their contents in such hearings not only could be embarrassing but also could result in inability of the institution henceforth to obtain such valuable candid assessments.

4 A decision by a government agency or a court could be unsatisfactory to both parties. That is not too unlikely because agency staffs and judges cannot be expected to be highly knowledgeable concerning faculty practices and problems and are likely in decisions to follow precedents in cases decided according to the industry model rather than the academic-faculty model of operation. A decision may build in bitterness and conflict that will seriously hamper the effectiveness of the department and its members long into the future. Certain kinds of decisions could almost assure continued discord and subsequent filing of new charges of discrimination.

Because of the likelihood of such difficulties and disadvantages to the parties in cases processed through the agencies and the courts, it would be desirable if the parties had an option to use, if both wished to do so, a method of dispute settlement that might be more satisfactory, especially for faculty cases.

OUTSIDE MEDIATION-ARBITRATION

In view of the possible unsatisfactory consequences of processing faculty complaints of discrimination through government agencies and the courts, an optional alternative procedure is proposed for voluntary use where it is appropriate. Compared with agency-court processing of discrimination complaints, the optional procedure would, for many cases: (1) be quicker and less costly, (2) use persons who understand how universities do and should operate for factual investigation, mediation, and settlement decisions, (3) provide better assessment of the validity and value of comparative data and statements, without the necessity of faculty colleagues having to present, in open meeting, detailed assessments of the strengths and weaknesses of the complainant compared with others in the department and elsewhere, in terms of teaching, research, and general usefulness and value to the university, (4) be more likely to result in a mutually acceptable settlement through mediation (conciliation) than would be the case if handled by a government civil rights agency, and (5) where an outside decision is necessary, result in one that is more likely to be mutually face-saving and satisfactory to both parties over the long run.[8]

The essence of the proposal is to provide to the parties a choice of submitting a claim of discrimination in faculty employment that cannot be settled by means of internal procedures, to outside investigation, mediation, and, if necessary, arbitration. The mediator-arbitrators would be selected by the parties from a panel composed of faculty members at a number of institutions, most of whom would have had experience as labor arbitrators. The component parts of the proposal can be explained as follows:

---

[8] In deciding on a remedy in the case of university faculty, account usually would need to be taken of the existence of specialization by subfield, the fact that only one expert may be needed in many subfields, and the practice of professors having continuing tenure. Such factors may sharply restrict transfer to another position and create the possibility of repeated appeals to the court over an extended period of time, whereas in industry there would generally be much more flexibility of adjustment to a court order to rehire or promote an employee.

1 Arrangements would be made for a public-service agency, with interest in the mediation and arbitration of disputes, to administer such a program. One suggested agency is the National Center for Dispute Settlement, a division of the American Arbitration Association. Established in mid-1968, with headquarters in Washington and local operations in eight cities across the country, it has been engaged in developing ways of providing third-party neutral assistance for resolving community, consumer, public-employment, and similar types of conflict through the services of experienced mediators and arbitrators.

2 The program could begin to operate either with a national panel of 100 to 200 faculty mediator-arbitrators and with selected universities and colleges around the country participating, or on a regional unit basis, with regional panels of faculty mediator-arbitrators and with participation by selected universities and colleges in the regional area. Examples of such regional areas are the following: the area within 100 miles of Boston, the New York–Philadelphia regional area, the area within 150 or 200 miles of Chicago, the area between Washington, D.C., and Durham–Chapel Hill in North Carolina, and the area between San Francisco and Los Angeles in California.

3 Persons named to a national or regional panel would be tenured faculty with sufficient independence, academic reputation, and (in most cases) arbitration experience, so that their investigation and mediation efforts and their arbitration decisions would be well respected. Because there is an insufficient number of experienced female and minority-group faculty members for such a program, it would be necessary to provide for the development of a more adequate supply. To some extent, that could be accomplished by having some of them gain experience by participating with others on individual cases.

4 At least in the early experimental stages, the cost of financing mediation-arbitration in each case (arbitrator's fees, travel, overhead) would be met by payment of at least half the cost by the institution. The remainder hopefully would be covered, at least

for an experimental period, by foundation support and possibly other sources. The complainant charging sex or race discrimination in employment could not be expected to pay part of such costs because he or she can have the case prosecuted free of charge by federal and state agencies. It might prove desirable to have some means of making sure that complaints submitted to the procedure actually should have that treatment, particularly if the costless aspect encouraged many requests for use of the method where that seemed unnecessary.

5 Outside mediator-arbitrators should have the right to examine all pertinent material, including confidential letters of evaluation, to interview all persons involved in the matter or useful for comparative purposes, and to obtain confidential assessments of their own. Private hearings would be usually held, with stress placed on getting all the facts in a calm, objective manner, without any publicity. Lawyers would not be necessary in many cases. In such ways, hostility and bitterness could be minimized.

6 After obtaining and assessing all the facts, the mediator-arbitrator(s) could talk tentatively with both parties separately about the directions that their thinking was taking and what those directions might imply with respect to a decision. Under such circumstances, a mediated settlement might be more possible than if a federal or state agency (the prosecutor) were to try to mediate the dispute.

7 A decision by the mediator-arbitrator(s) would be considered conclusive, unless the parties stipulated otherwise or court action modified or nullified the decision. In some cases, a university may be reluctant to allow outside arbitrators to grant continuous tenure as part of a binding arbitration decision. However, a complainant may insist, as a condition of entering the procedure, that the mediator-arbitrator(s) have the same power to levy remedies as a federal or state agency and the courts. Such conditions can be spelled out in the stipulation to arbitrate.

8 The procedures and decisions of mediator-arbitrator(s) can be more flexible and better adapted to the circumstances of the case and the academic department involved than would be the situation under agency and court action. Therefore, in many cases it is likely that a decision by faculty arbitrators would be more constructive over the long run than decisions handed down, after public adversary proceedings, by government agencies and the courts. An agency or court decision would be more likely to be based on precedents

developed in previous cases on the basis of industrial employment conditions.[9]

9 Either party would be free to agree to enter or decline to enter this sort of ad hoc arrangement for outside faculty mediation-arbitration, and each would be free to choose (say) one mediator-arbitrator from the panel, with a third panel member chosen by those two, by lot, or by some other means. In any decision, the mediator-arbitrators chosen would be constrained by the terms of stipulation to arbitrate drawn up and agreed to by the parties.

With a few exceptions, the proposal has met with a favorable response from university faculty, administrators, and representatives of women and minority groups. Its advantages in reducing the delay, bitterness, and costliness of alternative methods and the advantages of private handling of such cases by knowledgeable faculty from outside are well understood by persons who have had experience with a case carried through an agency procedure and the courts.

Discussion of the proposal with a variety of persons, including arbitrators and law professors, has indicated a number of possible problems that might develop. It would, therefore, seem best to start on a relatively small scale in selected areas in an experimental manner.

Some possible problems can be briefly indicated. One is that such an arrangement might encourage an unnecessarily large volume of complaints to be handled by that means. If experience so indicated, there might be a need, say, to develop some sort of advisory service by sympathetic faculty to help screen out complaints that need not or should not be submitted to the outside mediation-arbitration process.

Another problem could be the development of a sufficient number of tenured female and minority-group faculty as mediator-arbitrators. Some universities (for example, Cornell, UCLA, Berkeley) have programs for training arbitrators. However, in most cases, working with faculty experienced in mediation-arbitration should provide the principal component of training for faculty who initially may lack such experience. The panel from which a mediator-arbitrator or, say, three mediator-arbitrators are selected should be large enough to provide adequate choice and to keep the demand for any one person's service under the plan within reasonable bounds.

---

[9] The significance of the application of the industrial model of employment to faculty may be indicated by the following provision in Revised Order No. 4, par. 60-2.24 (f)(s): "Neither minority nor female employees should be required to possess higher qualifications than those of the lowest qualified incumbent." It is rather surprising to find that provision cited with approval for application to university faculty in an article that also states that the regulations regarding promotion in Revised Order No. 4 "strengthen merit standards." See Weitzman (1973, pp. 472, 484).

A third problem is illustrated by the U.S. Supreme Court's decision in *Alexander v. Gardner-Denver Co.* (decided February 19, 1974).[10] The decision in that case held that an employee's submission of his claim to final arbitration under a nondiscrimination clause of a collective-bargaining agreement does not foreclose his statutory right to a trial *de novo* under Title VII of the Civil Rights Act of 1964. In considering an employee's claim in a court action, "the federal court may admit the arbitral decision as evidence and accord it such weight as may be appropriate under the facts and circumstances of each case."

The Supreme Court points out that "presumably an employee may waive his" right of court action under Title VII as part of a voluntary settlement and that arbitration "may satisfy an employee's perceived need to resort to the judicial forum, thus saving" both parties the costs and aggravations associated with a lawsuit.

The mediation-arbitration proposal presented here differs in a number of respects from arbitration of a grievance under a collective-bargaining agreement. Under such an agreement, the grievance procedure and the arbitrator are predetermined by the management and the union; the union may not have a significant interest in representing the rights of the grievant under antidiscrimination legislation; and the arbitrator is supposed to interpret and apply the collective-bargaining agreement in ruling on the complaint.

The mediation-arbitration proposal for faculty is not subject to those constraints. The parties are free to use or not to use this means for resolving the complaint. They participate in the selection of the mediator-arbitrator(s) on an ad hoc basis for this particular case. The mediator-arbitrator(s) are subject to the stipulation to arbitrate, which the parties agreed upon to govern the arbitration process and to be the basis for an award. The case is directly concerned with an issue of discrimination in employment alleged to be on grounds of race, sex, religion, or national origin as specified in the federal and state legislation. Thus the rights of the complainant under Title VII of the Civil Rights Act and under state fair employment practices laws would be taken into account in a mediated settlement or an arbitration award.[11]

---

[10] For the full text of the decision, see *Daily Labor Report* (1974).

Presumably such factors would be taken into account by the federal courts, should individuals bring a Title VII suit following a decision under the program of outside mediation-arbitration for faculty. Also, that program should considerably reduce resort to court action. Nevertheless the decision in *Alexander v. Gardner-Denver Co.* (1974) clearly indicates that the federal courts have the ultimate powers to enforce Title VII. That fact would need to be taken into account in designing and operating the mediation-arbitration program.

The financing of the program beyond the first year or two could present a problem. It has been suggested that universities and colleges might be willing to pay most or all of the cost of operation. Full payment by the institution, however, could raise an objection that such financing might possibly affect the outcome of the process. Perhaps it would be desirable to experiment in one area to see whether that sort of objection has any validity. Undoubtedly, partial support could be developed from outside sources if the total was not a large sum.

In the operation of a new program, of course, unanticipated problems are bound to arise. Many would be administrative in character.

The benefits of such a program have, for the most part, been already explained. They are the effective operation of the faculty systems of self-government and reward according to merit as determined by professional evaluation, relatively prompt enforcement of justice and rectification of injustice in faculty affairs, and effective operation of academic departments. The development and operation of such a program would present university faculty and administrators with the opportunity and challenge to work out the necessary adaptations of their systems of government and justice for faculty to meet changing conditions and developments in public policy.

[11] One might also observe again that a large part of the total university faculty in the country, both male and female, are, according to surveys, very sympathetic to fair, and even preferential, treatment of minority persons and women in faculty employment.

7. Administration of Regulations and Laws

Federal and state agencies have had difficulties in trying to administer their enforcement programs as applied to university faculty. Several factors help to explain their difficulties.

Generally, the enforcement programs are not altogether clear concerning their short-run and long-run objectives. As previously explained, the HEW program of contract compliance tries to pursue two objectives that are not fully consistent: nondiscrimination and pressures to favor racial minority groups and women, on grounds that persons belonging to those categories have in the past suffered from discrimination in many kinds of employment. In addition to such inconsistency, the HEW Guidelines (based on Revised Order No. 4) are, as has been pointed out, ill-suited for much faculty employment. Consequently, as is explained more fully below, HEW's 10 civil rights regional offices are uneven in their interpretations and in their demands with respect to items to be included in affirmative action plans and the depth of intrusion into a university's internal operations. Also, university faculty are so unusual in their methods of operation that the staffs of federal and state compliance agencies encounter difficulties when they try to apply uniformly to universities the program rules and assumptions that grow out of conditions in industry and construction or even public grade and high schools or hospitals. Most members of the staffs of compliance agencies have had little experience as regular faculty members or academic administrators in a university. Without such experience they may not be well qualified for the task of developing appropriate applications of complicated rules and statistical calculations to the special circumstances of faculty operations.

For an institution to be in compliance, its affirmative action plan must be acceptable to the HEW Office for Civil Rights. Under delegation from the Director of the Office of Federal Contract Compliance in the Department of Labor, the Office for Civil Rights in HEW has the power to issue special rules and regulations to apply to universities and colleges, to conduct compliance reviews, and to approve or disapprove written affirmative action plans of colleges and universities. Such HEW approval, or HEW disapproval that leads to withdrawal of federal contract eligibility, is subject to review and confirmation by the Department of Labor. Thus, the HEW Office for Civil Rights has responsibility for determining in the first instance whether a contractor is in compliance or is able to comply as the result of the submission of an acceptable affirmative action plan. The extent to which one of HEW's regional offices has the authority to approve or disapprove of a proposed affirmative action plan seems to have varied from time to time. In 1973 regional offices apparently had the power to disapprove a plan but could only recommend approval to the Washington headquarters. If a proposal raises an issue or issues that have not been decided in rulings already made, the matter is submitted to HEW headquarters in Washington and, if necessary, to the Department of Labor, for ultimate determination.

In case a university or college is found to be in noncompliance, HEW's Office for Civil Rights recommends to the Department of Labor possible enforcement action, which would normally take the form of placing the institution on complete or partial ineligibility for new contracts or renewal of existing contracts. Authority for such action rests in the Department of Labor. As indicated in Chapter 1, by the end of 1973 some 20 universities had been subjected to a temporary block of new contracts or renewals, on grounds of noncompliance. In the case of universities and colleges, the federal government has not proceeded to the stage of formal termination of a contract or formal ineligibility proceedings.[1]

Largely because compliance reviews, approval and disapproval of university affirmative action plans, and prosecution of individual complaints by EEOC and state agencies each come up one university at a time, the administration of government enforcement agencies and programs has not had an objective, critical review by scholars. No such careful review and analysis are attempted here.

[1] Disapprovals of proposed affirmative action plans generally mean further negotiation of a plan that is acceptable. Depending on the circumstances, an institution could be declared ineligible for contract renewal or new contracts while negotiations about revisions of its proposed affirmative action program are proceeding.

It is necessary, however, to pay some attention to administrative problems, because the difficulties they raise are important for understanding the need for serious reworking of the HEW Guidelines.

THE STAFFS OF ENFORCEMENT AGENCIES

The staff of HEW engaged in compliance enforcement for institutions of higher education is quite small when one considers the tasks that enforcement of the HEW Guidelines presumably involve. As of June 30, 1973, a total of 74 persons were engaged in compliance reviews, in criticism and decisions with respect to affirmative action plans presented by colleges and universities, and in other aspects of enforcement. Of the 74 total, 16 were in the Washington headquarters and 58 in the 10 regional offices, ranging from 10 in the New York and Atlanta offices to 3 in the Philadelphia and the Seattle offices. No one was reported as officially assigned to the Higher Education Division in the Kansas City office. In regional offices there may be some temporary shifting of personnel between divisions (for example, from elementary and secondary education and vice versa) as the need requires.[2]

The size of the staff has remained fairly constant since the Higher Education Division was established in April 1972. However, significant changes in personnel have occurred in several of the regional offices in the past three years. In fact, the turnover in some regional offices has been extremely high, with staff members leaving for higher pay in industry. For example, of the staff of seven in the Chicago office in November 1973, only one had been there in 1970.

Women and especially blacks are overrepresented among the 74 staff members in the Higher Education Division. On June 30, 1973, about one-half (35) were women, almost three-fifths (43) were members of minorities, and approximately one-half (35) were blacks. The 58 regional compliance officers were distributed as follows: 25 women (13 blacks, 10 whites, and 2 members of other minorities) and 33 males (13 blacks, 14 whites, and 6 members of other minorities).

The level of staff appointments for the 58 in the field is not, for the group as a whole, very high. At the end of June 1973, some two-thirds (40) were in grades G.S. 11 to 14 (minimum basic salaries for the first year from around $14,000 to $23,000);[3] the other third (18) were in grades G.S. 6 to 9 (minimum basic salaries for the first year from around $8,500 to $11,600).

---

[2] Data on the Higher Education Division staff are provided in a letter (with 12 pages of tables) from Gweldolyn H. Gregory, Director of Office of Policy Communication, Office for Civil Rights, HEW, to Sheldon E. Steinbach, American Council on Education, dated Sept. 17, 1973.

On June 30, 1973, blacks occupied the top positions in the Higher Education Division in the following major regional offices: Boston, New York, Philadelphia, Atlanta, Chicago, and San Francisco. Blacks were in grade 14 in four of those offices; a black and a white shared the highest grade of 13 in the Chicago office; and a black was acting head as a grade 12 in the Philadelphia office. In addition, blacks were in the grade just below the top grade as follows: 1 out of 2 in Boston, 1 out of 2 in New York, 3 out of 7 in Atlanta, 2 out of 2 in Chicago, and 1 out of 4 in San Francisco. The blacks holding the high-level positions in the regional offices have come heavily from the civil rights movement.

Women held high positions in the Higher Education Division in regional offices as follows: 1 out of 2 in the highest grade in Chicago and second highest in grade level among the Higher Education Division staff in 1 out of 2 persons in Boston and in New York, 1 out of 1 in Philadelphia, and 2 out of 7 in Atlanta.

Just how much blacks and women are overrepresented on the higher education staff in the regional offices (and white males are underrepresented) may be difficult to determine. Here also there is a problem of how to define and measure the pool of available and qualified persons for the field staff of the Higher Education Division of HEW's Office for Civil Rights. However, it would be difficult by any definition to conclude that the staff of mid-1973 was proportional by race or sex to the pool of qualified persons.

There would seem to have been a conscious attempt to achieve overrepresentation of blacks and women, and to do so even though the resulting staff was generally deficient in background experience and detailed knowledge about the systems of faculty self-determination and governance in American universities. Lack of full understanding of the peculiarities of university operations apparently helps to explain why some of the demands of regional offices have been inappropriate and why university officials have experienced some difficulties in communicating with HEW regional personnel.

Only 14 of the 74 staff at headquarters or in the field are reported to have had some experience in the faculty or in the administrative or consultative positions in a college or university. Few have had extensive experience in a university as a member of a faculty or the academic administration. In an effort to help remedy such deficiencies in the staff, various three-day seminars or training programs have been held, and new employees in regional offices are considered for the first three months to be in an orientation-training program under the auspices of the regional branch chief.

---

[3] Seven were in grade 14, 10 in grade 13, 14 in grade 12, and 9 in grade 11. The salary schedule for federal employees was raised effective October 1, 1973.

It would be desirable for the staff to have more understanding and appreciation of (1) the importance of independence and diversity for university educational programs, (2) the need for considerable involvement of faculty in university governance and managerial responsibilities and what that implies for compliance enforcement, (3) the vital significance of maintaining merit as the main basis for faculty selection and individual salaries, (4) the characteristics of faculty labor supply by discipline and subfield and by type of institution, and (5) the differences between tenure and nontenure positions in terms of supply, demand, and responsibilities in different departments and universities. Also, some training in statistical analysis and labor market analysis would be helpful. Lack of such background and understanding is evident in the demands and comments that the compliance staff make and the rather rigid manner in which, in some cases in particular regions, the inappropriate language and concepts of Revised Order No. 4 are rigidly applied to university faculties.

The staffs of EEOC and the state civil rights agencies are likely to be even less conscious of the implications for compliance enforcement of the professional practices and the collegial methods of decision making in universities. Also, the compliance thinking in those agencies is more likely to be influenced by legal concerns and decisions in previous court cases arising in manufacturing and other lines of business. The field staff of the Department of Labor's Wage-Hour Division, which investigates for violations of the Equal Pay Act, likewise tends to think in terms of conditions and practices that have prevailed in industry over a long period of time.

DECISIONS ON AFFIRMATIVE ACTION PLANS

The Higher Education Division of HEW's Office for Civil Rights has been slow in approving or disapproving affirmative action plans. Some universities have waited a year or more after submitting a plan without learning whether it is considered approvable or not. Also some regional offices have rejected a surprisingly high proportion of the affirmative action plans submitted to them.

Table 8 contains interesting information with respect to the

TABLE 8 ***HEW action on affirmative action plans of colleges and universities, by regions,* November 16, 1971 through December 31, 1972***

Regional office	*Plans submitted*	*Plans given interim or final approval*	*Plans rejected*	*Plans pending*
Boston	16	1	0	15
New York	31	1	13	17
Philadelphia	4	1	0	3
Atlanta	12	0	6	6
Chicago	24	0	0	24
Dallas	25	11	5	9
Kansas City	11	0	11	0
Denver	34	8	5	21
San Francisco	32	7	8	17
Seattle	8	1	3	4
TOTAL	197	30	51	116

*Coverage of regional offices: (I) Boston – Massachusetts, Connecticut, Maine, New Hampshire, Rhode Island, Vermont; (II) New York City – New York, New Jersey, Puerto Rico, Virgin Islands; (III) Philadelphia – Pennsylvania, Maryland, West Virginia, Virginia; (IV) Atlanta – Georgia, Alabama, Florida, Kentucky, Mississippi, North Carolina, South Carolina, Tennessee; (V) Chicago – Illinois, Ohio, Indiana, Michigan, Wisconsin; (VI) Dallas – Arkansas, Louisiana, Oklahoma, Texas, New Mexico; (VII) Kansas City – Missouri, Iowa, Kansas, Nebraska; (VIII) Denver – Colorado, Utah, Wyoming, North and South Dakota, Montana; (IX) San Francisco – California, Nevada, Arizona; (X) Seattle – Washington, Oregon, Idaho.

concentrated character of the HEW enforcement program among the nation's 916 institutions of higher education that are said to be subject to federal contract compliance. Up to the end of 1972, only 30 plans had been approved and 26 of them were in three regions: Dallas, Denver, and San Francisco. The Chicago regional office had not formally approved or disapproved any plans, although some had been reviewed and 24 were pending. The Kansas City office had rejected 11 plans and approved none, and had none pending (presumably under review); New York had accepted one and rejected 13.[4] The rejection rate is surprisingly high – 51 out of 81 plans. Such unevenness in the record can be explained in part by the circumstances in the HEW regional offices, such as turnover of personnel and different conceptions of the requirements for an approvable plan.

---

[4] The author was unable to obtain full confirmation of these figures at the New York regional office, and at least two universities claim to have had affirmative action plans accepted by the New York regional office during that period. The San Francisco office claims that no plans have been approved since December 1971 so that the figure in Table 8 is questionable.

Furthermore, during the seven months from January 1, 1973, to July 23, 1973, only three additional affirmative action plans were given approval by the 10 regional offices. The other 115 that were pending at the end of 1972 were either rejected or were still pending. That is remarkably slow action. It might seem to indicate that the affirmative action plans submitted by colleges and universities are being generally subjected to fairly exacting requirements, but partly it is due to lack of expertise sufficient to judge the validity of goals and other technical aspects of the plans submitted.

The distribution of the power of approval and disapproval of affirmative action plans between the regional offices and the Washington headquarters remains unclear. The impression has been given that considerable decentralization of authority has occurred, yet letters to university presidents are said to have been held for as long as three months in Washington for official clearance. Certainly there is significant variation in enforcement demands and in decisions on affirmative action plans among the regions, apparently due in part to the personal characteristics of the leadership in the regional offices.

The instructions that regional enforcement officials give universities and colleges in connection with the findings of a compliance review, the development of an affirmative action plan, and the rejection of affirmative action plans are based on the HEW Guidelines and Revised Order No. 4. On the basis of the experience of many universities, a letter from the regional director of the Office for Civil Rights of HEW to the president of a university rejecting its affirmative action plan as submitted might include such statements (in part, "demands")[5] as the following:

> 1. The main reason for rejection of the ____________ University's affirmative action plan is lack of the required utilization analysis for female and minority-group personnel necessary to determine deficiencies and to establish goals and timetables by department or organizational unit for the elimination of all deficiencies. Your affirmative action plan must address itself to each item in Revised Order No. 4. Each department chairman

---

[5] The word "demands" is used here in a labor relations sense, because there may be some leeway or margin for "negotiations" if the university can give good reasons for its position or can explain why the requests of the regional director are not reasonable or are inappropriate.

and other officer with hiring authority is required to determine availability data for women and minorities in each discipline.

2. The required utilization analysis is necessary to determine whether goals and timetables have been accurately drawn. The Higher Education Guidelines provide that goals should be set in order to overcome identified deficiencies "within a reasonable time." In Appendix J the guidelines state: "In many cases this can be accomplished within 5 years; in others more time or less time will be required." The goals and timetables to overcome underutilization in a particular organization unit must reflect not only the number of new hires but also the projected overall composition of the faculty in that unit.

3. Provide an organizational chart covering all operations of the university. Detail all lines of authority and link the various levels of supervisory authority as they relate to employment.

4. Clearly set forth the roles, relationships, and authority of the university's affirmative action officer. Section 41CFR60-2.22 of Revised Order No. 4 delineates the duties with which the affirmative action officer should be charged. The affirmative action plan should set forth the responsibility of the affirmative action officer for monitoring such aspects of the affirmative action plan as new hires and promotion and tenure decisions.

5. Give the function, authority, and composition by race and sex of all university committees and the provision for equitable representation of the protected class members on such committees. The equal employment opportunity (EEO) committee should have the same type of authority in administering the affirmative action plan as other committees have in administering their respective programs.

6. It is necessary to develop and validate a full job description for each category of employee including faculty.

7. Give a detailed explanation of the criteria used and their relative weighting for appointment and promotion of each category of employee including faculty.

8. All selection criteria and techniques for assessing qualifications must be validated to prove that they clearly relate to job performance and do not have an adverse impact on women or minorities. Such validation is required by Revised Order No. 4.[6]

9. Analyze the composition of applicant flow by minority-group status and sex.

---

[6] Revised Order No. 4 (Title 41, Code of Federal Regulations, Part 60-3, Oct. 2, 1971, in the *Federal Register*) sets forth a definition of selection "tests" that includes various selection techniques, including "casual interviews" and "unscored personal history and background requirements," for which validation

10. Analyze the number of women and minorities considered for and granted tenure compared with nonminority faculty in the same classifications in order to make certain that women and minorities have equal opportunity for tenure.

11. Provide that the work performance of all supervisory personnel should be evaluated on the basis of their EEO efforts and results, with sanctions for failure to adhere to equal employment principles.

12. Before a contractor can be found in compliance with the executive order, it must make a specific commitment, in writing, indicating the specific steps it will take to correct any and all deficiencies. The affirmative action plan of ____________ University must fulfill that requirement in order to be approved.

Certain conclusions can be drawn from such statements. One, HEW enforcement officers generally think and act within the framework of the concepts and requirements of Revised Order No. 4, on which the HEW Guidelines are based. Their efforts are to a considerable extent directed at inducing universities and colleges to have their operations, including faculty, conform to the industry pattern of authority, employment practices, and personnel management.

Two, HEW enforcement officers in some regions seek to make numerical goals and timetables by department or "hiring unit" a key element in affirmative action programs, including for faculty, regardless of the size or appropriateness of the department. The authority structure they tend to favor conflicts with the collegial or faculty system of shared responsibility in decision making by mature teacher-scholars. The HEW enforcement officers, interested in certain results more than in procedures to assure the best professional judgments, seem desirous of enhancing the authority of a university's newly appointed equal employment opportunity officers and coordinators, who, for the most part, have not been drawn from the faculty and are not responsible to the faculty.

Three, the HEW enforcement officers seek to induce greater use of women and members of minorities on committees, in administrative activities, and in other internal governmental functions.

---

may be necessary. Where there are "data suggesting the possibility of discrimination, such as higher rates of rejection of minority candidates than of nonminority candidates for the same job" or where there is "underutilization" of minority-group personnel in certain types of jobs, validation studies must be made or the conditions suggestive of employment discrimination must be eliminated.

They apparently do not appreciate that heavy involvement in such activities can significantly reduce the time and effort that a faculty member is able to devote to teaching and scholarship and, thus, can have adverse effects on their qualifications for advancement as teacher-scholars.

Four, the HEW enforcement officials apparently do not appreciate that some of the instructions they give universities (based on the industrial model of Revised Order No. 4) are not appropriate for a system of faculty self-government. Partly for that reason, the data are costly to develop.

Five, through their power to approve or disapprove affirmative action plans, HEW enforcement officials are, either consciously or unconsciously, attempting to alter the structure of authority and governance in universities in line with the industrial model embodied in Revised Order No. 4. In doing so, they are tending to undermine faculty self-government, to create conflicts of group interest within universities and, as was explained in the preceding chapter, to expose universities to new liabilities under the federal and state antidiscrimination laws.

Six, too often the resulting provisions in an institutions's affirmative action plan are the result of negotiations by persons with different conceptions and objectives. The resulting document is, therefore, likely to be a compromise between university principles and government guidelines.

It is said that HEW enforcement activities have led to improvements in the industrial relations programs of universities, especially for nonacademic personnel, for whom universities have had to modernize their programs of personnel management. That is true in many cases, and undoubtedly represents some benefit or improvement in certain institutions. However, one should not overlook the costs involved in preparing and negotiating approvable affirmative action plans and the effects that government regulation seems likely to have on the effective operation of universities in the long run if present policies continue.

The kinds of programs for governance and for staffing decisions that universities should have in academic and in nonacademic operations is a question that neither the universities nor the government have fully analyzed and answered. It is becoming more and more difficult to maintain a significant difference between the academic system and the system of hierarchical authority in nonacademic employment. This subject is considered in some detail in the next chapter.

THE INCREASING INTRICACY OF REGULATION

For individual universities, each successive affirmative action plan is much longer, more detailed, and more interventionist than the previous one. Disapproval of a plan inevitably means that the university is instructed to provide a still more elaborate plan, and approvals are often accompanied by instructions to supply even more details and additional provisions of substance.

Expansion of government regulation is almost an inevitable development. Growth in regulatory activity is especially likely to occur with respect to faculty employment in major universities because the HEW civil rights officials are trying (1) to apply the industrial model to university faculty where it does not fit, (2) to determine "deficiencies in the hiring and promotion of minorities and women" by a technique that in practice has serious deficiencies for that purpose, (3) to use a concession negotiated at one university as a pattern to spread to others, and (4) to alter the distribution of influence and authority for faculty hiring and promotion in line with the concepts and assumptions of Revised Order No. 4.

The way that regulation tends to expand can be illustrated by an example. On May 1, 1973, Harvard submitted to the HEW regional office its third affirmative action plan. The previous two had been submitted in February 1970 and November 1971. In mid-June, Harvard received word that this plan was rejected as "inadequate and unresponsive to the Executive order," because it did not include a "utilization analysis" and a numerical goal for each of 30-odd departments in the arts and sciences. Harvard then submitted at the end of July a five-volume plan in line with the HEW instructions.

In mid-November, the HEW regional office notified Harvard that its plan was "an acceptable standard upon which the University can build and implement an effective affirmative action program" (*Harvard University Gazette,* 1973). However, HEW asked Harvard to develop and submit material on 10 items "for future inclusion" in its plan with a view to "building a truly comprehensive program." Among the 10 items (all said to be "required by Revised Order No. 4") were the following five:

1. Develop a Salary Equity Analysis as per Attachment [see Exhibit 1] for Minorities and Women.
2. Develop and submit job descriptions for every category of employment, especially for Exempt Employees and for Faculty by Department where these have not been previously submitted.
3. Develop and submit detailed criteria for selection and promotion for

each job category and for faculty by rank by department where these have not been previously submitted.

4. Validate all tests presently used in selection, upgrading, or promotion.

5. Develop a comprehensive program to increase the number of minority and female contractors and vendors.

By requiring the first four items, HEW is insisting that the techniques of job analysis and evaluation used in industry be applied to the hiring, promotion, and pay for Harvard faculty in the arts and sciences where they are not likely to be appropriate. As explained in Chapters 2 and 3, the tenured faculty of a leading university like Harvard are usually hired and paid on the basis of their personal distinction as teacher-scholars in their fields and not according to the contents of their "job." Their job content could be essentially the same as that of a number of assistant professors in the same department or the university. If detailed job descriptions are requested, they might be different for each faculty member and change as his or her teaching and research changed. Such detailed descriptions would indicate the unique characteristics of each distinguished professor, whereas the exercise is based on common characteristics and classifications.

The development of detailed criteria for the selection and promotion of faculty by rank and by department (with set weights for each criterion according to the salary equity analysis scheme in Exhibit 1) also is not suitable for direct application to the tenured faculty of major institutions. The primary criteria for appointment or promotion to tenure in major institutions are teaching and scholarship at the highest level. For different positions more weight may be put on one or another of those criteria but, as has been observed, completely separate consideration of each is incorrect as they are reinforcing and combine in human-capital building. A separate set of criteria for each department of the arts and sciences is generally considered unnecessary and undesirable.

A HEW request that a university "validate" all tests used in selection and promotion, if interpreted to cover faculty procedures, raises a host of serious questions. As indicated in the preceding footnote, Revised Order No. 4 contains such a requirement but it has not yet been widely applied to university faculty. As this is written in January 1974, a set of proposed regulations entitled "The Uniform Guidelines on Employee Selection Procedures" has been circulated for comment prior to publication in the *Federal Register* and application. The 27-page document, developed by the

Equal Employment Opportunity Coordinating Council of the federal government,[7] would not only regulate tests for aptitude and mechanical abilities but also any and all techniques used by employers to judge employees' relative qualifications for appointment and advancement. It is assumed in Washington that faculty appointments and promotions would come under the "uniform guidelines." That would involve government regulation enforced through insistence of "validation" of all means for judging the qualifications of teacher-scholars for particular openings. Those means include résumés stating one's educational credentials and record of work experience, scholarly publications, evaluations of applicants' published research results in professional reviews, systematic student evaluations of teaching, letters from prominent professors in a subfield giving their comparative evaluations of possible candidates, the unstructured interviewing of candidates, a lecture or seminar given by a candidate, etc. For each selection device, the burden of proof is placed on the federal contractor to prove lack of sex or race bias—no deviation from proportionality measured from some base. It is not clear how far HEW is asking Harvard to go into that thicket.

The salary equity analysis set forth in Exhibit 1 would, for faculty of major institutions, be quite unsatisfactory, and would be on a completely different basis from that used in enforcement of the equal-pay legislation. Essentially it is a crude six-factor analysis, with such gross data as "number of publications" and "number of committees"[8] on which the individual serves. As was explained in Chapter 3, use of 30 factors or variables in multiple-regression analysis to try to discover the extent of sex discrimination in faculty salaries is open to serious question and error. Years of faculty experience are subject to the differences that Johnson and Stafford's salary analysis demonstrates. For HEW to instruct Harvard to make salary equity analyses for women and minority persons according to the method and factors stated in Exhibit 1 indicates a

[7] The council agencies that drafted the document were the Office of Federal Contract Compliance of the Department of Labor, the Equal Employment Opportunity Commission, the Civil Rights Commission, the Civil Service Commission, and the Department of Justice.

[8] The inclusion of "number of committees" as one of the six factors is interesting. It is not included in the 30-odd variables used by Scott or Astin and Bayer. Among the requests to Harvard in HEW's letter of acceptance is a statement that "in line with the requirements of Revised Order No. 4," "each faculty" at Harvard should have an "affirmative action committee" with minority-group members and women who would "have a role in monitoring all appointments."

serious lack of understanding of the problem. Certainly it would be unsound to conclude that the "differential" so calculated "should be discriminatory."

The 10 items involve fundamental issues of administration and procedure. Yet Harvard was instructed as follows:

> We are aware of the necessary time constraints in developing satisfactory responses to each of the above items but would ask that a timetable be developed and submitted for each item detailing the proposed methodology for accomplishment of the task and the person or persons responsible. We will expect a response and commitment to the above within the next ten (10) days.

Obviously, those instructions assume no faculty participation in the decision with regard to the acceptance of items that could have a profound effect on faculty procedures and self-government. Within 10 days is hardly time for any serious consideration of such demands by the faculty of arts and sciences and the professional schools under the collegial system of shared responsibility.

AN IMPOSSIBLE TASK

In the midst of all this regulatory activity, the field staff of the HEW Office for Civil Rights has been given an almost impossible task. It is supposed to determine whether 916 colleges and universities, out of a total of approximately 2,500, are in compliance with Revised Order No. 4 and the HEW Guidelines. That is an average of about 16 institutions for each of the 58 field staff in the Higher Education Division of HEW's Office for Civil Rights.

The methods HEW uses for judging compliance or noncompliance are (1) on-site investigations, (2) negotiation with universities and approval or disapproval of their proposed affirmative action plans, (3) analysis of statistical reports and explanations from institutions, and (4) inquiries of the institution based on charges of discrimination affecting groups of employees, which are sent in to the regional offices from various sources. It is by such means that HEW's regional offices are supposed to determine whether the insitution is in compliance and whether it is using "good-faith efforts" to make an approved affirmative action plan work.

The HEW field staff generally do not have sufficient knowledge and experience to judge how appropriate numerical goals are for different academic departments in the arts and sciences in particular universities. They cannot be expected to know the demand and supply situation in each academic discipline in order to judge what numerical goals, if fulfilled, would or would not require reverse discrimination against white male faculty under the Civil Rights Act or equal-pay laws.

It is not surprising, therefore, that HEW "letters of findings" following on-site compliance reviews, or letters giving instructions with regard to substantive changes in proposed affirmative action plans, contain remarks that reveal lack of understanding of the way universities and faculty members operate. Also, it is not surprising that HEW refuses to accept responsibility for any action that a university takes in compliance with HEW Guidelines and an approved affirmative action plan.

The difficulties of the task assigned to the field staff are greatly enhanced by the deficiencies in the HEW Guidelines. Basic for reasonable and sensible enforcement with the kind of staff HEW can and will recruit is a less complicated and more suitable set of guidelines for affirmative action by universities and colleges. Proper guidelines for higher education would mean that university faculties at least, should no longer be regulated according to the provisions of Revised Order No. 4, which assumes the industry model of employment.

ONE REGULATORY STAFF FOR ALL MAJOR UNIVERSITIES

It is particularly inappropriate to have major universities divided among the regional offices for purposes of compliance review and determination of affirmative action requirements. Insistence that major institutions negotiate their numerical goals and administrative arrangements with the regional office staff, one at a time, is bound to mean unequal, inconsistent, and rather arbitrary treatment of universities, which are not regional but worldwide in reputation, drawing faculty and students from throughout the country and internationally.

To require the three or four dozen major universities to deal only with and through a regional staff is not sensible or appropriate for the following reasons: (1) four years of experience (1970 to 1974) have demonstrated that regional units vary widely in their understanding of how major universities operate, and need to operate, in their compliance practices and demands, and in the pace of their decision making; (2) the major universities compete nationwide for students and faculty (with significant numbers coming from abroad), they train most of the Ph.D. pool for the nation, and their faculties contain most of the outstanding teacher-scholars in the nation and are oriented to a considerable extent by discipline internationally; (3) the problems that major universities encounter under affirmative action and the contributions they can make to improve supply deficiencies of minority persons and women are similar and could be better handled by a cooperative approach on a national basis; (4) it is especially important to preserve the independence and effectiveness of the major universities because of the quality of their research and instructional contributions and their leadership in the academic world. There is need for HEW to explore the idea of joint planning for affirmative action with the major universities—planning on a cooperative basis for constructive purposes while recognizing institutional independence and differences.

It is unfortunate that certain HEW regional staff have insisted that one or more major universities conform to a certain set of affirmative action requirements, whereas directly competing institutions located in other regions, for a variety of personal and other reasons, have not been subjected to the same kind and intensity of federal regulation by HEW regional staff. Apparently, the regional offices have the power to reject proposed affirmative action plans but regional approval of a plan can be given only after Washington has approved the regional office's recommendation. By the time the regional office recommends approval to Washington, however, the regional staff has molded the plan in line with its views through the demands it has made and the negotiations it has carried on with the institution, sometimes backed by statements on what Washington will or will not approve.

National handling throughout by a single staff well versed in university operations would eliminate much of the arbitrary and inconsistent actions by regional offices and could help to develop a more constructive attitude and more intelligent programs. Single-staff handling of affirmative action plans for major universities is presented in Chapter 9 as part of a proposed program for government enforcement of nondiscrimination in faculty employment.

EXHIBIT 1: SALARY EQUITY ANALYSIS[9]

A salary equity analysis is required for all employees. The purpose of this is to determine whether or not employees engaged in similar work are paid different salaries due to their race and/or sex. To accomplish this it is necessary to determine if there is a salary differential and if that differential is actually the result of discriminatory practices rather than "bona fide" criteria. This analysis must be preceded by three (3) steps:

---

[9] This salary equity analysis is from "Attachment A" to a letter from John G. Bynoe, Regional Civil Rights Director, to President Derek C. Bok, Harvard University, dated Nov. 12, 1973, accepting Harvard's affirmative action plan.

1. The development of detailed job position descriptions for each employee.
2. The validation of job position descriptions against the actual work performed by the employee or employees covered by the description.
3. The collecting of all job position descriptions into appropriate job classifications.

(These three (3) steps are covered in another part of this document.)

There are five (5) steps to accomplishing a salary equity analysis:

1. Establish all criteria relevant to a position.
2. Set weights on each criteria which reflect the relative importance of each criteria to the position. These weights should approximate as closely as possible the actual proportion of their values.
3. Do an aggregate comparison of white males and all females in each job position using means for each criteria and showing the means for annual salary increases and current salary.

Show in this comparison the percent of the female mean to the male mean for each criteria and salary increases and current salary. Do the same type of comparison for majority group members and minority group members in each job position. Following is an example of this comparison for males and females.

EXAMPLE A

Criteria	*White Male*	*Female as % Male*	*All Female*
1. years at institution			
2. years in current job classification			
3. education level			
4. years of job-related experience			
5. number of publications			
6. number of committees			
Average annual salary increase			
Current Salary			

4 Validate the originally assigned weights according to the results of the aggregate comparisons for all white males in a position and adjust the weights accordingly to the final comparison. List criteria in descending order according to weight. These adjusted weights will appropriate the actual proportion of their values.

5 Compare each female to the white male with closest total weighting. Compare average annual salary increase and current salary. Do the same for each minority group member in each job position.

Female employees or minority employees with comparable weighed qualifications should have comparable salaries. If in the instance of equivalent standard point totals, the actual salaries are not equivalent, the differential should be considered discriminatory and the burden of proof shifts to the college to explain the differential. This must be explained in a narrative. Also, if the qualifications and standard value totals are similar but not equivalent, the system can be used to ascertain which portion of a difference in salary could be considered bona fide and which discriminatory.

8. *Government Regulation and University Effectiveness*

A university typically operates two different types of governing and personnel systems—one for faculty and the other for the supporting staff (clerical and administrative employees, food service personnel, grounds and building maintenance workers, and many others).

The faculty, or academic, system is characterized by collegial decision making by a community of scholars. It is basically democratic. Individual faculty in a department, school, and the university as a whole enjoy essentially the same professional rights and freedoms. In their teaching and research, most of them are fairly free from any direction and supervision by a management structure of authority.

For the most part, the supporting staff is subject to supervision and direction under a hierarchical authority system, similar to the governing arrangements in industry and in the administration of federal and state programs. In contrast to the largely democratic, self-directed system for faculty, the supporting staff is subject to a pyramid-type management exercised largely from the top down through a loose chain of command, with each level of operation under the supervision of, and subordinate to, the level above. It is understandable that many in the supporting staff of universities, and particularly professionals in research and library operations who consider themselves academics, have sought to achieve many of the privileges, freedoms, and self-governing advantages that faculty enjoy. Thus, features and practices of the faculty system have tended to spread into some nonfaculty areas, especially those where professional employees are in leadership positions.

Government programs of antidiscrimination enforcement have been designed and based on the industry-government model of personnel practice and authority. On bureaucratic grounds, rather uniform application of a regulatory program is generally considered essential for effective enforcement. University faculty are, of course, only a small fraction of the total coverage of such programs and generally constitute well under half of the university's own employment. Consequently, government compliance personnel, with backgrounds in business or government, cannot be expected to be interested in preserving and strengthening the faculty system of governance. Instead, as will be explained subsequently, through the rather inflexible application of rules designed for industry-model situations, their actions tend to weaken the faculty system and strengthen centralization of authority and control within the university. Thus, outside pressures are exerted in the name of antibias regulation that tend to undermine a system of work arrangements for faculty that nurtures independence of thought, creativity, and work satisfaction and has features that industrial relations specialists consider as part of the more meaningful and satisfying work life envisaged as a goal for industry in the future.

This chapter examines the implications of government regulation of universities under antibias enforcement based on the industry model. The faculty system will be discussed in terms of its significance for effective university operations and the problem of maintaining institutional integrity that arises with two different systems of governance and personnel practice in a university.

THE FACULTY SYSTEM AND INSTITUTIONAL INTEGRITY

As explained in Chapter 2, a university's reputation and contributions depend on the caliber of its faculty. The excellence of its faculty is likely, in considerable measure, to hinge on working arrangements that faculty find congenial and on rewards according to individual merit as judged by colleagues in the discipline.

The conditions that faculty in major universities consider ideal for their work satisfaction are in sharp contrast to the way business enterprises or government bureaucracies function. Distinguished faculty stress: (1) self-determination in their teaching and research, (2) departmental self-government through peer sharing of responsibility for the department's management and personnel decisions, and (3) professional evaluation of individual merit and performance, with reward according to such evaluation.

A large measure of professional responsibility for the staffing of academic departments is obviously necessary in major universities. It is unlikely that others in administrative positions (for example, the president, the provost, the deans, or the chairman of the university research board) would be competent to assess the comparative contributions that a distinguished scholar makes in his or her disciplinary specialty. They can, of course, and often do, participate in reviewing the documentation (including evaluations) submitted by a department in support of a proposed appointment or promotion.

The academic department, usually discipline-oriented, is the basic unit of organization in the arts and sciences. It is a loosely organized community with decisions made by collegial consent. There usually are no lines of authority within a department. The chairman, whose selection customarily involves consent of the professors in the department, is not in a superior or supervisory position compared with other faculty and may not enjoy as much intellectual authority in the department or the university as some other more academically prestigious members of the department. Also chairmanships are usually not held for more than two to five years, as teacher-scholars find that administrative duties cut into the heavy time-demands needed for maintaining distinction as a teacher and a scholar in a rapidly moving field. Because, in faculty matters, intellectual leadership rather than authority of position is important in decision making, HEW regional-office requests that universities include in their affirmative action plans an organization chart with lines of authority for faculty show a misconception of how faculty do and should function in major universities.

The collegial organization of department and university faculty provides each member with wide scope for individual initiative, for self-direction, and for professional creativity of a high order (Anderson, 1973). Academic freedoms, the academic work conditions, and the association with professional colleagues and able students serve to make a faculty career attractive to creative minds.

The nonacademic supporting staff has a regular scheduled work week, is directed by supervision during that period, and is subject to the discipline that goes with managerial authority. Selection among applicants for a nonacademic opening is usually made by one or more higher level administrators or academics serving in an administrative capacity. Supporting staff, except high-level administrators and professionals, are likely to be subject to many of the personnel practices in industry such as job descriptions, job evaluation, wage and salary administration, and performance appraisal by the supervisor. Nonacademic employees usually do not have tenure, paid leaves of absence for a term or an academic year, or vacation periods that amount to three or four months a year.

Many universities and colleges have sought to have certain items common to both faculty and supporting staff. For example, both may be covered by the same retirement, hospitalization, and other insurance programs. Dollar pools for annual wage and salary increases may be the same percentage of payroll for both, so that they have an identical average increase in percentage terms. However, the method of determining individual increases and the shape of their distribution statistically may be quite different.

The operation of two distinct systems of employment management and work life in a university can lead to misunderstanding and claims of apparent inconsistency and discrimination in status. The necessary differences between the two systems are not well understood and appreciated by government enforcement officials who lack academic experience. It is difficult, for example, for some government officials to appreciate that, with faculty, rank is based on individual qualifications and contributions and not job content and that a faculty member's job content usually does not change a bit with promotion to a higher rank. In contrast, promotion in industry and nonprofessional employment in the supporting staff of a university generally involves a change in job content—job levels and rates of pay are geared to the content or requirements of the job.[1]

The faculty compare work conditions, pay, and benefits with corresponding faculty in competing institutions throughout the country. For terms and conditions of employment and work management, most of the supporting staff generally are oriented toward corresponding work opportunities in industry in the local area for maintenance craftsmen, food-service workers, clerks and secretaries, and similar occupations.

The operation of two distinct systems of work management—one basically democratic and nationally oriented, the other mainly governed under hierarchal authority and locally oriented—can cause strains on grounds of unequal treatment and raise questions of institutional integrity.

[1] Edwin Young, chancellor of the University of Wisconsin at Madison points out that to tie faculty salaries to job descriptions and job content would "destroy" a major university's "ability to attract and reward the indispensable scholars and teachers." See Young (1973, p. 202).

Allegations of inequity and challenges to institutional integrity are stimulated by the existence of a third separate and different system for part-time student employment in the university, both in supporting services and as assistants to faculty in research. Generally, student employment is administered under student aid, so that it is not part of either the faculty or the supporting-staff employment systems. Hiring arrangements, pay levels, and record keeping for student work are usually handled separately from the other two systems.

In practice, personnel administration and management supervision are likely to be more mixed in character among supporting staff than the foregoing description may imply. Universities have been slow to adopt uniformly the systematic programs and techniques of personnel management found in most business corporations. Partly that has been because many of the supervisors of supporting staff are faculty who serve as chairmen of academic departments, academics who are directors of research programs or projects, and other professionally trained persons who perform supervisory functions as librarians, medical doctors, lawyers, architects, and electrical engineers running computer centers.

Both faculty and nonfaculty professionals are apt to be influenced in their thinking about management and personnel practices by the faculty system. In recent years there has been a definite movement on the part of some nonteaching professionals (for example, professional librarians and professional research staff) at universities to achieve more of the privileges and self-governing features of faculty life. Members of the professional research staffs have especially coveted the prestige and job security of faculty status. In addition, the development of university senates or councils composed of members selected from the administration, faculty, supporting staff, and students, who serve as part of the structure of university governance, is a further development toward participatory democracy for nonfaculty sections in the university.

Enforcement agencies (especially some HEW regional offices) and interest groups have put pressures on universities for uniformity of treatment for all employees. Through compliance reviews, complaints of discrimination filed with government agencies and the courts, and the threat of sizable liabilities under equal-pay laws, universities and colleges have been shocked into examining and improving their personnel policies and practices as applied to supporting staffs, especially from a legal viewpoint. The improvements have included good procedures for handling employee grievances and well-considered leave of absence arrangements. Unfortunately, government compliance officials may fail to appreciate that rules and practices suitable for the supporting-staff system of personnel management may not be appropriate for invariant application to the quite different work arrangements and work conditions for faculty.

GOVERNMENT PRESSURES ON THE FACULTY SYSTEM

Government agencies, through their directions, administrative rules, Executive orders, and oral and written inquiries and demands, try to move institutions of higher education toward the industry model in their academic operations. Government regulation is, for the most part, applied in a fairly uniform fashion to the two quite different systems of faculty and supporting staff.

The principal difficulties for universities with respect to faculty are (1) that HEW's administrative requirements for institutions restrict faculty self-determination and encourage pressures by minority and women interest groups, (2) that the federal government's increasing pressures for "validation" of faculty methods and techniques of selection[2] for faculty appointments and promotions calls into question the system of professional selection by mature teacher-scholars in a discipline and favors use only of methods that assure equality of results to be calculated on an uncertain base[3] and (3) that the application of equal-pay laws, which focus on the characteristics common to particular jobs rather than on the unique characteristics of individual teacher-scholars, tend to stress minimal qualifications for promotion and to undermine the merit system of faculty pay. Back of all these difficulties with government requirements is the underlying assumption that discrimination in employment will somehow disappear if only proportional representation for minority groups and women across the faculty board is forced on universities.

[2] As explained in the preceding chapter, validation for nonbias can be requested in connection with the use of any device or criterion (several are usually used together for screening purposes) such as résumés of education and experience, comparative evaluations by former teachers and leading scholars in the field, evaluation of the person's scholarly publications, student questionnaire evaluations of teaching in courses, results from interviewing the person, evaluations of a lecture or seminar given by a candidate.

[3] The persons to be included in the base or universe from which deviations from proportionality are to be calculated (total applicants for a position or only persons selected by some standard?) is usually unstated and unclear; this permits arbitrary application of the requirements. Total applicants could be a quite biased base.

The HEW Guidelines specify a required administrative arrangement for the implementation of an affirmative action program. An "executive," who "should be a person knowledgeable of and sensitive to the problems of women and minority groups," must be appointed "director" or "manager" of EEO programs. The establishment of one or more committees or task forces, "composed in substantial part of women and minority persons" is suggested to facilitate "the task of the EEO officer" and to enhance "the prospects of success for the affirmative action program in the institution."

The HEW Guidelines refer to Revised Order No. 4 for a statement of the activities and responsibilities of the EEO director. As stated there they include: development of "policy statements" and "affirmative action programs"; serving "as liaison between the contractor and enforcement agencies"; serving "as liaison between the contractor and minority organizations and community action groups concerned with employment opportunities of minorities and women"; having "active involvement with local minority organizations, women's organizations, community action groups and community service programs"; and reviewing "the qualifications of all employees to insure that minorities and women are given full opportunities for transfers and promotions."

Many universities have followed those instructions and suggestions, establishing a new position or positions in the office of the president, chancellor (provost), or both, and also establishing a universitywide committee or two (one for minority-group affairs and one for women's affairs) to aid the EEO officer (and the coordinator or director for women's affairs where there is such an office). In universities, persons appointed as EEO director or coordinator seem generally to be blacks or women. The EEO officer on his or her own authority, or with the support of the EEO committee, is likely to be able to influence recruitment procedures for faculty and supporting staff, to review actual recruitment in individual cases with respect to compliance, and to postpone or block action on a department's recommendation for a faculty appointment. It is understandable that a HEW regional office, in reviewing and negotiating with a university about a proposed affirmative action plan or developments under it, may be concerned with the actual authority that the EEO officer and/or the committee may have "to initiate and enforce remedies to problems or deficiencies." HEW seeks to have that person play a significant part in the compliance program.

In their capacity as liaison with HEW and other enforcement agencies, it may sometimes be unclear to what extent EEO officers are agents of the university and agents of HEW or other organizations. A black or female EEO officer can perform an important educational function within the university because of the experience he or she may bring to consideration of a problem or policy. However, insertion of another layer of administration with power to exercise a measure of influence and control over faculty appointments and promotions is likely to mean some restriction and restraint on the faculty system of professional evaluation and selection of faculty in a discipline and to result in additional centralization of power and control in the university.

Administrative pressures by HEW to make faculty selection and pay structures conform more closely to the industry model are also exerted through such means as (1) insistence that methods for the selection and promotion of faculty be validated on the basis of proportionality of results, (2) attempts under equal-pay enforcement to use job content rather than the individual's intellectual qualifications for specialized tenure positions in major universities, and (3) insistence that affirmative action numerical goals be calculated according to the prescribed method of an estimated labor market pool of qualified and available persons applied to all academic ranks and specialties. In such matters, HEW and other enforcement agencies have been prone to deny or disregard essential differences between the faculty system and the industry system.

The requirement that a university validate the selection methods used for faculty as well as supporting staff shows how the federal government may force the use of concepts from industry practice that are often ill-suited and of questionable validity when applied to faculty and faculty procedures. HEW compliance officials may insist that a university must, nevertheless, apply a test of proportionality of result to each element in the complex process of selection to fill a tenure opening by promotion from within or appointment from outside.

A part of federal effort to eliminate discrimination in employment is the provision that only elements proved not to have a biased impact on hiring and promotion can be used in selection for appointment or advancement. Sample surveys indicate that, due to affirmative action requirements and antidiscrimination legislation, a high proportion of business firms altered their selection criteria and revised their testing programs, changing or eliminating the use of preemployment tests and educational requirements that could not be closely related to performance on the particular job.[4]

As Chapter 2 explained, the criteria used in the selection of faculty—teaching, research, and other service to department and university—as applied to a particular professorship in a major university are likely to involve quite special and unusual qualifications, including a high degree of scholarly creativity. Consequently, university procedures place heavy reliance on the judgment of mature teacher-scholars in the discipline or subfield of the discipline, based on a variety of sources of information and evaluation.

The material used in the selection of a new faculty member would normally include: comparative analysis of the candidates' résumés showing their pertinent experience and accomplishments; letters from faculty in the field evaluating a candidate's relative standing and promise; student evaluations of various aspects of the individual's teaching in courses; critical reviews of the person's published and unpublished scholarly work; and conclusions of members of the department from personal interviews, from a class or seminar or lecture given on the campus, or from a paper delivered at a professional meeting. On the basis of such information and assessments, perhaps reviewed first by a search or screening committee that reports to the department, the tenured members of the department meet, discuss the relative merits of various candidates, and select a first choice and possibly a second one in case the top-ranking candidate rejects a proposed offer.

Evidently, it is practically impossible to validate in a formal manner each element in the procedure and the procedure as a whole, in order to prove that no part has a disproportionate impact on any group. Each item or source is designed to provide more complete information and to check on information or assessments from other sources. Elimination of the use of one or more sources because of an alleged disproportionate impact by sex, race, religion, or national origin would not be likely to lead to a more intelligent or objective result. Basically, a system of professional, peer-group analysis and selection involves reliance on the process if the procedures are properly followed and if those participating in the process are well qualified to make professional judgments in that field.

---

[4] See, for example, "Survey by BNA, ASPA Shows Impact of Equal Opportunity Requirements" (1973, especially p. C4). The sample consisted of 113 member firms of the American Society of Personnel Administration and was conducted by the Bureau of National Affairs.

Requests by compliance officers that standard tests used, say, in the selection of manual and clerical workers in a university's supporting staff be validated to make certain they contain no cultural or other bias are understandable as a part of enforcement of nondiscrimination in employment. The same is true of the requirement that a high school diploma is needed for the proper performance of low-level manual jobs.

However, a similar requirement for "validation" of the elements in the procedure for faculty selection and promotion may really involve a demand for radical change in the whole system of faculty selection. And it places in the hands of regional compliance officers a power of intrusion that can be quite arbitrarily applied one way to some institutions and rather differently, if at all, to others. Indeed, to require similar validation for faculty in major institutions is to question the very system of faculty self-determination.[5]

In a similar manner, the faculty system of compensation by relative merit, as determined by professional evaluation of individual performance and promise, is threatened by application of the concepts in the Equal Pay Act, which was extended to professional employees in mid-1972. That act requires the same rate of pay for men and women doing substantially similar tasks in the same place of employment. The act makes job content the controlling factor in determining compliance, and, thus, is difficult to apply to variations in the quality of intellectual performance and creativity.

Equal work is measured in terms of equal skill, equal effort, equal responsibility, and similar working conditions. These are all job traits. Again the government regulations with respect to sex discrimination are based on the industrial model, and are, therefore, ill-suited for faculty conditions and practice. As already explained, assistant, associate, and full professors may have the same job content in the department or in several departments. They may all teach at the same levels and be engaged in the same type of research. Their promotion from one rank to another is not based on a difference in job requirements so much as on the intellectual level of the teaching and research contribution and the corresponding academic reputation of the individual. The highest paid professor may be a person who has been in the same rank for 30 years. The base salary of department chairmen may be their regular salary as professors. On job-content grounds, professors of nuclear physics, economic theory, classics, and home economics might all seem required to have the same salary under equal-pay legislation.

---

[5] The HEW Guidelines (Office for Civil Rights, 1972, p. 10) refer to "the validation of all criteria for promotion." Revised Order No. 4 (par. 60-2.24*b*) states: "The contractor should validate worker specifications by division, department, location or other organizational unit and by job category using job performance criteria. Special attention should be given to academic experience and skill requirements to insure that the requirements in themselves do not constitute inadvertent discrimination. Specifications should be consistent for the same job classification in all locations and should be free from bias as regards to race, color, religion, sex, or national origin, except where sex is a bona fide occupational qualification. Where requirements screen out a disproportionate number of minorities or women such requirements should be professionally validated to job performance."

Government regulation to eliminate sex discrimination in pay can result in a civil-service-like system of compensation for university faculty, with each rank defined in terms of minimum standards of skill, effort, and responsibility, and with specified pay grades within the rank through which the faculty member moves according to length of time in that rank or according to some other "objective" criterion.[6] In other words, application of equal-pay regulations can pose a threat to university methods and procedures for rewards and incentives for faculty.

The application of federal equal-pay legislation to university faculties raises another serious problem as a consequence of the demand for minority-group faculty stimulated by numerical goals in affirmative action plans. Many universities, in order to try to attract black faculty, have offered them salaries considerably above those for equally qualified white male and female faculty. Thus, in yielding to HEW pressures, those institutions have exposed themselves to a claim of unequal pay between some men and women. Under the law the women have grounds for lodging a formal complaint of sex discrimination, under which their pay would have to be brought up to the comparable level for black males. In turn, the white males could lodge a complaint of sex discrimination, under which their pay would be raised to that of white women.

Such a process is beginning to occur in certain institutions. It reveals the inconsistencies in the policies and in enforcement practice among different agencies of the federal government. Universities are being exposed to considerable cost for complying with the incompatible policies of government agencies under antibias legislation and contract compliance. It is understandable that university administrators and faculty are disturbed by confused signals from government in these matters.

---

[6] Sheldon E. Steinbach (1973, p. 52) points out such implications if present equal-pay regulations are applied to academic as opposed to nonacademic personnel. See also "Equal Pay in Higher Education . . ." (1973).

THE PREDICAMENT OF UNIVERSITY ADMINISTRATORS

The application of government antibias programs to university faculty and supporting staffs has put many university presidents and top academic administrators in a difficult position. Generally they are—like most faculty—in full sympathy with the objectives of enlarging the opportunities for disadvantaged members of minorities and women to acquire adequate training for academic appointments, of expanding the scope of search for faculty, and of making the university's climate congenial for minority-group and female personnel. Most of them genuinely would like to be able to increase the minority-group and female component of the faculty.

A significant proportion of the presidents and top academic administrators have guilt feelings because studies have shown that some women in the faculty and supporting staff were being paid less than men for equivalent work. The central administration could be charged with condoning sex discrimination in such instances, because steps had not been taken earlier to eliminate such sex differentials, failure to do so being due perhaps to lack of attention and ignorance of the facts or to a belief that paying "the prevailing wage in the market" was a proper wage policy (Lester, 1948, pp. 13–17, 38–41).

With general charges of discrimination being made against most major institutions, university administrations and faculties moved to take corrective actions with respect to any proved discrimination among faculty or supporting staff. Corrective action was accelerated by pressures exerted by interest groups (in the student body, the faculty, the supporting staff, and outside organizations). Also, individual and class complaints were filed with federal and state agencies and the courts. Women's liberation was on the move, especially in the universities and colleges.

Some university administrators and faculty in 1972 and 1973 expressed concern that various pressures were being exerted on universities to force discrimination in favor of minority groups and women, to have institutions hire and promote some who were not the best qualified in order to rectify past race and sex discrimination. But top administrators of many universities, especially some large state institutions, were not in a strong position morally, politically, or legally to resist pressures for preference in hiring in view of past history, faculty and student opinion, the HEW Guidelines, and regional-office demands.

Morally, many university administrations and faculty were on the defensive. In some institutions, members of the faculty and/or supporting staff had received from their university "equity compensation" in response to their claims of sex discrimination or (rarely) race discrimination. In addition, the institution might seem to have admitted guilt when, according to government order, it calculated "deficiencies" and adopted numerical goals designed to eliminate those deficiencies. The invalid suppositions that underlie many calculated hiring goals have been fully explained in preceding chapters. Nevertheless the government scheme for hiring goals, by attributing all blame for sex and race disproportionality in a faculty to the demand side, puts university administrations and faculty under the burden of self-calculated sex and race bias.

University administrators were also in a weak public-relations position. Generally, they and their faculties favored federal action against race and sex discrimination in employment. It would have been difficult for them then to argue that antidiscrimination regulation under federal contracts was appropriate for industry but not for universities, or was possibly appropriate for the supporting staffs of universities but not for faculty, especially faculty of major institutions. That would leave them open to charges of elitism in a general climate of opinion favoring egalitarianism. Furthermore, the kind of analysis necessary to demonstrate the inappropriateness of numerical hiring goals for tenure faculty positions in distinguished universities or the inappropriateness of availability analysis and numerical goals with timetables, academic department by academic department, would be too complex and abstruse to be convincing to the general public.

Politically, the universities have also been in a weak position. They have found it difficult to take a strong, consistent stand, because the nature and timing of the impact of antidiscrimination enforcement has varied so widely among individual community colleges, four-year public colleges (some of which were former teachers colleges), four-year private colleges, and public and private universities. The associations of universities and colleges headquartered in Washington have, therefore, had trouble presenting a common front to the Nixon administration and Congress. With federal enforcement spread among four federal agencies (really 10 regional offices for HEW) and possibly between two state agencies (as well as the federal and state courts) and with enforcement action applied one institution at a time, the universities have been unable to marshal forces for more appropriate guidelines for governmental programs of antidiscrimination as applied to university faculty. In 1972 a number of university officials expressed to HEW and the Department of Labor strong opposition against any requirement of numerical goals with timetables for faculty, especially on a single-department basis. The HEW Guidelines of October 1972 seemed to recognize the persuasiveness of that presentation. As already explained, those guidelines state that a school, division, or a college "in many institutions" may be "the appropriate unit for goals." However, when Harvard in 1973 submitted an affirmative action plan, it was rejected by the regional office until Harvard capitulated and submitted a plan with numerical goals for each of its 30-odd departments of the arts and sciences faculty.

By the fall of 1973 a number of developments had increased the concern of universities with government enforcement programs and activities as they affect faculties and the opportunity of various groups for faculty employment. More universities and colleges were being pressed by HEW regional offices to comply strictly with the industrial-model requirements of Revised Order No. 4. The faculty system of professional evaluation for faculty appointments and promotions was being threatened by the proposed "Uniform Guidelines on Employee Selection Procedures."[7] Enforcement of equal-pay legislation was threatening to force some vulnerable universities to bring women's and then white males' pay up to the higher levels being paid to blacks. The inconsistencies between some regional enforcement of the HEW Guidelines and the race and sex blindness of the Civil Rights Act were threatening universities with suits charging discrimination against women and suits charging discrimination in favor of blacks and women. Some white males just acquiring Ph.D. degrees and some white male assistant professors pressing for promotion to tenure were complaining that their employment opportunities were being curtailed by preferences given to women and blacks. The EEOC was bringing an increasing number of court cases against universities for discrimination against women, and some courts were using industry-model concepts in deciding faculty cases.

---

[7] See p. 114.

Given the weak political position of institutions of higher education, the outcome of such developments is difficult to predict. But it has become increasingly clear to university administrators that the only intelligent policy is consistently to follow the principle of equal employment opportunity – to have faculty appointed and promoted who, on the basis of their past performance, are judged by mature teacher-scholars to be the best available in terms of the requirements of the position. Also, that policy is consistent with the most effective pursuit of a university's educational goals.

Experience has demonstrated the need to work out a more intelligent and constructive program of affirmative action between government and universities. Such a program would involve more attention to the contribution that universities and government could cooperatively make to develop a larger supply of well-qualified women and minority persons for academic and other professional positions. Also there is need for some intelligent analysis of affirmative action and antibias enforcement on the demand side in the cases of universities. The next chapter deals with those subjects.

9. A Program for Enforcement of Nondiscrimination

This chapter sets forth a program for government enforcement of nondiscrimination in faculty employment that has been developed by the author. The program deals primarily with Executive order enforcement policy as applied by HEW.

One could argue that a comprehensive scheme of antibias regulation of universities, conducted by an administrative agency under Executive order, is not so necessary now that institutions of higher education are under the fairly comprehensive programs of antidiscrimination, involved in enforcing Title VII of the Civil Rights Act, the Equal Employment Opportunity Act of 1972, and the Equal Pay Act amendments of 1972 as well as state fair employment practices and equal-pay laws.

The program presented here assumes that properly formulated and properly enforced antidiscrimination guidelines under contract compliance could, on balance, provide sufficient positive benefits in terms of nondiscrimination in faculty employment to justify having such government regulation for several more years. In view of all the other antibias regulation of universities, however, the program under Executive order should be designed so that, at the appropriate time, it could be considerably contracted, if not completely terminated, with respect to university faculty.

Any program for Executive order enforcement as applied to faculty should be essentially in accord with the basic legislation for nondiscrimination in employment and pay as applied to faculty. Otherwise, a university's efforts to comply with all government agency directions and demands can only lead to inconsistent appointment and promotion decisions, which can expose the university to simultaneous charges of discrimination in favor of and against the same group, on grounds of race or sex.

The proposed program is designed to improve Executive order enforcement of nondiscrimination in a number of respects: soundness of conceptions, consistency of policies, suitability for the special needs of higher education, avoidance of adverse effects on the educational objectives of institutions, restraint on the regulatory propensity for undue intrusion, and economy and efficiency of administration. In developing affirmative action guidelines, stress on those aims and considerations is important for gaining enlightened acceptance and pursuing intelligent enforcement.

This chapter first takes up the aims and considerations that experience indicates need stressing in a government program to enforce nondiscrimination in faculty employment under federal contract compliance. Next attention is given to the need for the government, as an important part of its compliance activity, to collect faculty data on a nationwide basis, covering projected and actual hirings, the terms of offers made, faculty movement among institutions, and individual charges of discrimination and their disposition. With timely data of that sort, the program could be monitored centrally, on a nationwide basis and for different segments of higher education. Analysis of the data could show the progress that is being made, the troublesome problems that are developing, and the revisions in the program that seem called for by experience.

Then, in the final section, the main elements in the proposed program are presented in fairly concise form. The program is designed primarily as a revision of the HEW Guidelines. It would also involve some changes in the jurisdiction or policies of other federal agencies, particularly in the Department of Labor. In addition, the voluntary program of private mediation-arbitration discussed in Chapter 6 is included as a significant element in the total program.

IMPORTANT CONSIDERATIONS IN DEVELOPING A PROGRAM

Experience is an acute teacher. Use of the HEW Guidelines for more than a year has taught both positive and negative lessons. We have learned which policies are appropriate and have desirable effects and which are ill-conceived and have unfortunate consequences. Much has also been learned about the administration of government antibias programs that seek to enforce nondiscrimination and various kinds of "affirmative action."

1 Guidelines for affirmative action plans should be based on a knowledge of the facts, a well-considered formulation of objectives, clear

definitions and concepts, appropriate analytical methods, and arrangements for intelligent, sensible enforcement.

Higher education guidelines designed to apply to faculty should be geared to the special, rather unique systems for hiring and promotion for teacher-scholars, particularly at major universities. Therefore, guidelines for the antibias regulation of university faculty should be conceptually and administratively distinct from those for industry or for the nonacademic, supporting staffs of universities. Revised Order No. 4 as presently conceived and applied is inappropriate for application to most tenure faculty positions in major institutions. The facts of academic life, including specialization by a subfield of a discipline and considerable differences in abilities and competencies among experienced teacher-scholars in a subfield, make highly questionable any attempt to apply unsophisticated notions of availability, utilization, deficiency, proportionality, and numerical goals with timetables to faculty positions beyond those to be filled by new Ph.D's beginning their teaching-research careers.

2 All parts of the federal effort to achieve nondiscrimination in higher education should be consistent in aim and policy. Federal authorities should be clear and in agreement with respect to proper policies:

(a) To rectify past discrimination in individual and class cases and prevent such discrimination in the future

(b) To correct university policies (for example, employee benefits, leaves for childbearing and child-rearing, part-time tenure appointments, antinepotism rules) that may operate in a discriminatory fashion

(c) To prevent new discrimination in hiring, promotion, or compensation

A set of federal guidelines that results in inflated numerical goals and stimulates pressures for preferential hiring and promotion by race and sex serves to increase the amount of discrimination,[1] which is inconsistent with the provisions of federal legislation and the stated aims of federal agencies. Guidelines for higher education should be clear of purpose and consistent in practice with respect to those matters.

Given the very special features of the faculty system of appointment and promotion, a strong case can be made for a single federal

[1] Preferential hiring and preference in promotion discriminate for some groups and against others, thus adding to the amount of discrimination, as Daniel Seligman (1973) points out.

regulatory agency for antibias enforcement, at least for the faculties of institutions of higher education. It may not be possible to have the necessary consistency of enforcement goals, policy, procedure, and data requirements if enforcement is parceled out to four or more different federal agencies (HEW, the Office of Contract Compliance and the Wage-Hour Division of the Employment Standards Administration in the U.S. Department of Labor, and the Equal Employment Opportunity Commission plus the Civil Rights Commission and the Department of Justice).

3 Under the affirmative action plans of major universities, stress should be placed on, and ample credit given for, developing a larger supply of female and minority-group faculty qualified for tenure appointment at high-ranking institutions. Such accomplishment could constitute the most significant affirmative action contribution that some major universities could make toward equalizing the chances of female and minority-group faculty to achieve high-level appointments. The working out, under government regulation, of incentives and credits for the appropriate recruiting and training of graduate students and assistant professors prior to a tenure appointment would present some practical problems, which are treated below.

4 The importance of intellectual autonomy for universities should be recognized and care should be taken to avoid, as much as possible, any detailed regulation of their internal operations. That includes forgoing efforts to restructure and redistribute authority and actions that would increase the centralization of power and authority in the university at the expense of faculty self-government and professional assessment of faculty qualifications. Care should be taken to avoid, through federal regulation, a weakening or displacement of the faculty system of professional decision making on faculty staffing by insistence on the application to faculty of personnel-management techniques based on an industrial model. Unintelligent, dysfunctional regulation along those lines is likely to hamper universities in the most effective pursuit of their educational and research goals over the long run.

5 In the enforcement of equal opportunity for all faculty, due recognition should be given to the primacy of the basic objectives—the mission—of a major university, namely:

(a) The discovery of important new knowledge
(b) The cultivation, through faculty instruction, of an understanding of

existing knowledge, the ability to use that knowledge, and the competence to develop new knowledge

(c) The training of students in professional schools in the understanding and practice of a systematic body of specialized knowledge

Care should be taken that government regulations and enforcement demands do not adversely affect a university's ability to pursue those basic objectives. It should be recognized that the quality of mind of the faculty member, of his or her faculty colleagues, and of the students (as well as the academic atmosphere and opportunities in the department and the institution) affect the quality of the results achieved through both teaching and research.

Those five points or considerations should be carefully taken into account in framing and enforcing federal guidelines for nondiscrimination and appropriate affirmative action at institutions of higher education. The program presented below has been designed with them firmly in mind.

ROLE OF DATA COLLECTION AND ANALYSIS

Proper reporting by all universities and colleges covered by HEW regulation could provide the basis for the development and operation of a more intelligent, equitable, effective, and economical program of federal antibias regulation of institutions of higher education than the present one. Comparative analyses of the faculty data so collected would help the federal government to monitor the program on a nationwide basis and by separate parts of higher education as well as by individual institution.

For the most part the reports from individual institutions would supply quantitative data, accompanied by explanations for certain figures. More descriptive would be reports on recruitment efforts and complaints. Comparative analyses of both quantitative and qualitative material in reports would enable government analysts to draw general conclusions on the mismatch between demand and supply by discipline and subfield, broken down by race and sex for assistant professor positions and tenure openings. Such analyses could be used to draw conclusions about the extent and nature of discrimination against or in favor of different races and sexes, in different disciplines, in different categories of institutions, and in different regions.

The kinds of data and information that would be most helpful to collect and analyze for program and enforcement purposes (including leads for field investigations) are the following:

1 Each institution would be required to report each July the numerical hiring goals for the nontenure ranks in its affirmative action plan, by race and sex for the succeeding two years.

2 Each institution would report each January its faculty hires and terminations for the previous six months (July to December), and each July its faculty hires and terminations for the preceding six months' period from January through June, giving the salary and rank offered to each new minority person or woman hired and the salary and rank for each nonminority male hired. For the same periods, all faculty terminations would be reported with a brief comment concerning each termination.

3 Each institution would report each year in July the number of faculty in each department (and professional school) by rank, broken down by race and sex, who were employed on May 1.[2]

4 Each institution that grants an average of 10 or more Ph.D.'s a year would report in June each year *(a)* the number of such degrees granted by department, broken down by race and sex, and *(b)* the experience in placing its Ph.D. candidates and recipients in academic positions outside the institution.

5 Each institution should gather and maintain in one office a full record of the recruitment efforts, the selection process, and the offer or offers made for each faculty opening.[3] In that way the material would be well organized and readily available for examination by compliance officials checking on the compliance of that institution with respect to faculty hiring.

6 Each institution should report to HEW[4] whenever a faculty member (or applicant for a faculty position) lodges a complaint of discrimination in employment against the institution with a federal or state agency or a court, giving the essentials of the allegation. HEW would arrange for reporting by other federal agencies of faculty complaints of discrimination in employment filed with them.

[2] Salary is not asked for existing employees as it is for new hires, because comparisons of salary figures, apart from a knowledge of individual qualifications and experience, are not very meaningful or informative, especially where the numbers are too small (particularly for minority persons and women by rank in most departments) to calculate statistically valid averages for comparison by sex and race.

[3] A form for organizing such material could be adopted by the federal government for use by the institutions.

[4] This assumes that HEW would be the central agency for antibias regulation of institutions of higher education.

The institutions would report to HEW periodically with respect to progress in settlement of each case and its final disposition.

7 HEW would add up the projected nontenure hiring goals in affirmative action plans by race and sex and the total nontenure hires by race and sex for the same period, and compare and analyze them by category of institution. HEW would also analyze for faculty the terminations by race and sex and type of institution, and the terms of offers made and accepted by persons coming from a regular faculty position in another institution.

8 HEW would classify and analyze individual complaint data to determine the incidence of such complaints, the experience with their settlement, and the implications of the data and experience for government antibias programs and for enforcement policies and practices.

Such a set of reports and their analysis would have a number of advantages from the point of view of intelligent operation of the program and equity in the functioning of compliance review and analysis. A systematic program for data reporting would put all covered institutions on a par in terms of reporting requirements, timing of a review of their data, and analysis of their relative standing and rate of progress.

The preparation and findings of periodic reports can stimulate thought and discussion concerning the institution's efforts and relative position, by the administration, faculty, and others in the university community. No university or college will have reason to lack concern because of apparent neglect by HEW. Without such a reporting system, it will be years before HEW makes any significant contact with all of some 900 universities and colleges, or even half of them, that it covers.

Such systematic reporting would facilitate intelligent and objective selecting and scheduling of institutions for field investigation. Comparative analysis of submitted data, and not such factors as nearness to the regional office or militancy of particular advocacy groups, would provide the basis for determining the timing and frequency of HEW field investigations at particular institutions. The collection and analysis of such comparable data should also serve to reduce the time spent by HEW staff in field investigation.

Such a system of periodic data reports might seem to place a heavy burden on colleges and universities. If the other federal agencies could work out with HEW a standard form for such data that would meet the needs of all of them, and perhaps the state agencies as well, that would reduce the time university personnel spend on separate, uncoordinated reports in connection with antibias regulation. Also, lessening the time spent by university administrators and faculty with field investigations would mean added saving for the institutions. On net balance, such a data reporting system could prove economical for most institutions.

The chief benefit provided by such data and analyses of them would be a better factual basis for guiding administration of the program, for drawing conclusions about the impact of the program, and for making appropriate revisions and improvements in the program and its enforcement.

ESSENTIALS OF AN APPROPRIATE, EFFECTIVE PROGRAM

This section presents the substance of a positive program for both the development of larger numbers of highly qualified female and minority-group faculty and the enforcement of equal opportunity in faculty employment, with major universities especially in mind. In developing this program, attention has been given to the five considerations discussed earlier in this chapter, and the program assumes that a data-reporting system such as the one just outlined is in operation.

First, the main components or features of the program are presented in outline form. They are six in number. The reasoning or basis of support for those components has, for the most part, been given in the preceding chapters. For some elements or aspects further elaboration may, however, be needed. Such elaboration is presented sequentially after the outline statement of the six components, which follows.

An affirmative action program for increasing the supply of highly qualified female and minority-group teacher-scholars in certain academic disciplines and fields of professional practice where the supply of teacher-researchers is exceedingly thin. The mechanism for developing much larger numbers of supply qualified for high-level faculty appointments in selected fields is competitive submission of "affirmative action supply programs" by universities for HEW selection and approval. The plans would provide for unrestricted selection by the university of those female and minority-group applicants to participate in that university's program for supply development. (This proposal is explained in some detail in an appendix to this chapter.)

2 Use of availability-utilization analysis and numerical goals to achieve "proportionality" to be confined to first regular appointments of new and prospective Ph.D. holders to the position of assistant professor or advanced instructor on the ladder of professional advancement. Thus, "affirmative action demand plans" would be focused on those who are at the same stage of career development, namely, recent completion or practical completion of Ph.D. requirements.

3 For enforcement of nondiscrimination for faculty appointments other than first appointment as assistant professor and for promotions within the professorial ranks, use of *(a)* analysis of data in the periodic reports of institutions, *(b)* field examination of the institution's central file of information on each faculty appointment and promotion, *(c)* the procedures for settling individual faculty complaints of discrimination, including the system of mediation-arbitration presented in Chapter 6, *(d)* the Equal Employment Opportunity Commission and state agencies for antidiscrimination enforcement, and *(e)* the courts.

4 Concentration in a single agency (HEW) of the administrative oversight of affirmative action plans and compliance, as applied to faculty (including professional research staffs) in higher education. That would mean removing faculty of colleges and universities from the Department of Labor's jurisdiction for contract compliance and, thus, from the provisions of Revised Order No. 4. Supporting staffs generally would, on the other hand, remain under Revised Order No. 4 as long as it applies to similar operations and occupations in industry.

5 HEW regulation for the faculty of major universities and other institutions that recruit a majority of their faculty in the national market to be handled by one well-qualified unit instead of ten regional offices. That would mean central handling of such faculty with respect to affirmative action supply plans and affirmative action demand plans, data analysis, and compliance enforcement.

6 A restructuring and strengthening of the staff of the Higher Education Division of the Office for Civil Rights in HEW, so that it is suited to meet the added responsibilities and functions to be placed upon it, especially the central unit to handle major universities and other institutions recruiting nationally, and to analyze the data reports.

Much of the factual background and the analytical bases for the six main components of the proposed program have been discussed in Chapters 2 through 8. Nevertheless, it may be helpful to comment briefly on each of the six and their interrelationships.

1 Failure to take account of the supply aspects in developing affirmative action plans and the need to increase the supply of women and minority persons qualified for appointments as tenured faculty were pointed out in Chapters 3 and 5. Experience in this country and abroad, particularly Russia, clearly indicates the need for vigorous, well-supported efforts to develop a critical mass of women and blacks qualified for tenure appointments in the natural sciences and engineering. Such faculty supply is needed to teach graduate courses and do research in disciplines that have a bearing on problems such as energy, pollution, and transportation, so that female and minority-group researchers would be attracted into and trained for work in those areas. Without special efforts on the supply side, experience and data show that the development of a proper supply will be a slow and lengthy process.

A specific proposal for increasing significantly the supply of female and black faculty well qualified for tenure appointments in fields where their supply is quite thin is spelled out in some detail in the appendix to this chapter. The proposal involves universities submitting affirmative action supply (AAS) plans, from which HEW would select the needed numbers for approval. The AAS plans would be for graduate training for the Ph.D. degree and postdoctoral training as teacher-scholars while on assistant professor appointments. It is suggested that the fields for such a breakthrough action on the supply side might include, in the arts and sciences, the disciplines of chemistry, economics, geology, mathematics, physics, and statistics, and among the professional schools: architecture and urban planning, business administration, engineering, and public administration.

As is explained in the appendix, an approved affirmative action supply plan would be taken into account favorably in considering a university's whole program for equal employment opportunity for faculty. It would be necessary to protect the process of selection by a university of graduate students and assistant professors for participation under an AAS plan from vulnerability to charges of discrimination against white males on account of their exclusion from a plan's purview. The university would still be subject to nondiscrimination requirements—under legislation and contract compliance—for all faculty employment not included in approved AAS plans. The AAS plans would not involve government control over faculty selection of female and minority-group graduate students and junior faculty to participate in such plans nor would they give cause for any regulation that would tend to alter or weaken faculty self-government and the faculty's role in selection and promotion of faculty.

2 The grounds for the proposal to confine availability-utilization analysis and numerical goals based on that type of analysis to the first regular appointment as assistant professor (or advanced instructor) were fully explained in Chapter 4. Chapters 3 and 4 also explained why supply and demand conditions for tenure positions at major universities were generally inappropriate for such availability-utilization analysis and for numerical goals based on such analysis.

3 The third component deals with the detection and determination of noncompliance and discrimination in faculty employment, especially for areas where the method of utilization analysis and numerical goals is inappropriate and leads to erroneous conclusions. It suggests reliance, in part, on the kinds of data analysis discussed earlier in this chapter. The results of such analysis should assist in the selection of institutions and areas for questioning and further examination, including field investigation if necessary.

Individual complaints can be an effective method of enforcement, especially if nondiscrimination or the elimination of demand discrimination, and not calculated numerical goals, is the compliance objective.

The purpose in establishing a faculty complaint procedure and in proposing the system of mediation-arbitration by experienced outside faculty in Chapter 6 was to facilitate prompt submission of faculty complaints of discrimination and to have them settled intelligently and correctly—by private settlement within the faculty system if possible. In addition, complaint can be made directly to federal and state antidiscrimination agencies and the courts.

HEW personnel are prone to overstress numerical goals and to underestimate the enforcement power of individual complaints, especially by faculty who enjoy certain customary and legal protections growing out of faculty status. That may be because HEW itself had so much difficulty and was relatively ineffective in handling individual complaints of discrimination and "reverse discrimination" that were filed prior to mid-1972, when individual complaints of discrimination against institutions of higher education were transferred to the Equal Employment Opportunity Commission.

4 The advantages to both the government and the institutions of having a single agency collect the data and administer the various aspects of affirmative action and antidiscrimination for faculty (except for individual complaints filed with federal and state agencies under the Civil Rights Act and state antidiscrimination legislation and legal actions handled by the Justice Department) should be obvious. Federal antibias regulation for faculty could be administered much more consistently, intelligently, and economically. Responsibility for planning, administering programs, and conducting enforcement activities would be in the hands of one agency, which should consequently have knowledgeable and qualified staff. The institutions of higher education would have one agency to deal with and one set of comprehensive reports to make, thus reducing confusion, frustration, and cost. A set of relationships could be developed between that agency and the institutions of higher education that would be constructive and effective in promoting mutual interests and goals.

5 The grounds for proposing that a single administrative unit within HEW handle faculty of major universities were explained in the last section of Chapter 7. With central collection and analysis of data and with enforcement activities partly based on such analysis, a good case can be made for single administrative handling of the faculty of universities and colleges that recruit the bulk of their faculty in a national market. Admittedly there could be practical difficulties in drawing a line between institutions on that basis. Nevertheless a strong argument can be made for national handling of at least faculty recruitment, initial appointment, and interinstitutional movement in connection with new appointments, in the case of those institutions that compete largely in the national market for faculty.

6 Chapter 7 explained the need for increasing the qualifications of the staff of the Higher Education Division of HEW, especially with respect to knowledge of and experience in the faculty systems of recruitment, appointment, and promotion, particularly in major universities. Assuming the adoption of all or most of the previous five components, the need for bringing to the staff more knowledgeable and analytically qualified personnel is all the greater. In dealing with programs and regulations to apply to faculty, mutual understanding and respect contribute to constructive solutions.

These six components of a program are presented here, not as a completely finished product but as basic elements for discussion and a foundation for the development of a federal program for assuring equal employment opportunity and nondiscrimination in faculties of institutions of higher learning, while at the same time not decreasing, but hopefully increasing, the effectiveness of their instructional and research programs.

Obviously, the legal and practical aspects of such a program would need to be given much more detailed consideration.[5] With respect to constitutional questions, it should be pointed out that the proposal for affirmative action supply plans differs significantly from the present program of affirmative action plans on the demand side under the HEW Guidelines. The latter program is applied uniformly to all institutions of higher education with federal contracts. Therefore, it encompasses the bulk of the market for university faculty.

The program of affirmative action supply plans, on the other hand, would apply only to selected fields in selected institutions, and then only to a part of the graduate students or junior faculty in those fields at those institutions. In the case of graduate-student AAS plans, it could well be that the numbers would simply be added to the institution's regular complement of graduate students so that no displacement would be involved. Even if there were some displacement at that institution, the opportunity for male white graduate students to obtain excellent graduate instruction would be restricted to only a small extent in view of the large numbers of universities that would be offering graduate instruction without an approved AAS plan in those fields.

The impact of AAS plans for nontenure faculty positions might be more significant because the possibility of expansion in number of faculty at a particular institution is likely to be less than for graduate students. That difference could be reduced by an expansion of government contracts that would increase research opportunities in the discipline at that institution. In any case, the restricted areas of faculty employment under AAS plans would be in specified fields and for only a part of the nontenured faculty employment — usually much less than half — in the field or fields at that institution. Again, in view of the large number of universities without AAS plans, the overall restriction on opportunities for nontenured faculty employment for white males would be small. That is especially the case in view of the fact those fields were selected because they have few female and minority-group faculty throughout the nation.

---

[5] It is possible, for example, that the following provision of Title IX of the Higher Education Amendments of 1972 would need to be amended if federal fellowships were to be provided for graduate students under AAS plans: "No person in the United States shall, on the basis of sex, be excluded from participation in, be denied the benefits of, or be subjected to discrimination under any education program or activity receiving Federal financial assistance."

The proposed AAS plans further illustrate how government antidiscrimination plans can, by intelligent planning and working with universities on specific problems, avoid detailed intervention in the internal operations of universities.

The next chapter discusses the role that academic leadership might play in moving forward the kind of program presented in this chapter.

APPENDIX TO CHAPTER 9: Proposal for Affirmative Action on the Supply Side

This is an elaboration of the first component of the proposed program discussed in the last section of Chapter 9, pages 146–147.

Purpose This proposal is designed to increase significantly the supply of female and minority-group faculty who are qualified for university positions carrying tenure in fields where they have heretofore been quite rare. The aim would be to develop enough women and minority persons as outstanding teacher-scholars to provide a critical mass, and thus to eliminate a sense of peculiarity, separateness, and other restraints on the development and use of their talents for such a career. By providing a critical mass, the proposal would hope to reduce subtle barriers and to provide the momentum for further increases after the government's affirmative supply effort in that field is discontinued.

Fields for supply development Criteria for the selection of fields for such supply development would include: (1) the scarcity of female and/or minority-group senior faculty in the field and (2) the relative need for talented female and minority-group teacher-scholars in the field to help train female and minority-group practitioners and teacher-scholars for the future. Among the fields that should be considered in the arts and sciences are chemistry, economics, geology, mathematics, physics, and statistics; and among the professional schools: architecture and urban planning, business administration, engineering, and public administration.

Kinds of training and development For increasing the supply of well-qualified female and minority-group faculty in a selected field, government encouragement and support would be needed for the two stages of advanced training and development: (1) graduate training for the Ph.D. or its equivalent and (2) postdoctoral development as a teacher-scholar during the first five to seven years as a regular faculty member, when one needs the opportunities to make a reputation as a teacher-researcher that would qualify him or her for a tenure post at a respected institution of higher education.

The duration of graduate training for the Ph.D. might be considered four years. The development period as assistant professor is usually five to seven years. Together they amount to about ten years but, of course, each stage could be handled separately. What these time intervals do indicate is the rather long training period to achieve prominence as a teacher-scholar.

Encouragement of affirmative action supply plans The federal government, after selecting the fields for such special supply-increase efforts and deciding for each field the increase in numbers it wishes at each stage each year, would establish the terms of encouragement and support that such plans would have. To help attract female and minority-group Ph.D. candidates into those fields and to demonstrate the federal government's interest in doing so, probably some federal support for fellowships would be needed in addition to university and possibly foundation fellowship funds. That would also provide some incentive for universities to submit affirmative action supply plans for Ph.D. training.

For teacher-scholar development of assistant professors, probably no federal financial support would be necessary. The individuals selected would be paid regular salaries for regular faculty service. Universities would presumably be interested in submitting AAS plans for such reasons as the following: (1) the institution's faculty and administration have a genuine desire to expand the number of highly qualified female and minority-group faculty in the field, (2) credit would be given to such an effort in terms of contract compliance, and (3) the numbers of female and/or minority-group assistant professors in an AAS plan would displace the numerical goals for such assistant professors in the institution's affirmative action demand plan, and such goals would be difficult to work out for those fields in any case. Furthermore, it would be necessary to recognize that female and/or minority-group assistant professors recruited under plans for supply increase would not be likely to have the same opportunities for promotion to tenure at their institution as assistant professors appointed on the basis of open competition, with the prospects for a tenure opening more definitely in mind. Those differences should, however, in no way preclude promotion of assistant professors appointed under a supply-increase plan, if that is warranted in open competition, or perhaps inviting them back at a later date. Those possibilities could be among the potential benefits of the plan for the institution.

Content of AAS plans The federal government would specify the material that should be submitted by institutions in the competition to obtain government approval for an AAS plan for Ph.D. training, for the development of able and effective teacher-scholars, or both. An institution's graduate-student AAS plan would specify by year the number of female and minority-group graduate students to be in Ph.D. training under the plan. An institution's faculty-development AAS plan would specify the number of female and/or minority-group assistant professors (and advanced instructors where that is the initial appointment) to be on the faculty each year.

In a graduate student plan, the institution would describe its Ph.D. degree requirements and the nature and content of its graduate training in the field, including the quality of the faculty, the research training facilities and opportunities for graduate students, the quality and numbers of graduate students, the average length of time to complete Ph.D. requirements, the record of the institution's Ph.D. recipients later as teacher-scholars, and similar data.

In the faculty-development plan, the institution would need to set forth the opportunities for its assistant professors to achieve outstanding records in teaching and research. The pertinent material would include: teaching opportunities in undergraduate and graduate courses, teaching loads, quality of students, paid and unpaid leaves of absence for research, research opportunities and support, library and computer facilities, quality of tenured and nontenured faculty, opportunities for discussion with tenured faculty concerning professional matters, and other aspects of teaching and research at the institution. Assurance would need to be given that assistant professors under the AAS plan would have the same rights, privileges, and opportunities as other assistant professors.

Under an accepted AAS plan the university would be free to recruit and select female and minority-group graduate students and junior faculty according to the institution's (faculty and deans) judgment of the persons best qualified for its graduate training or assistant professor teaching and research, from among the candidates it is able to recruit. In other words, the institutions would retain freedom of selection of graduate students and junior faculty, and the students and Ph.D. holders seeking assistant professorships would have freedom of choice of university.

Selection and oversight of AAS plans The federal government, in deciding which among the AAS plans submitted it will accept, would base the decision mainly on the quality of the instruction in that field at that institution in the case of graduate-training AAS plans and on the opportunities for developing into outstanding teacher-scholars there in the case of faculty AAS plans.

Government oversight of the accepted plans would be confined to ascertaining whether the institution was performing according to the provisions of its plan as officially accepted. Judgment on that score could be based largely on written reports. Failure to comply with its accepted plan, if not corrected, could lead to withdrawal of acceptance, along with the attendant government support and privileges.

10. Academic Leadership and Constructive Action

The preceding chapters have presented an analysis of the federal government's program of antibias regulation as it is being applied to the faculties of universities. They have shown that the federal program has been flawed by some misconceptions, inappropriate methods of analysis, and erroneous conclusions based on faulty analysis. The main defects in the program can be summarized as follows:

1 Failure to recognize and take into account the fact that demand for tenured faculty is highly individualistic and selective, based on personal achievement of the highest quality as a teacher-scholar and stimulated by competition for excellence of faculty (Chapter 2)

2 Failure to make a proper analysis of supply differences by sex and race for academic disciplines and subfields, and to take special account, in affirmative action plans, of human-capital development on the job during the five to seven years after receipt of the Ph.D. degree (Chapter 3)

3 Flaws in the conception and measurement of discrimination under availability-utilization analysis that result in placing undue blame and remedial responsibility on the demand side and lead to inflated numerical hiring goals (Chapters 4 and 5)

4 Pressures for discriminatory hiring to meet inflated goals, resulting in additional, new discrimination and the likelihood of an increasing number of "mistakes" in the selection of tenured faculty (Chapters 2, 3, and 5)

5 Government application of the industry model of authority and personnel management to university faculty operations, with the consequent threat to the faculty system of collegial decision making based on professional assessment of merit (Chapters 7 and 8)

6 Increasingly involved and intrusive regulation of faculty decision making, with the negotiation and enforcement of each successive affirmative action plan (Chapters 7 and 8)

7 Inconsistent government policies and regulatory treatment between government agencies and different HEW field offices, opening up added legal liabilities for universities and affecting arbitrarily and unevenly their ability to compete for faculty, students, and resources, nationwide and internationally (Chapters 4 and 6)

Those seven defects characterize the federal regulatory system as applied to universities and colleges generally. They are defects from the viewpoint of most of the 900-odd universities and colleges covered by the HEW system of antibias regulation. HEW's mistaken assumptions and policies are likely to be about as inappropriate for nonmajor institutions of higher education as they are for major universities.

Indeed, the particular interests of the nonmajors are likely to receive even less consideration by the HEW regional offices because they are not in as strong a position to resist singly the regulatory program of HEW. Patterns of affirmative action plans are being set by HEW regional-office negotiations with the major universities. Those patterns are not likely to take adequate account of the needs and special interests of different types of nonmajor institutions.

Generally speaking, a less prestigious institution will find it difficult to effectively resist pattern spreading negotiated by the one-institution-at-a-time enforcement tactic. Under that tactic, the other categories of institutions are not in a good position to press for needed and appropriate reform of the HEW regulatory system from their viewpoint.

RESPONSIBILITIES OF THE ACADEMIC COMMUNITY

If the programs of government regulation of universities and colleges for antidiscrimination purposes are to be intelligently formulated and properly applied, the faculties and administrations of universities need to consider the difficulties and implications of the present programs. For a variety of reasons, a surprising amount of ignorance exists among university faculty concerning the actual demands that HEW regional offices are making and the far-reaching implications that they and court cases can have for the future of higher education in this country.

Analysis of difficulties and defects of existing antibias enforcement can point the way to more appropriate solutions. Painful experience with adversary contests in agency hearings and the courts encouraged the development of the limited mediation-arbitration proposal for individual complaints of discrimination by faculty members in Chapter 6. It is a procedure for constructive settlement within the university community.

The fairly comprehensive program for government enforcement of equal opportunity for faculty proposed in the preceding chapter is designed especially to meet serious objections to and defects in the existing government programs of antibias enforcement in higher education.

Clearly in a matter as subtle and complicated as discrimination in employment in university faculty, one program cannot be expected to satisfy all the needs and concerns of the various interested parties. Although feelings of sex, race, or religious prejudice cannot be fully eliminated from university faculties, strenuous efforts must be made to assure equal opportunity to all to excel, and to avoid any adverse effects of such bias on the professional careers of individuals.

Some may consider the program set forth in Chapter 9 to be too attentive to the concerns and objectives of the leading universities – "the elite" of higher education. The analysis of government antibias regulation in this book has dealt with problems particularly of those institutions for three reasons: (1) HEW's mistaken assumptions concerning qualified supply and numerical hiring goals are very clear, and the potential for lasting injury to the nation's preeminent instructional and research resources is so evident, in the case of the leading institutions, (2) the world of higher education looks to the major universities for much of the leadership, especially in faculty matters, and (3) HEW appears to have chosen many of the prominent universities to achieve breakthroughs and pattern setting in government regulation of university faculty.[1]

The faculties and administrations of universities and colleges in other classifications could suggest additions or complementary features to the Chapter 9 program, needed to fit their circumstances. It is important that faculty members and administrators in various types of institutions consider the kind of government regulation that suits both the goal of equal employment opportunity and their particular needs.

---

[1] In the letter stating the HEW found MIT's affirmative action plan "acceptable and in substantial compliance," the regional civil rights director noted that in some respects MIT had gone beyond minimum standards of compliance and was the first institution of higher education in Region I to work out with HEW numerical goals by academic department. With respect to such pattern setting, the director said: "We'll be able to help a lot of universities as a result of what you've done." (*Tech Talk*. 1973*b*, p. 1). Help has taken the form of HEW insistence that Harvard and other major institutions in Region I must have numerical goals by individual department in the arts and sciences.

Some in academia may argue that parts or all of HEW's program of affirmative action should be abandoned either as impractical or inappropriate and uncorrectable. For reasons presented at various points in these pages, abandonment of the affirmative action part of federal contract compliance at this stage of development would seem to be premature.

The case for excluding university and college faculty from coverage under the Equal Pay Act is more persuasive. That legislation uses "job content" as the basis for determining sex equity in the wage and salary structure at a particular location. That concept simply does not fit long-established promotion and salary-setting practices for university and college faculty. To bend universities' systems of salary and salary-increase determination to fit concepts of the Equal Pay Law could practically destroy their effectiveness.

University administrators may find it awkward and retrogressive—even elitist—to have different government regulatory programs and agencies for faculty and for supporting staff. It can be argued that the appointment of a new financial vice-president, a librarian, a director of admissions, or a personnel director for a university can involve individual supply aspects and search and selection processes not very different from those that apply in the selection of a professor of classical Greek philosophy, high-energy physics, or microeconomic theory. Distinguished professors in particular subfields may be more rare, but search for the best-qualified person for a top nonfaculty post in a particular university setting may demonstrate that the notion of a qualified pool does not fit that situation very well either.

Clearly, however, the answer is not that individual faculty should be treated differently because they are personally so different or somehow better than individual members of supporting staffs. It is that the system of teacher-scholar training, faculty operation, and selection for tenure posts is basically different, and that the differences are too important for effective operation of universities to have them obliterated by a common program of government regulation that is applied in a strictly conformist fashion. Undoubtedly in many universities, professionals on the supporting staff, such as professional researchers with Ph.D. degrees and perhaps professional librarians, should be included under a regulatory program for faculty.

The specifics of antibias regulation of universities and colleges should be carefully analyzed and thoroughly discussed, both on the campus and in Washington. Reform should be based on facts and experience, and on long-range planning as well as short-run concerns.

The faculties and administrations of universities have an obligation to provide intelligent leadership with respect to antibias regulation of higher education in this country. They have a large stake in the faculty system of professional evaluation of qualifications and responsibility for academic affairs. Universities have gained much of their strength and effectiveness from that faculty system, and should be prepared to take affirmative action to preserve and advance its values.

THE FACULTY SYSTEM UNDER PRESSURE

During the next five years, the faculty system of appointment and advancement according to professional judgment of individual merit will be under considerable pressure.

In the five academic years of 1969-70 through 1973-74 many blacks and women were appointed as assistant professors in university faculties. In a number of cases, they enjoyed some advantage or preference in connection with their initial appointment. Some risks were taken. During the next five years, most of those assistant professors will become subject to a decision on either promotion to tenure or termination of appointment.

HEW-enforced hiring and promotion goals have generated a new set of pressures. They, of course, are designed to increase the number of female and minority-group appointments in each department according to timetables under many affirmative action plans. However, any preferential treatment in promotion or appointment to tenure on grounds of race or sex would be likely to violate Title VII of the Civil Rights Act and could expose the university involved to heavy costs, including the possibility of duplicate tenure appointments for a single opening under a court decision.

The demand-supply situation is another complicating factor. The leveling off of demand for faculty – overall stability in faculty positions and openings since 1970 – has created in most disciplines a condition of general oversupply of persons with Ph.D. degrees desiring academic appointment. The quality of available supply is generally better than it was five or ten years ago. Thus, supply crowding exists and will continue to exist with respect to tenure appointments.

Over the years, various criticisms have been made of the system of faculty assessment of qualifications for appointment and promotion. Most of the criticism has been generated by cases that involved a negative decision on an assistant professor's promotion to tenure. As explained in Chapter 2, even in periods of faculty expansion and a more balanced demand-supply situation, only a fraction of all assistant professors were promoted to tenure at many major universities.

Campus criticisms and lessons learned from past mistakes have often resulted in improvements in the process of information gathering, in the quality and objectivity of evaluations, or in faculty procedures to assure due process. Also, a university's system of faculty selection is being tested constantly as offers are made to faculty at other institutions, as faculty move between universities, and as the results of decisions on promotion to tenure are reviewed. The long tenure period that individual faculty have makes it difficult for department members to overlook the lessons of past misjudgments.

Persons in academic life have exceptional opportunities to make individual reputations as teacher-scholars. Their qualities as a teacher become known through their students, departmental colleagues, oral presentations at professional meetings and seminars at other universities, and the textbooks they write. Their research contributions are made available for professional evaluation through articles in scholarly and scientific journals and through published books. In short, university faculty have the advantages of a large number of potential employers, many outlets for the presentation of their scholarly contributions, and a variety of sources for judgments of their work; they can literally teach and write their way to the top in open competition.

Although those opportunities for career advancement provide individuals considerable protection against the impediments of prejudice, they are less effective in a slack market for those who are not in the very top level of accomplishment and for those who are tied to a particular location. A married woman may, for example, need to pursue her academic career within a particular local institution.

University faculty and administrators should be in a position to defend the fairness of the faculty selection and promotion system at their institutions. Therefore, such systems should be examined in terms of the following questions:

- How well are the system's rationale and its actual operation understood by both nontenured and tenured faculty?[2]
- Are the procedures well designed to bring up for consideration those teacher-scholars from whom the best possible candidate for the position can be selected?
- Are the criteria and methods of assessing the merits of several alternative candidates well designed to lead to appointment of the one best qualified for the post?
- Is the information on the leading candidates to be used as the basis for department action as thorough and accurate as possible?
- Does the procedure provide for evaluation of the leading candidates' qualifications for the position by professionals well suited for that purpose, including outside distinguished scholars where external assessment would contribute to the making of an intelligent decision?
- Does the procedure provide for adequate consideration of the documentary information and evaluations prior to department action, with opportunity for individual members of the department to submit separate statements to the administration expressing their views?
- Does the procedure provide that a department recommendation for tenure appointment by promotion or appointment from outside (as well as a negative decision on promotion to tenure that requires termination) is subject to broader review by a committee composed of (say) members elected from the university or college faculty, selected faculty members and academic administrators, or a combination of distinguished scholars from outside and within the university?

---

[2] For material explaining the aims and operation of particular systems of faculty selection and promotion, see *A Report of the University of Chicago . . .* (1972) and *An Information Statement for the Guidance of New Faculty at Princeton University* (1972). For a discussion of criteria, materials, procedures, and practices for tenure appointments at Harvard, see *Discussion Memorandum on Academic Tenure at Harvard* (1971), especially pp. 21–27, and Appendix B, "Preparation of Materials for Ad Hoc Committees on Permanent Appointments in the Faculty of Arts and Sciences," pp. 36–40.

The aim in filling a tenure post presumably is to appoint the candidate who, in that post, would make the greatest contribution to the educational objectives of that university. An assistant professor on the ground whose performance in teaching, scholarship, and general advancement of the intellectual life on the campus have been outstanding would tend to have an inside track on a tenure opening if one developed that just suited his or her abilities, training, and academic interests. A major university should generally apply the same standards for tenure appointments whether candidates are from within or outside. However, distinguished performance in that university's setting should provide a fairly firm basis for predicting the quality of the individual's future achievement. For that reason, mature teacher-scholars in the discipline would be inclined to favor a candidate with proven local experience.

There is a need to make certain that each assistant professor understands the application of the system to his or her case and does not develop unrealistic expectations concerning prospects for promotion to tenure at that university. One way to accomplish those purposes is to have the department chairman, at least once a year, discuss with each assistant professor in the department individually his or her performance as a teacher, researcher, and colleague, and the assistant professor's prospects for a tenure appointment at that university. The chairman's statements should be based on a discussion with the tenured professors concerning each assistant professor and the likelihood of the development of a tenure opening in the right subfield during the limited period one can hold an assistant professorship. Such a department discussion can appropriately be held in connection with the annual salary review in institutions where department faculty of higher rank make department recommendations on individual salary increases on the basis of merit.

The vital importance of distinguished appointments to the tenured faculty of a major university is well stated by the Committee on the Criteria of Academic Appointment of the University of Chicago as follows:

> The function of appointive bodies is to bring to the academic staff of the University individuals who will perform at the highest level the functions of research, teaching, and training and the maintenance of the intellectual community of the Universtiy. A university which does not perform at this level will lose its standing in the world and therewith its power to attract outstanding faculty members and outstanding students. Its failure to at-

tract them will in turn reduce the quality of its performance. Every appointment of a mediocre candidate makes it more difficult to appoint a distinguished candidate later and makes it more difficult to bring outstanding students to the University. This is why scrupulous insistence on the most demanding criteria in the act of appointment is so decisive for the University (*A Report of the University of Chicago . . .*, 1972).

CONCERN AND OPPORTUNITY

The continuing drive of talented women and members of minorities to excel in the arts and sciences and in professional careers presents the universities and the nation with a magnificent opportunity. That momentum, flowering under equal opportunity, can over time greatly enrich professional talent in this country and especially in university faculties in various disciplines.

It would be unfortunate, indeed, if inept regulation, promoting discrimination under a dual standard, should discredit the program. The university community has a responsibility to save the HEW antibias program from that fate.

The faculties and administrations of universities must work for the adoption of suitable and constructive programs, by the institutions and the government, to assure equal employment opportunity for members of minorities and women in the faculties of universities. Basic facts and considerations that need to be taken into account in designing antiprejudice programs of faculty appointment and advancement have been set forth above. Hopefully, the analysis and proposals offered in these pages will stimulate appropriate "affirmative action" on the part of leadership elements in academia and in government.

[From the Wall Street Journal, July 27, 1972]

Do Colleges Practice Reverse Bias?

(By John H. Bunzel)

A person under serious consideration for a faculty position at a state university received the following letter this spring:

Dear ——— ———

I am sorry to report that although the Department of ——— saw you as our top candidate we will not be able to make you an offer for our new position.

Our university is an Affirmative Action Employer and the Department must attempt to fill the new position with an individual from a recognized oppressed minority group. Although the Department initially viewed your ——— ancestry as satisfying the requirements of Affirmative Action, consultation with our institutional advisors on the Affirmative Action Program indicated to us that your ancestry does not qualify you as an opressed minority.

I wish you the best of luck in your future, and I am deeply sorry we were not able to extend an offer to you.

Apart from the heavy-handedness demonstrated in the handling of this particular case, the more serious matter of reverse bias and discrimination is not so easily dismissed. Another candidate, also very much in contention for a faculty appointment, was told in writing that "only ethnic minorities or women are to be considered for all job openings." The question he posed in a letter was simply stated: "What are qualified Caucasian males supposed to do?"

NO EASY ANSWER

The fact is there is no easy or ready answer. But this much is clear: (1) federal regulations require colleges and universities to develop Affirmative Action programs establishing specific recruitment goals and timetables to assure an immediate increase in the percentage of minority and women faculty members and staff employes, and (2) the Department of Health, Education and Welfare is responsible for accepting or rejecting programs proposed by individual campuses. The critical question is how these Affirmative Action programs are to be implemented.

Like most of my academic colleagues I strongly support federal objectives of recruiting more women and minorities as faculty members on an equal opportunity and nondiscriminatory basis. Women in particular have not been accorded fair and equal treatment by the academic world and it is time we admitted it. But I am opposed to the use of any form of quota system that would move to the concept of race or sex as an exclusive or predominant criterion for faculty hiring.

The distinction is important because the debate over Affirmative Action is increasingly being cast in a familiar idiom: if you are not actively with us, you are actively against us. When applied to the academic world, the moral absolution of this simplistic characterization denies legitimacy to complicated and inevitably vexing questions.

J. Stanley Pottinger, the conscientious and personable director of HEW's Office of Civil Rights, recently told the National Association of College and University Attorneys that he "never understood academic freedom to deny a qualified person an opportunity for appointment or advancement because of race or sex, or the right to pay one person less than a person of another race or sex performing the same job." He is absolutely right, just as he is right in pointing out that the "real objective of the law against discrimination is to ensure equal opportunity to all persons regardless of their race, sex, religion, color or national origin." There can be no quarrel with Mr. Pottinger on these points, or with his conviction that university administrators and faculties must examine "their own practices and profiles to determine whether discrimination exists and how it may best be remedied." It is also reassuring to learn from him that an individual's professional qualifications are still "the primary standard for hiring and are at the heart of the Executive Order that HEW enforces."

But are they? Or are colleges and universities being encouraged to introduce into the appointment process non-academic criteria such as race and sex? This is the kind of question (among many others) that needs to be talked about if we are to examine the real or potential effects of Affirmative Action. We need to move from the abstract level of generalities and rhetoric to specific and concrete concerns—in short, to questions of implementation that occur on a day-to-day, department-by-department basis.

The intent and meaning of Affirmative Action are considerably clouded., The issue is not simply "doing the right thing," but one of the other competing and legitimate values and their relationship to many practical problems. The truth is that Affirmative Action involves a collision of rights and principles. The important question is how one balances one's obligations amidst a conflict of assertions and assumptions. Some examples:

> As a society we need to remove the many injustices (educational, economic, cultural, political and social) to the disadvantaged and minorities. It is an urgent priority.
>
> But: Colleges and universities must not adopt unjust or undemocratic means to achieve laudable goals. It is one thing to enable those who have been unfairly disadvantaged to compete fairly and fully—and this we must do. It is something else again to do away with competition altogether or to provide the real or alleged victims of discrimination with redress by discriminating against others. If we set aside a white candidate who is more qualified than a black or brown competitor BECAUSE he is white, we will be discriminating according to race. Once that process gets legitimated, there is no stopping it.
>
> Blacks, Mexican-Americans, and other groups are not heavily represented on college faculties. Some say that our colleges and universities should therefore move at once to bring about a statistically acceptable representation of women and minorities on their faculties. Others even go so far as to say there should be proportional representation of races and sexes in conformance with the percentage of those groups in the general population or the surrounding geographical community.
>
> But: A university should not make faculty appointments the way the Democratic Party chooses convention delegates. The proper goal for a college or university is to hire the best qualified person, and the predominant criterion should be accomplishment and capacity in teaching and research. You cannot determine excellence by race or creed any more than you can recruit a quality faculty by assembling a quota sampling or proportional representation of different groups in the population. The measure of ability for membership on the faculty should be the ability to pursue the truth and transmit knowledge. If certain groups—as Lionel Trilling has said, "for reasons obviously beyond their control"—have not yet produced a large number of persons trained for all of the academic professions then we should address ourselves to that problem and seek ways to remedy it.

COMPLIANCE VS. COMPROMISE

—Civil rights officials have a right to determine if contractors with the government, including universities, are in compliance with federal employment opportunity regulations.

But: We must not compromise the right of the university to make its own academic decisions regarding hiring, rank, tenure and promotion based on professional judgments about intellectual capacity, scholarship, and teaching ability. Each institution in a pluralistic society has its special characteristics, and those of a university should be recognized—and defended—by the government. A university is not an industrial plant. It is neither better nor worse, but it is different. The point is that all institutions in a democratic society should not be reduced to the kind of monolithic sameness that virtually insists they meet the same common requirements.

A basic error of HEW's Affirmative Action is in applying remedies perhaps suitable for conditions in the auto or construction industry, when in reality the situation in the academic world is significantly different. It may well be that a large pool of qualifiied or easily qualifiable minority manpower exists for business firms and labor unions and that, either through intentional or unintentional discrimination, minority members are not being hired. But this does ot describe the special features and problems of faculty recruitment in American universities. Such a pool does not presently exist, nor is rapid "on-the-job" training possible in the universities in the same way as it is in industry. (There is much talk—and I think considerable uncertainty and confusion based on a lack of knowledge—about what the pool of available talent for faculty recruitment really is. It would be helpful to know how many blacks, women, Chicanos, etc. with Ph.D.s presently not employed in the academic world would like to be employed.)

HEW must become more sensitive to other concerns and considerations of the academic world. In the debate over Affirmative Action there is need to distinguish between short-run psychological gratifications and long-run consequences. Many people cannot manage this long-range perspective. They cannot see that the appeal to defend academic quality and competence is not just a fusty privileged claim made by a special group but is also a claim to maintain the very institutions out of which rational policies and talented problem-solvers must come.

RIGHTS OF MAJORITIES

If a college or university gives preference in its faculty hiring to certain *groups* on racial grounds, it undermines one of its fundamental ideals and precepts, that of *individual* performance and merit. We construct public policies that provide social justice to a class, race or ethnic group, but we do not *hire* a class, race or ethnic group. We hire a *person*. It is important to remind ourselves that this principle about the status of an individual in a democracy is just as precious to the rights of majorities as it is to the rights of minorities.

We in higher education have an obligation to broaden the recruitment base for faculty hiring by conducting a serious and honest search for qualified women and minorities. I also believe that the federal government should help make available the necessary resources to provide expanded opportunities for graduate academic training for women and minorities who want to become doctors, lawyers, engineers, professors and the like. I support a concept of Affirmative Action that has as its goal the elimination of all kinds of discrimination, but I do not support a straight racial line for making faculty apppointments.

We live in a country of many minorities, and many of them have been severely discriminated against for a variety of indefensible reasons. This is why I have never believed that discriminating in *favor* of a minority can be easily distinguished from discriminating *against* a minority.

Governmental encouragement of preferential hiring based solely on racial classifications can only increase the importance of race in our already race-ridden society. My values lead me to believe that a person's race, sex or origins are irrelevant to his individual humanity. They certainly have nothing to do with his ability to teach physics, politics or anything else.

[From Freedom at Issue, November–December 1972]

THE QUOTA MENTALITY

A university president responds to questions on discrimination of academics and alternatives to the quota mentality

(By John H. Bunzel[1])

QUESTIONS THAT INSPIRED PRES. BUNZEL'S RESPONSE

To the Editor: Your journal has devoted much copy this past year to the question of quotas, but has neglected discussing the very real problem of discrimination against minorities and women at universities to which the establishment of quotas is—I hope—only one of many solutions.

I would like to see your contributors answer these questions:

1. Is it true that some blacks and women have been and still are denied opportunities to perform in academic positions for which they are fully able?
2. If not, how do we reconcile the statistics which show qualified Blacks and women to exist with the fact that these groups are not hired, promoted or paid at the levels one would expect in terms of their availability?
3. If we can agree that minorities and women have been treated discriminatorily by universities, what can and should be done to rectify this situation?

Universities are in serious trouble because of their apparently discriminatory record. They need *constructive* criticism and *positive* alternatives. Can your contributors help to define and resolve the problem of discrimination in higher education?

LINDA MACLACHLAN,
Southern Illinois University,
Carbondale, Ill.

---

[1] Dr. Bunzel is president of California State University, San Jose. Three years ago we published his "Replies of a candidate for college president to probes of the California selection committee . . ."

I am grateful for the editor's invitation to allow me to use Ms. MacLachlan's letter as a catalyst for some remarks on the problems of discrimination—both real and alleged—in universities at the present time. Certainly her concerns (though not necessarily her formulation of the issues) are genuinely important and deserve serious consideration. I shall attempt to react to the issues she raises in what seems to me to be their most generic form. In this way I hope to deal more parsimoniously and productively with basic matters at a higher level of generality.

Stated in their broadest form, I take these issues to be three in all: 1) Can quotas solve, or at any rate help to solve, the existing underrepresentation of women and some minorities on the faculties and administration of many institutions of higher education? 2) Is statistical underrepresentation on the faculty and in the administration of numerous universities and colleges prima facie evidence of discrimination against women and some minorities? 3) Since virtually everyone would agree that the existing situation is less than perfect, what recommendations can be made that will improve the present state of affairs?

I. CAN QUOTAS SOLVE OR HELP TO SOLVE THE PROBLEM OF DISCRIMINATION?

Perhaps the most dramatic and far reaching proposal that is central to Ms. MacLachlan's position deals with her affirmation of the need to establish employment quotas as one of a number of ways of overcoming discrimination in university employment. I shall set aside for later consideration an analysis of the arguments she uses to show that discrimination actually exists. Suffice it to say here that I think her position rests on some shaky assumptions. I want to turn instead to the question of whether quotas are defensible in a good cause. I will assume, at least for the purposes of this statement, that all of us can take for granted the desirability of eliminating discrimination. What we need to examine is the claim that employment quotas are a good means—among others—to cope with forms of racial and sexual discrimination which are violations of the law and of the Constitution's guarantee of equal protection.

It is surely one of the mordant signs of the times that it has once again become fashionable in some quarters openly and even aggressively to advocate the use of quotas for one purpose or another. Not so long ago civil libertarians and equalitarians universally regarded quotas as expressive of racist, undemocratic, and authoritarian desires to preserve the sanctity of aristocratic privileges. Today there are not only an increasing number of calls (like Ms. MacLachlan's) for the explicit use of quotas, but in many quarters—even including, according to some interpretations, powerful arms of the federal government like HEW and EEOC—there is influential and determined advocacy in favor of a mandatory statement of employment goals and timetables which are almost invariably thinly disguised functional equivalents of quotas. It is rare that one sees a reasoned defense of such a position beyond the rather simple declaration that the statistical evidence of underrepresentation of certain minorities and women requires the setting of numerical goals or percentages to bring an end to past injustice.

I do not mean to suggest that there cannot be or that there have not been reasoned defenses of the need to eliminate discrimination or to assure greater equality. Such arguments exist in abundance and I am proud to count myself among those who over the years have tried to express them. Nor do we lack for defenders of the democratic faith who (out of a variety of motives) attack contemporary practice in the interest of making it conform more closely to our democratic theories. But at the moment we do seem to be rather short on those whose democratic convictions are sufficiently thoughtful to be able to escape sloganeering and counterproductive solutions to grave problems. Those who advocate quotas have the obligation to state the rationale for their position—and to state it as something more than the anguished expression of their desperate concern for the immediate righting of injustice. Those who shout the loudest or most self-righteously about their passionate belief in justice should not be allowed to bully the opposition. Even those who whisper can be advocates of justice. In short, the advocates of quotas should be expected to define them with reference to their internal consistency, their consequences and their morality and as a social policy consistent with democratic theory and practice.

I suspect that the antipathy of believers in democracy to quotas has always rested on the clear-cut apprehension that they could not be defended in these terms and that they were inherently inconsistent with the Constitution. In my judgment the recent attempts to transform or redeem the principle of quotas by declarative fiat—attempts engendered by our revolution of rising expectations and our relentless self-examination of our shortcomings—have thus far been a dismal failure. The following objections to the use of quotas, while in no sense a definitive answer, muster at least some of the basic reasons for rejecting the attempt to utilize quotas as a social policy designed to reduce or to overcome discrimination.

1. Quotas are self-contradictory when they are insituted as a means to end discrimination. The advocates of quotas who call themselves believers in equality seem to have forgotten the long struggle to resist and overcome quota systems which once kept people from advancement by virtue of their race or religion. Apparently we need to be reminded that quotas are by definition a form of discrimination. When they are invoked in a good cause—that is, when they are used allegedly to overcome discrimination—they require us to believe that we should overcome discrimination against some by discriminating against others. This means that "equality" for group Y must be assured by practicing inequality against group not-Y. In short, we are asked to accept a principle that can be asserted with equal force *in the form of its contrary.*

2. If we assume that quotas can be invoked in a good cause, we fail to see that bad means cannot assure us of good ends. The use of quotas or fixed ratios in university faculty hiring will result in harmful incremental additions to the life and values of our universities. The principle of equality and of reward according to our merits as individuals which presumably inspired the use of quotas—a principle which, properly defined, is central to the integrity of university life and to the democratic culture of which it is a part—will have been abandoned and the character of what remains is likely to be fundamentally transformed and compromised.

There are at least two complex and interactive principles at issue here: means and ends are inextricably intertwined; and bad means exercised in a good cause inevitably and continuously transform the character of institutions since they negatively alter the base line of acceptable practice. We should note that temporary arrangements have a way of persisting beyond their time. In the case of quotas, the projected time tables have been (and presumably must be) so vaguely drawn that it is not illogical to suppose they will become a fixed element of our recruiting process.

3. It is likely that quotas may reduce the incentive for genuine reform. The inequalities that quotas are presumed to diminish originate in widely dispersed aspects of our social and political life. Quotas may too readily provide a disincentive to transform these areas of our national life since they will encourage many to believe that discrimination can be and is being dealt with by relatively mechanical means. Some may argue that quotas are in fact not only the means by which discrimination may be abolished but that the ends of quotas, *i.e.*, the outputs, will in themselves constitute evidence that discrimination is being contained or defeated. After all, such an argument might run, if quotas are successfully enforced, won't the employment statistics reveal that discrimination has ceased to exist? In the presence of such arguments we are perilously close to the never-never land of the murderer who has just killed his parents and now asks for the compassion of the court because he is an orphan.

4. Quotas violate the merit principle *despite their dependence on it as a basis of support.* The injustice of discrimination is by definition an injustice suffered because someone has not been treated according to a universal standard. Some arbitrary or incidental aspect of their identity—their accent, their height, their color—has become the basis of judgments about them *rather than judging them by reference to a standard of merit that applies equally to all.* The most important aspect of this distinction is that it is only in terms of a universal standard of merit that one can conclude that discrimination or injustice has taken place. If such a merit standard had never been articulated, the entire attempt to discover the existence of injustice could never be made. That being the case, we are confronted by the advocates of quotas with the contradictory injunction that we should abandon the merit principle despite the fact that the very discovery of the existence of discrimination rests on the principle of merit.

5. Quotas may—indeed are likely to—make a selfish appeal to group or individual advantage that is fundamentally destructive of the common set of rules which alone binds us together as a people and as a nation. I said earlier that quotas are discriminatory by definition and constituted an authoritatively imposed assault on the right of persons to be treated as the equal of all other

citizens. That is a predictable view of quotas from the vantage point of someone who is *disadvantaged* by a quota.

But let us look at quotas for a moment from the standpoint of a person who presumably stands to gain an *advantage*. Let us suppose such a person is advantaged by a quota because the group to which he belongs is provided with some special priority in order to assure that group more adequate representation. Is it an exaggeration to say that a person so advantaged is being treated unequally? Isn't he or she being given an advantage by restricting someone else's access to equal opportunity? Such an advantage, especially when purposely imposed from above to prearrange certain outcomes, seems to me to constitute an injustice.

But I would like to go further. I would contend that from a higher contextual point of view not only the victim but also the perpetrator or the recipient of this kind of quota-advantage is harmed—without, I might add, needing to be a conscious advocate of discrimination. Indeed we may readily assume that such a person would be horrified by the notion that his or her conduct constitutes an injustice. Nonetheless, that momentary advantage rests on discrimination and has been bought at the expense of compromising the common-sense notion of justice which Aristotle and others have argued makes the very existence of the polis possible. To the extent that quotas encourage any of us, knowingly or not, to legitimate our personal advantage in the name of social justice, everyone is victimized. Justice is not served. In fact, justice is given such bewildering meaning (*e.g.* it becomes the basis for the justification of discrimination) that the cause of justice can only suffer once the consequences of such policies become clear and their principle is mistakenly applied to other aspects of our lives.

6. Quotas are counterproductive in that they are designed to end discrimination (though they require its perpetuation) and presumably are also regarded as a contribution to the establishment of a society where race and religion are not factors in our success or failure as social beings. But as numbers of groups and individuals begin to react to overly zealous interpretations of the meaning of "employment goals" it is increasingly clear that quotas are much more likely to make consciousness of racial and sexual differences more morbid and pathological. In short, quotas are counterproductive because they inflame rather than heal.

One can and should support affirmative action programs designed to increase the employment of minorities and women provided they do not give preferential treatment to a person or group over another on the basis of race or creed. In the words of Milton A. Senn, director of the Anti-Defamation League's Pacific Southwest Office, such behavior is "destructive of equal opportunity and violative of the Constitution and Federal and State laws and can only result in *exacerbating tensions and bias*." [my italics] How could it be otherwise? After all, quotas are a form of discrimination which, in the interest of setting things right, create new classes of victims. By virtue of this contradictory character, they make worse precisely the situation they hope to improve.

7. Quotas will help to make us into a society in which what matters profoundly to many people personally—their race, their religion, their ethnic origins and associations—is authoritatively made the business of everyone. There is, of course, a sense in which what matters to each of us *should* matter to all of us. I do not wish to deny that "no man is an island unto himself," or that it is essential for each of us to respect one another's views within the bounds of agreed upon definitions of the nature of freedom. But the authority of the state should not be used to force everyone to accept aspects of our being which are individually private but in some contexts ought to be socially neutral or at any rate marginal in their meaning and relevance. Why should it matter to a Department of English whether a Chaucer specialist is a Mexican-American or a Black-American? It matters very much to each of these people, and it should matter to all of us, that each should be safeguarded in the preservation of his or her right to be a Mexican-American or a Black-American. But from the point of view of a university's commitment to the pursuit of excellence and to the neutrality of scholarship, such aspects of our being are irrelevant. Is there a German-American form of physical education or a Russian-American form of biology? Haven't we been through enough in recent decades to know the answer to such questions? Should there be quotas set to assure that .05 percent of all elevator operators are American-Indians and that three percent of all university faculty are jewish because those are the proportions that exist in the general population? Who will be em-

powered to set these figures and for which occupations? Which groups are to be identified as deserving of quota benefits? Can employment quotas be monitored in such a way that we can still preserve our beliefs in the inviolability of the individual and in the free choice of our citizens?

It is not merely a rhetorical device to raise such questions without providing the answers. They bring into focus the far-ranging incursions on our freedom which quotas will inevitably encourage. We need to raise such questions in order to see that they cannot be answered—or, perhaps more exactly, that they cannot be answered in a way consistent with a belief in a free society committed to the preservation of individual rights.

These matters are so complex that they undoubtedly suffer from being treated in such brief compass. In the interest of avoiding confusion or being misunderstood, let me restate my belief that pride in one's color, ethnic origins, and religion are all aspects of a healthy pluralistic American democracy. My point has been that these ways of establishing and sustaining our personal identity and individual characteristics through our ties with groups ought not to be the basis of employment either in the university or elsewhere.

It is clear that for many Americans group affiliations are an important or sometime an indispensable part of their very being. But *if* these aspects of our personal identity are made legally relevant to the political arena or to the economic market place, we will have subverted freedom in the naive interest of pseudo-freedom. And we will have taken a step backwards away from community to reliance on primordial sentiments in the war of all against all. That, at any rate, is how I interpret a view which argues that some insignificant aspect of someone's right to be a Greek Orthodox-American must be granted at the expense of someone else's right to be a non-Greek Orthodox-American. After all, there is no obscuring the intransigent fact that establishing a minimum quota for the employment of Ukranian-Americans inexorably means that we have also established a maximum quota for the employment of all non-Ukranian Americans.

II. IS STATISTICAL UNDERREPRESENTATION ON THE FACULTY OF A UNIVERSITY PRIMA FACIE EVIDENCE OF DISCRIMINATION?

Ms. MacLachlan asks whether some women and black people (she is silent about the status of other minorities, perhaps because the case is more complicated than she is prepared to admit) are still denied employment opportunities or advancement in universities despite their impeccable qualifications. Let me be brief and to the point: the answer is that such discrimination exists and will continue to exist for a very long time, partly because we are dealing with the affairs of human beings and not of gods. But this manifest discrimination is not in every instance, or even in the main, synonymous with under-utilization or underrepresentation. When I say that discrimination exists, I have in mind those feelings of irrational prejudice and even hatred which are an omnipresent aspect of the darker side of man's nature, whether man is identified as the victim of racism or as one of its perpetrators.

But that is the brief answer to the wrong question. We must, to be sure, find out why sexual and racial discrimination exists—and doing so is a suitable subject of empirical inquiry for social psychologists, moralists, political theorists, and others. However, I am concerned with the question of what we are entitled to conclude from the evidence of statistical underrepresentation. Ms. MacLachlan's conclusions are in the main *non sequiturs*, in part because she seems automatically to equate discrimination with underrepresentation. This is clear when she proceeds to answer her first question with another question which, by implication, seems to assert that it is impossible to explain the underutilization of women and blacks unless we assume that this underutilization means they are the victims of discrimination. It is this conclusion that I want to examine by addressing myself to the most generic form of this issue: is statistical underrepresentation on the faculty of a university prima facie evidence of discrimination? This, it seems to me, is the *right* question.

Surely all of us have encountered the seemingly powerful argument that statistical underrepresentation provides the irrefutable evidence of discrimination and inequality. Such a view is complicated by the fact that there is rarely any general agreement, either by the advocates of such a view or by their opponents, about the appropriate base point against which to measure this alleged discrimination. Sometimes the base point is presumed to be the nation, the state, the region, the city, or some other official or unofficial geographical entity. Obviously, it it likely to make a considerable difference whether a state like North Dakota, where black people are a tiny percent of the population, is required to construct its public institutions so that black civil servants are proportionate to the number of black people in North Dakota or whether they should construct their institutions to reflect the fact that black people are fourteen percent of the population of the United States.

We could readily parallel this problem with an exemplary university analogue. Should a department of micro-biology at Yale University contain minorities proportionate to the number of minorities in New Haven, Connecticut, the Connecticut Valley, New England, or the United States in order to provide statistical evidence of non-discrimination? Should such a calculation include all the minorities in the country or should it include only those minorities that reside in New Haven or Connecticut? Or perhaps the proportion of minorities employed by the department of micro-biology should be proportionate only to the number of minorities with Ph.D's in micro-biology that presently reside within the limits of the continental United States? Or we might well consider the possibility that only those Ph.D.'s who are actively in the job market ought to be counted as part of the manpower pool since, for example, a black woman with a Ph.D. in micro-biology might have deliberately chosen to spend an indeterminate number of years rearing her children, writing novels or doing something else.

Still another version of this problem is evidenced in trying to determine what sort of statistical information is required of a university to demonstrate that it it is not engaged in discrimination or the willful perpetuation of inequality. (Such a formulation of the problem raises a very serious difficulty: are universities being required to demonstrate their innocence as if they are already guilty rather than being required to defend themselves against charges of guilt arrived at according to a known public standard of justice? Have they, in short, lost the right to be considered innocent until proven guilty because the gross evidence of statistical underrepresentation is presumed to provide prima facie evidence of their guilt?) Shall we require that each department or cluster of departments demonstrate statistical evidence of the employment of a proportionate number of minorities or shall we require that the employment figures for the entire university reveal the retention of a requisite number of women and minorities? And how are these numbers to be established?

These are all complications attendant to monitoring or assessing the existence of what is often called discrimination, disproportionality, or underutilization. Such complications are likely to have come into existence because we may already have concluded that statistical underrepresentation of minorities and women is, in fact, prima facie evidence of unequal treatment or discrimination.

But is that the case? In order to appreciate why it is not, we will have to unravel multiple confusions, some having to do with careless attempts to make words like "discrimination" and "unequal" synonymous with terms like "disproportionate" and underutilized." For example, do we really mean to argue that because Jews constitute three percent of the total population of the country that they should be represented in that proportion in the police force of Oshkosh or Chicago? If less than three percent of the oil-rig workers in the southwest are Jewish, does that provide us with unmistakable evidence that their underrepresentation demonstrates the existence of unequal treatment? (Note that I am not arguing that underrepresentation never provides evidence relevant to the discovery of discrimination. Of course it might. But does it constitute prima facie evidence of discrimination?) The absurdity of such a notion is self-evident and becomes additionally implausible if we continue to ask such questions about the proportions of Samoans who are insurance salesmen, Eskimos who are mechanics, and so on.

The most general difficulty with the argument that underutilization/disproportionality equals discrimination is that it conveniently overlooks the fact that there have always been—and, presumably, always will be, unless we submit to some sort of totalitarian homogenization of our pluralist culture—differences of values, orientation, taste, expectation and the like among the varied groups that compose this or any other nation. Many cruel perversions of our political life as a nation have exacerbated these differences, sometimes making them into heavy burdens or vicious stereotypes which have barred the way of some minorities to advancement. We need to continue and indeed to deepen our moral resistance and our legal opposition to such betrayals of the principle that all men are created equal. But to do this effectively we must have a clear mind about what is to be concluded from our observations of the real world. The fact is that many of the differences of group outlook to which I have referred—differences that have influenced a disproportionate number of Italians to become opera singers, a disproportionate number of Armenians to become truck farmers, and a disproportionate number of Jews to become doctors, college professors, and novelists (and, if C.P. Snow is correct, to constitute almost half of those ever awarded the Nobel prize for excellence in science)—these differences express prima facie evidence not of discrimination but rather of the vitality of democracy. These specialized choices are derived from deep allegiances to group loyalties, to religious ties, to sentimental attachments, to cherished traditions and ethnic identification. It is not necessary to believe that every aspect of these choices has been freed of constraint in every respect in order to defend them as expressions of democracy. Such a view would be perfectionistic and unrealistic. It is only important to understand that the alternative to such choices—quota arrangements that would assure proportionality—is an infinitely greater source of constraints on our freedom and provides absolutely no assurance—either with reference to logic or the record of social practice—of possible success. It is also important to understand that many of these choices that have resulted in disproportionality were made in an environment that offered alternative possibilities.

III. WHAT RECOMMENDATIONS CAN BE MADE THAT WILL IMPROVE THE PRESENT STATE OF AFFAIRS

In addition to a strict prohibition against job discrimination, higher education should support two basic propositions:

1. A serious search must be made for qualified women and minorities when faculty appointments are being made. At the departmental level, where academic recruitment is initiated, procedures should be established to include a current and realistic estimate of the pool of qualified individuals from which candidates will be drawn. Carefully balancing professional interests and priorities as it sets its own programmatic needs, the department must constantly strive to attract the best faculty possible. To this end it should also demonstrate that it has reached out in its search for women and minorities. All too often a departmental canvass is woefully incomplete, confined only to familiar channels which fail to inform women and minority persons of the existence of jobs. Departments should be put under the obligation—monitored by the administration—of conducting a determined search for women and minority group candidates.

2. Expanded opportunities must be provided for academic training at the graduate level for women and minority group members. The federal government, state legislatures, and private foundations, as well as business and industry, should make available the necessary resources as further confirmation that as a society we must be more than passive if increased employment opportunities for women and minorities in higher education are to be achieved in fact as well as in legal theory.

All of us need to be encouraged to think about a real Affirmative Action program. We also need to be clear about what it means to propose such a program. A quick numbers game will not solve the real problem of the minority imbalance that exists in virtually every field or discipline. It is an easy but deceptive and ultimately expensive solution. Nor is a straight racial line for making faculty appointments supportable. To move to the concept of race (or sex) as an exclusive or predominant criterion for faculty hiring is a major qualitative change which undermines the principle of academic competence so essential to an institution of higher learning.

I believe the most promising hope lies in a combination of longer-term efforts that range from introducing minority high school students at the earliest age possible to the opportunities available to them in medicine, law, teaching, etc., to motivating those with potential as college undegraduates to pursue careers at the professional level, so that the ranks of the truly qualified will be legitimately expanded.

The kind of Affirmative Action program I have in mind would be substantial and significant. With the help of the federal government there would be fellowship programs for people *before* they become incapacitated students. We need to rescue good minds at the high school level before they become dulled and ill-equipped to go on to college. This country would be willing to pay for an educational program that would benefit the handicapped, by which I mean giving people, on a non-discriminatory basis, a chance to overcome poverty, a bad family situation, and the like.

I believe that to attack our colleges and universities today is really to attack the wrong stage of the development. As I have suggested, we need to mass our remedial efforts in the form of state and national search programs at the high school level where talented young people—blacks, Chicanos, poor whites, which is to say all of the disadvantaged who otherwise get locked into a lifetime of inequality—can be found and helped. It seems to me that much of the current emphasis being put into enforcement could wisely and profitably be put into discovery and assistance.

[From Change, October 1972]

THE POLITICS OF QUOTAS

(By John H. Bunzel)[1]

For the past several years the Civil Rights Office of the Department of Health, Education and Welfare has been investigating colleges and universities. That office has taken on the responsibility of reviewing programs of Affirmative Action that are required to establish specific recruitment goals and timetables to assure an immediate increase in the percentage of minority and women faculty members and staff employees. Apparently convinced that enforcement action against our colleges and universities is necessary because they do not "think right" about the problem of alleged discrimination and what should be done to correct it, HEW has made Affirmative Action one of the most divisive issues in American higher education, and possibly one of the most anti-intellectual.

Along with most of my academic colleagues, I strongly believe we should recruit more women and minorities as faculty members on an equal opportunity and non-discriminatory basis. Women in particular have not been accorded fair and equal treatment by the academic world, and it is time we admitted it. But I am opposed to the use of any form of quota system that would distinguish race or sex as an exclusive or predominant criterion for hiring.

The distinction is important because the debate over Affirmative Action increasingly echoes Stokeley Carmichael's: if you are not actively with us, you are actively against us. When applied to the academic world, this simplistic moral absolute denies legitimacy to complicated and inevitably vexing questions.

J. Stanley Pottinger, the director of HEW's Office for Civil Rights, said recently that he "never understood academic freedom to deny a qualified person an opportunity for appointment or advancement because of race or sex, or the right to pay one person less than a person of another race or sex performing the same job." He is absolutely right, just as he is right in pointing out that the "real objective of the law against discrimination is to ensure equal opportunity to all persons regardless of their race, sex, religion, color or national origin." There can be no quarrel with Mr. Pottinger on these points, or with his belief that university administrators and faculties must examine "their own practices and profiles to determine whether discrimination exists and how it may best be remedied." It is also reassuring to learn from him that an individual's professional qualifications are still "the primary standard for hiring and are at the heart of the Executive Order that HEW enforces."

But are they? Or are universities being encouraged to introduce into the appointment process nonacademic criteria such as sex and race? Are traditional academic or intellectual qualifications to be temporarily suspended (how long is temporary?) until the proportion of women and certain minority groups becomes "acceptable"? I state the problem this bluntly to sharpen the issue, and because the intent and meaning of Affirmative Action are considerably obscure. HEW must become more sensitive to the problem of conflicting principles: that in the name of undoing past discrimination, methods may be encouraged that risk perpetuating the very racial barriers the government is charged with eliminating. As a society we need urgently to remove the many injustices the disadvantaged and minorities have suffered. But colleges and universities must not adopt unjust or undemocratic means to achieve laudable goals. If we set aside a white candidate who is more qualified than a black or brown competitor *because* he is white, we will be discriminating according to race. And once that process gets legitimated, there is no stopping it.

---

[1] John A. Bunzel, a political scientist, is president of California State University at San Jose, California. He is the author of *The American Small Businessman* (Knopf 1962) and *Anti-Politics in America* (Knopf 1967).

If we are to examine the real or potential effects of Affirmative Action, we need to move from generalities and rhetoric to specific concerns about implementation. For example, blacks, Mexican-Americans, and other groups are not heavily represented on college faculties. Some say that our colleges and universities should therefore move at once to bring about a statistically acceptable representation of women and minorities on their faculties. Others go so far as to say there should be a formula for proportional representation of races and sexes. But a university does not and should not make faculty appointments the way the Democratic Party chooses convention delegates. The proper goal is to hire the best qualified person, and the paramount criteria should be accomplishment and capacity in teaching and research. We often hear the argument that academic hiring frequently violates merit criteria—hence why get upset about Affirmative Action hiring? The most honest response is to acknowledge that the charge is sometimes true, but to insist that failure to act always according to principle does not discredit the principle. Rather than abandoning it, we should concentrate our efforts on making it more consistently honored.

HEW's strategy of Affirmative Action seeks to apply remedies that are not suitable to the specialized conditions in the academic world. Each institution in a pluralistic society has unique characteristics, and those of a university should be recognized—and defended—by the government. It may well be that many qualified or easily qualifiable minority people exist for business firms and labor unions and that, either through intentional or unintentional discrimination, they are not being hired. But this does not describe the special features and problems of faculty recruitment.

Consider another troublesome issue. Does Affirmative Action mean that a university is expected to freeze or set aside faculty positions until women and members of certain minority groups are added to departments where they are now underrepresented even if this results in rejecting a better qualified applicant? The question is not hypothetical. Last spring a man received the following letter from a state university:

"I am sorry to report that although our Department saw you as our top candidate we will not be able to make you an offer for our new position.

"Our university is an Affirmative Action Employer and the Department must attempt to fill the new position with an individual from a recognized oppressed minority group. Although the Department initially viewed your ancestry as satisfying the requirements of Affirmative Action, consultation with our institutional advisors on the Affirmative Action Program indicated to us that your ancestry does not qualify you as an oppressed minority.

"I wish you the best of luck in your future, and I am deeply sorry we were not able to extend an offer to you."

There is a certain schizophrenia running through the whole posture of Affirmative Action. Presidential Executive Orders 11246 (1965) and 11375 (1967) are responsible for its birth and reflect the unobjectionable policy of the Civil Rights Act of 1964 that all contractors with the government "will take affirmative action to ensure that employees are treated during employment without regard to their race, color, religion, sex or national origin." But the Department of Labor's Order No. 4 charted a different course which, in the hands of HEW's advocates of an aggressive Affirmative Action program, has introduced the concept of race into academic deliberations, reopened the door to the idea of quotas as a way for colleges to meet their "goals" and "timetables," and affirmed the principle that preference in hiring should be given to women and certain minority groups when faculty appointments are to be made. Thus Affirmative Action is governed by two sets of criteria with quite different genealogies. One draws on the tradition rooted in Justice Harlan's observation that the Constitution is "color-blind" and thus does not allow discriminatory preference for any group, minority or majority, while the other asserts that the Constitution's equal protection clause allows race to become a factor in employment when identification by race is intended to help those for whose protection the Fourteenth Amendment was enacted. The former accords equal rights to all persons regardless of race and does not command that members of any groups be given preference in hiring because they were formerly the subject of discrimination or because they are members of a minority group. The latter claims that racial identification in hiring is necessary, given the compelling interest of the state in overcoming past discrimination. Further, it is a strategy that seems to assume that preferential treatment based on race is a rational means of implementing that interest.

There are many in the academic community who believe that what is indicated now by Affirmative Action is a set of strategies and goals that would encourage preference for women and certain minority groups in the filling of faculty positions even when it is necessary to discriminate against those whose qualifications are found to be superior. HEW officials maintain that "goals" are not quotas, but simply a way of evaluating whether a university is meeting its Affirmative Action obligations within a specified time period. When is a quota not a quota? When it is a "numerical goal?" As one college official admitted privately, "Academics don't like the smell of quotas, and 'goals' is an inoffensive and much milder term. It doesn't suggest anything unpleasant to the faculty." Is there really a significant difference between a university setting a *quota* of 10 percent bearded Republicans for the faculty within five years, and announcing as its *goal* the hiring of 10 percent bearded Republicans for the faculty within five years? Are not the two virtually synonymous? Perhaps, the difference is a matter of perception: For HEW, which seeks to impose them they are called "goals;" for an academic department, which must apply them in the hiring process, they become "quotas."

Further, by what standards will HEW evaluate the Affirmative Action goals it requires colleges and universities to establish? HEW says it will decide whether or not the goals are reasonable. But what is reasonable? We are entitled to know the criteria, particulary what numerical goals really represent and how they will be calculated and determined.

The language of Revised Order No. 4 indicates that numerical goals were intended primarily for industrial employment and not for university faculty appointments. It states: "An Affirmative Action program is a set of specific and result-oriented procedures to which a contractor commits himself to apply every good faith effort. . . . An acceptable Affirmative Action program must include . . . goals and timetables to which the contractor's good faith efforts must be directed to correct deficiencies and thus to increase materially the utilization of minorities and women, at all levels and in all segments of his work force where deficiencies exist." But why must a university compute numerical goals and timetables by academic department if specified and result oriented procedures (e.g. broadening the base for faculty recruitment) are strictly enforced with respect to appointments?

There are other difficulties with the statements about goals in Revised Order No. 4. As Richard A. Lester, dean of the faculty of Princeton University, points out, goals are to be specific numbers, to be measurable, and to have timetables attached to them, but are not to "be rigid and inflexible." One cannot help but wonder, he says, what a measurable and specific yet flexible goal with a timetable in an affirmative action program will look like. Goals are supposed to be "targets that are reasonably attainable, but *reasonable* means "applying every good faith effort to make all aspects of the entire Affirmative Action program work." Dean Lester remarks that that is like saying it is a reasonable human expectation to assume that everyone will work at his peak capacity.

HEW has said that a university's attainment of specific numerical goals according to the timetables in its affirmative action program will not be the single test of compliance or non-compliance. But are goals and timetables intended as a commitment? They will certainly be perceived as such by various groups on campus, which will then hold the university accountable. If goals and timetables are to be an important test of compliance, "goals" must involve some conception of quotas. HEW assures us that it is not advocating rigid and inflexible quotas that must be met. But are there some sort of non-rigid, flexible quotas that could be applied in a flexible manner to determine if the university is or is not in compliance? The problem with applying of numerical goals in a flexible manner is that there is no way of predicting how it will work in practice.

But many will doubtless wonder why HEW shouldn't insist on "good faith efforts" to achieve numerical goals within a given time? There are at least two more reasons. First, by stating the university's primary obligation in numerical terms, by failing to specify what "good faith efforts" will be acceptable, and by placing upon the university that has not achieved its "goal" the burden of proving that it did all that was legally permissible to meet it—by doing these things, HEW so weights the procedural scales against the nonachieving university as to oblige it in fact, if not in law, to discriminate in favor of certain groups.

Second, colleges and universities will be encouraged to make faculty appointments and promotions not on the basis of a person's individual worth, but as a member of a minority group. If a college or university gives preference in its faculty hiring to certain groups on racial grounds, it undermines one of the fundamental ideals and precepts, that of individual performance and merit. We construct public policies that provide social justice to a class, race or ethnic group, but we do not *hire* a class, race or ethnic group. We hire a *person*.

A black scholar, for example, was being considered last year for a faculty position at a large northern university. He was highly recommended and was clearly among the best candidates the department had interviewed. "I hope I am not being considered because I am black," he said later. "I like to think I have enough self-respect to be judged solely on my qualifications. I have no need or desire to be a token."

If HEW were to confront the reality of the academic marketplace, it would have to envision drastic, but as yet unspecified, changes in hiring—and firing—in our colleges and universities. The institution's Affirmative Action goals cannot be divorced from the reality of the academic job market. In addition to the availability of new faculty, there is also the question of what happens to present faculty.

For the sake of simple arithmetic, assume that a college faculty in 1972 numbers 1000, ten percent of whom are minority-group members. Assume also that the announced goal at the end of five years is to raise the 10 percent to 30 percent. If the faculty in 1977 remains the same size, it would be necessary to hire 200 minority-group members to meet the goals set for 1977. In other words, minority-group hiring would virtually monopolize all faculty hiring until the goal was met. Aside from the problem of finding and recruiting that number of qualified minority people, will there be 200 openings over a five-year period in a 1000-member faculty? One school in a large university plotted the number of full-time faculty members (78) against their years of birth and discovered that only eight people will retire through 1981. Short of firing full-time faculty to make room for minorities, or expanding programs and increasing faculty allocations, these figures suggest an upper limit on expectations for change in the near future.

An atmosphere of condescension, contradiction, and reverse discrimination must inevitably surround any attempt to "legalize" preferential hiring in favor of certain individuals or groups solely on racial grounds. The clear implication is that minorities will be granted an enormous favor if they enter the competitive arena under some preferential auspices. Is there any compelling evidence that they would wholeheartedly appreciate or welcome such a decision? It is one thing to enable those who have been unfairly disadvantaged to compete—and this we must do; it is something else again to do away with competition altogether or to provide the real or alleged victims of discrimination with redress by discriminating against others. Earl Raab has made the important observation that one of the characteristics of a free society is the ascendance of performance over ancestry, or what he calls "the ascendance of achieved status over ascribed status."

Nor can all minority groups be preferred equally: some will inevitably be considered more "preferred" than others. Once the principle of preferential hiring has been adopted, say, for blacks, it will only be a matter of time before other minority groups will demand similar preferential advantages. (As of December 23, 1971, the Department of Labor proposes to include in its guidelines intended to remedy unfair treatment "Jews and Catholics, and members of certain ethnic groups, primarily of Eastern, Middle, and Southern European ancestry, such as Italians, Greeks, and Slavic groups." Apparently they were overlooked in earlier interpretations.) Once institutionalized, the principle of preferential hiring is not likely to decrease the potential for discontent and divisiveness. Indeed, it is likely to set minority against minority, since it encourages basically irrational schemes of compensatory redress.

In short, we may, paradoxically, be deepening and exacerbating precisely the situation we have set ourselves to avoid by increasing the already pronounced tendency to politicize and racialize more and more aspects of modern life. In the *Atlantic* (August 1968), Daniel P. Moynihan warned us we have so far been unable to assemble the political majority that would enable the nation to provide a free and equal place for the Negro in the larger society. We have used what are essentially market strategies, like full employment, income supplementation, and housing construction; but the failure of such methods will drive us to institutional strategies involving government-dictated outcomes against those institutions—colleges and universities, for example—most sympathetic to social change and most vulnerable to government pressure. Events are on the way to proving him right and endangering precisely those institutions that "must provide the moral and technical leadership for rational, peaceful and democratic change."

One of the most critical issues is the extent to which the commitment to increase the percentage of minorities in college faculties can co-exist with the maintenance of professional standards in hiring and retention. It is entirely possible that present professional standards will inadvertently keep the number of minority faculty appointments disproportionately low. The outcome of that unhappy situation may then be to discredit the professional standards. Perhaps we should maintain standards and then deliberately and openly depart from them in the name of social justice by adopting a system of quota hiring of underqualified applicants. But after that process has been operating for a time we will still have to ask if it has been successful, and the horns of that dilemma are sharp indeed. Who would feel able to state publicly that the underqualified faculty have performed poorly? Who would be willing to count the high social costs that might ultimately far outweigh the immediate benefits gained by making an exception to professional criteria? I am not saying that underqualified appointees can never become qualified, and there may be times when mere formal qualification is meaningless. But when apprehension about social injustice toward a group prevents our making a clear-headed judgment about an individual, when one feels compelled to assert in all cases that the underqualified did as well as the qualified, then what happens to our long-cherished professional criteria?

Other thorny problems follow. For example, how far, and for how long, must we live with what may prove to be a double standard of evaluation? In colleges and universities where scholarly research and publication are a basic norm, are Affirmative Action appointments to be exempted from meeting such standards? (The same question applies to teaching ability and competence in the discipline.) If the percentage of articles submitted to and accepted by the professional journals from minority-group faculty is well under the percentage of minority faculty in the particular discipline, would a doctrine of "preferential compensation" lead publishers to accept otherwise unqualified articles? If so, how can we justify a hiring policy that neglects the imperative to encourage high standards?

Other questions have to do with the consequences of establishing dual sets of criteria for faculty appointment and retention. What happens if a minority person who has been given a faculty appointment that can lead to tenure proves inadequate—but his ethnic group on campus demands that he be retained? One of the serious implications of having undefined, irrelevant, or nonacademic criteria initially is that it sets the stage for the special claims of ethnic groups that only *they* are able to understand and pass judgment on the merits of members of their groups. If academic criteria are ruled out from the beginning, it is virtually impossible to legitimate their use later on.

Giving faculty appointments immediately to large numbers of relatively unqualified persons will do a serious disservice to all graduate students presently pursuing their degrees, and, indeed, to all students. These students began their careers not so many years ago on the assumption that their training would be needed in higher education. Are they now to be told that the available faculty positions—already considerably diminished because of the financial crisis in higher education—are to be given on some basis *other* than academic preparation and qualifications? Will committing ourselves to the goals of Affirmative Action reduce or even abandon our responsibility to these students? And what of our superior undergraduates of all races and ethnic groups who want to get the PhD degree and become college professors? Against the tangled and discouraging backdrop of goals, quotas, and preferential hiring, will they perceive any future in academic life?

We are, therefore, caught in a complicated dilemma—the need to choose between two positions, both of which are morally defensible:

Position Number One: Preferential treatment must be given to disadvantaged minorities in this country if they are to be freed from the grip of poverty and despair that locks them into a lifetime of inequality. We must break the vicious circle of unequal employment opportunity that leads to unequal housing opportunity, unequal education opportunity and back to continued unequal employment opportunity. Equal treatment will not break the circle fast enough and by itself will not assure real equality of opportunity. Thus the drive for preferential treatment.

Position Number Two: A self-respecting college or university will want to choose the best qualified person available for a faculty appointment. Race or sex or color are inappropriate tests of an individual's competence to do research, to explore ideas and to transmit knowledge. The best way to end competitive inequality among groups is to step up the percentage of disadvantaged students who go to college and provide them with the highest possible quality instruction.

How do we mediate between these two positions? First, we must recognize that Affirmative Action is not simply a program that yields gains and benefits. It also entails demonstrable costs and consequences. To believe otherwise is to fail to understand that what one person gains under Affirmative Action may well be taken away from someone else. To an educator the balancing notion is mischievous because it is likely to mean giving up the principle of merit and accomplishment that is central to the integrity of higher education. I prefer giving those who have been unfairly disadvantaged the opportunity to compete fully and fairly on genuinely equal terms, rather than imposing or forcing an equality of outcomes that is artificially rigged.

Amidst the divergence of assertions and assumptions, Affirmative Action must ultimately be viewed in relation to other competing and legitimate values and in light of many practical problems. When there is such a collision of rights and conflict of principles, the important question is how one balances one's obligations.

A simple prohibition against job discrimination is not enough. Higher education must embark upon these two goals:

An unprecedented search must be made for qualfied women and minorities. At the departmental level, procedures should be established to include a current and realistic estimate of the pool of qualified people from which candidates will be drawn. Carefully balancing professional interests and priorities as it determines its own needs, a department must constantly strive to attract the best faculty possible. All too often a departmental search is woefully incomplete, confined only to familiar channels that fail to inform women and minority persons of the existence of jobs. To this end, the administration should obligate departments to demonstrate that they have reached out in their search for women and minorities.

Increased opportunities must be provided for academic training at the graduate level for women and minorities who want to become doctors, lawyers, professors and the like. The federal government should help make available the necessary resources to confirm that our society is seriously committed to increasing academic employment opportunities for women and minorities that are to be achieved. The most promising hope for a solution lies in combining longer-term efforts. We can introduce minority high school students at the earliest age possible to the opportunities available to them in medicine, law, teaching, and the like. We can motivate and encourage those with potential as undergraduates to pursue careers at the professional level, so that the ranks of the truly qualified will be legitimately expanded.

These goals are neither definitive nor exhaustive. They deserve support because they are intended to eradicate attitudes that discourage women and minorities from trying to enter the academic world. What is *not* supportable is a straight racial line for making faculty appointments.

My own values lead me to support a program of Affirmative Action that has as its major goal the elimination of all kinds of discrimination and that accepts the principle that in a democratic society an individual's worth has a higher moral claim than his color, his sex, or his origins.

[From Change, October 1972]

COMPUTING MINORITIES

(By Robert Perrin)[1]

To establish compliance with recent laws, executive orders and affirmative action plans—as other articles in this issue indicate—colleges and universities increasingly must play the "numbers game," a game involving the collection of vast amounts of statistical data concerning the identities of employees and students of a school.

---

[1] Robert Perrin is the Vice President for University Relations at Michigan State University.

They must total the numbers of women and minorities in the tenure stream, determine whether they have temporary or part-time appointments, and classify them by rank, service and salary. Non-academic employment by salary and distribution, records of applicant flow and promotions, and other hard, non-subjective statistics must be collected—all purporting to indicate whether the institutions are heading toward the utopia of true equality.

The need for such data is part of the new, more sophisticated approach to civil rights. It is no longer sufficient to show that the lunch counter is now open to all comers or that the want ads no longer specify "male help wanted." Those were the tin lizzie days of equality; today's computer age demands more complex grist designed specifically to be compatible with electronic circuitry. Today, progress must be shown on the computer print-out.

Once computer programs satisfy those who feel that numbers are the ultimate answer, quarterly or semi-annual regurgitation of the latest statistics becomes relatively simple. Not wholly so, however, since the Federal government has been slow in realizing that employment descriptions and practices in an institution of higher education are not as easily quantifiable as, say, those of an automobile plant. There is always someone who wants just a little different cut from the data than what was fed into the machine.

Nevertheless, most institutions are struggling to provide the demanded information. At best, their motivation is to equip themselves with a genuine measure of progress in correcting inequities and assuring equality; at worst, it may help forestall the Federal government from cutting off contract funds.

The collection of statistical data on employees, however, is only one part of the numbers game. In some ways, it is the simplest part because permanent personnel records are an essential ingredient of any business operation. However, under Title VI of the Civil Rights Act of 1964, the Department of Health, Education and Welfare also demands a minority census of the student body. This can be a very complex undertaking, especially at an institution such as Michigan State University, with more than 41,000 students on its campus.

The requirement to produce data on racial and ethnic identities is, of course, a 180-degree turn from the practice of the 1950s and early 1960s when such inquiries into an individual's background were considered a gross violation of his or her civil rights. The attitude then was a natural counter-reaction to the historic misuse of minority information to prevent an individual from obtaining employment or entrance into a college. However, the civil rights activism which led to the trail-blazing Federal legislation in 1964 put things in a different focus: affirmative action for minorities. Thus the headcount census turned into an important means for an institution to prove progress and compliance.

Unfortunately, this reversal has not always been accompanied by either full understanding or cooperation among the persons being counted. Nor has the government provided easy-to-follow guidelines and definitions for compiling statistics. HEW tells us, for example, that:

"a student may be included in the minority group to which he appears to belong, is regarded in the community as belonging, or categorizes himself as belonging."

This rather loose standard can produce rather bizarre results—as when 150 of MSU's students "categorized" themselves as American Indians, more than triple the actual number. To top things off, responses by the students are voluntary. And students from minority groups may view such requests with suspicion and apprehension. It is all very well to tell students that such information is requested only after they have been admitted to the university, that Federal support depends on compliance, that the university needs the data to determine its own progress and that the information is confidential, but such arguments have not been altogether successful. The university thus often must choose between a once-over estimate to satisfy minimum Federal requirements, and an honest count that can serve the institution internally and publicly.

Michigan State University has been conducting its minority student census in a formal, systematic manner only since 1970. Prior to that time, its counting was based mainly on eyeball observation. (Indeed, counting was not much of a problem. As recently as 1967, it was estimated that there were 690 blacks among the student body; in the fall of 1971, the census showed 2509.)

The 1970–71 count was conducted at September registration for everyone except freshmen, who took part in the census during their summer orientation sessions. Registration always is a hectic time—often describe as organized chaos. 30,000 to 40,000 must juggle course schedules, pay fees, arrange financial aid, secure identification cards and move into their residences, all within three days. Accomplishing these tasks with a minimum of confusion is always enough of a challenge without inquiring into students' ancestry or color of skin. Yet registration also is the only time in the academic year when the university administration is assured of a captive audience: the receipt from that final fee-payment checkpoint must be secured before enrollment is valid.

Thus, the registration paraphernalia with which each student was equipped in September 1970 included a computer card upon which he or she was to mark ethnic data. The card listed the usual categories: American Indian, black, Oriental, Spanish American and "all other students." Foreign students were to be excluded. In an effort to overcome philosophical or visceral opposition to the census, "EQUAL OPPORTUNITY" was printed on the card and it carried the statement:

"Michigan State University is dedicated to equal opportunity. In order that the university be able to assess its progress in enrolling minority students, and to meet Federal requirements for funding of special support and educational programs, it isnecessary to obtain an ethnic classification of students. Please cooperate; it is to your benefit."

And although participation in the census was voluntary, the card had this final admonition in small type: "Falsification of a university record is cause for cancellation of registration."

The first census in 1970 was not an unalloyed success. Out of 40,000 students who moved through the registration process, more than 4,000 bypassed the census checkpoint and failed to deposit their cards. An untold number of others mismarked their cards or otherwise furnished erroneous information. Nevertheless, by actual count and interpolation, the university had something nearing a minority count of its students for the first time.

In a post-census review, a number of problems were raised. While HEW's ill-defined needs might be met by the results of the count, especially in view of its voluntary nature, the failure of more than 4,000 students to respond properly was clearly unacceptable if the information was to be truly useful. Methods had to be found to secure greater participation and to ensure accurate responses.

An additional area of concern which surfaced was the description of ethnic classification. While the term "black" has almost uniformly become an acceptable substitute for "Negro," ethnic sensitivities were being aroused by the imprecise "Spanish-surname" or "Spanish-American." Those of Mexican-American descent preferred "Chicano" and did not want to be confused with South Americans, Puerto Ricans or others of Spanish derivation. Thus, the 1970 census which showed 370 "Spanish-Americans" at MSU was greeted with justifiable skepticism by the vocal Chicano element as a true measure of their numbers on campus. (The count also was erroneous in that it inadvertently included some foreign students.)

Before a decision could be made on the designation issue it was necessary to start the next census, and basically the same census card was used for the 1971–72 school year. New freshmen were counted as usual during their summer 1971 orientation sessions, while the bulk of that year's 41,649 students again were requested to deposit their cards during the registration process in September. The results from the second census were more accurate: instead of the more than 10 percent deficiency of 1970, those who failed to properly complete or return a card in 1971 amounted to 1685, or about four percent.

While this marked improvement led some to believe that the margin of error was now statistically acceptable, and that we should formalize the minority count as it then stood, there still was reason for dissatisfaction. One glaring anomaly still remaining was the appearance of the 150 cards marked "American Indian." Although we dearly wished that this was an accurate count, it was quite obvious that an increase of 1500 percent in the number of Indian students had not occurred. (10 were counted in 1970.) According to Federal and most Tribal Council rules, a person may claim Indian status only if he or she has one-quarter Indian blood. Faced with this question in a follow-up telephone survey, those who continued to claim this category quickly dropped to 41.

Meanwhile, the 1685 students were analyzed further, their names matched against those cards filed by minority students in 1970. This picked up 38 additional minority students and weeded out a number of foreign students. At this point there were 1079 students of unknown status.

With an "unknown" factor of less than three percent, we now felt that we might have reached a statistically justifiable stopping place, if not actually a point of diminishing returns. Nevertheless, it was determined to make one last effort to achieve maximum possible accuracy. Like the last few feet up Everest, we had come too far not to try to reach the summit.

The final step was carried out by mailing a new computer card to the 1079 students whose ethnic identity was unknown, together with a low-key letter from the university's Office of Equal Opportunity Programs requesting their cooperation. This mailing produced 49 additional minority students, 318 "others" and weeded out a number of aliens or students who had withdrawn from school. Some 19 students made a special point of their refusal to answer, while 450 did not return the card.

Those who refused with emphasis returned cards marked with such additional categories as "Super Jew," "Texan," "50 Generation Hun!" or "female." One determined iconoclast not only mutilated and spindled his computer card; he stapled it as well.

Thus, when it was all over (nearly four months after registration), fewer than 500 persons had declined, for one reason or another, to participate in the census. This represented a "missing" element of less than 1.5 percent, a margin any professional poll taken would consider as close to Nirvana as possible. (The final minority count for those who have followed this chronicle thus far was 3024, of whom 41 described themselves as American Indians, 2509 black, 237 Oriental and 237 "Spanish American.")

In the spring of 1972, a small committee consisting of the MSU Office of Institutional Research and administrators representing various minority groups was formed to discuss plans for the 1972–73 census. After reviewing the improvised procedures which had gone into the 1971 count, the committee agreed on several changes which, hopefully, would lead to more orderly results the next time around.

Several alterations were made in the categories listed on the card. Caucasian students, who previously were lumped under "all other students" would now have their own category of "white." Those checking "American Indian" would be asked also to indicate their tribe. And in addition to "Spanish American," a new category of "Chicano" was provided which presumably would separate this group from Puerto Ricans and others of Spanish descent.

Furthermore, members of each racial or ethnic group represented in the census volunteered to staff the desks at registration where the census cards are deposited. It was believed their presence would help ease some students' apprehensions.

Finally, specific procedures were established for processing the returns. Now, if the "no response" element is under 500, the minority count is accepted unless there is some obvious irregularity. Should the number not responding be greater than 500, however, additional steps will be taken, including a follow-up mailing and the checking cards against the previous year's returns.

In retrospect, it is legitimate for one to harbor some doubts about the entire exercise. It is still distasteful to inquire into another person's racial or ethnic background—or religion, politics or any other essentially personal information—regardless of the worthiness of purpose. And was all the statistical effort worthwhile? While the validation shifted scores of students between categories, the net increase in the non-Indian minorities amounted to only 18 from the original, unevaluated report (a gain of 30 blacks, and a decrease of seven Orientals and five "Spanish Americans"). And what are the characteristics of the 450 "unknowns"? Are they mainly whites with a super sense of civil libertarianism, minorities with forebodings about the process, or just the slothful?

The need for basic statistical data in the equal opportunity area is likely to increase rather than recede during the next few years. And institutions of higher education must search for the best possible means of supplying accurate information for their own and external needs. Michigan State University intends to follow that course. At the moment, however, all we really know is that MSU had 3024 minority students last year—give or take a few hundred.

[Freedom at Issue, May–June 1974, No. 25]

THE GOVERNMENT'S SPUR TO GROUP RIGHTS

Comprehensive recommendations for countering the ethnic chauvinism of "affirmative action" and similar programs, by stressing fairness and merit as basic to the preservation of individual rights.

PUBLIC POLICIES AND THE RISE OF ETHNICITY: BASIC CONSIDERATIONS AND PRACTICAL SUGGESTIONS

(By Richard Gambino)

For as long as the life of humanity has been recorded, people have identified themselves by their membership in groups. Among the most frequent criteria for group definition have been common languages and religions, common cultural backgrounds and histories, and common physical and racial distinctions. In a phrase, ethnic characteristics. Probably no society in history has included more contrasts in its people than that of the United States. The forebears of citizens of this country migrated here from every direction, from almost every continent on the globe. The well known ideal of the melting pot, whatever its social significance, represented an effort to come to terms with, to encompass and cope with this cultural pluralism.

Although Americans have indeed achieved a common culture, it is one that is composed of ever continuing contributions from its diverse peoples. Just as Walt Whitman celebrated the United States one hundred years ago as a "teeming nation of nations," it remains today a giddy culture of cultures. Whether ethnic characteristics remained vital but submerged or unnoticed during the onslaught of the melting pot ideal, or whether they lapsed and are becoming revitalized, is a moot question. What is significant is that ethnicity is a powerful force on the American scene and is likely to remain forceful.

If the melting pot myth[1] is on the wane, two older beliefs are still very powerful. One is the myth of social and economic mobility based on individual merit. Second is a powerful ethic of "fairness." Any attempt to form policies for American society today must probe the probabilities and possibilities in three complex myths—ethnicity, merit and fairness. Not only should we investigate the future of each myth, but also the interrelations between the three.

ETHNICITY INTENSIFIES

Accustomed in the 1950's and before to thinking of our society as culturally homogeneous, or at least moving toward cultural homogeneity, we were startled at the intensity with which ethnicity began to be asserted in the middle 1960's. And in the 1970's, we are taking note of expressions of ethnic diversity in other societies which we had hitherto thought of as "monolithic." Thus, on July 31, 1972, the *New York Times* reported new affirmations of ethnic identities among the one hundred ethnic groups in the Soviet Union. More significantly, a major shift of official policy was reported. The Soviet government has for the past 50 years vigorously pressed a campaign to achieve a melted pot of Soviet culture, a cultural homogeneity rooted in "international" socialist ideology. In short, it tried to obliterate popular ethnic myths and to impose in their place an exclusive myth, using all of the formidable means of a totalitarian state in the effort.

Now, in evident recognition that the effort failed, the official policy of the Soviet government has turned to try to compromise with the forces of ethnicity rather than attempting to eradicate them. Speaking of the new policy, it was reported:

"Within the limits of its republic region or other autonomous area, each ethnic group was given the right to foster an education and culture in its own language, but under the over-all umbrella of a Communist ideology. In terms of a widespread slogan, ethnic cultural development became 'national in form and socialist in content.'"[2]

On the same day, a separate article reported a similar effort on the part of the government of China regarding the 54 major ethnic groups that constitute most of the nation's 750 million people. The Central Institute for Nationalities in Peking is attempting to cultivate, among carefully selected young leaders, *both* Maoist ideology and different ethnic identities.[3]

See footnotes at end of article.

We, too, need to balance divisive ethnic forces with the cohesive strength of a common culture. The myth of the melting pot was never a complete basis of our common culture. It was more a psychological superstructure than a cultural foundation, more a poorly defined goal than a reality.

On the other hand, the myths of fairness and meritocracy are fundamental to our culture and are clearly perceived. Their destruction would signal an acute social pathology. The very roots of the authority around which the majority of the American people center their lives, plans, and hopes would disintegrate. Without this strong center, centrifugal forces of ethnicity could cause American society to fly into fragments. Restoration of a common culture of any sort would be made very difficult. In the chaos, possibilities would inevitably become polarized between anarchy and totalitarianism.

Today, gigantic forces of social life create mass feelings of rootlessness, anonymity, impotence, and hence meaninglessness among people. Among the many paths to identity available to people to resolve their crises of meaning—for example, religion, political ideology, personal achievement—ethnicity is outstanding in several ways. First, it is immediately available. A person is already a member of one or more ethnic groups by birth and/or upbringing. Personal achievement, to cite another criterion of identity, is an uncertain and long-term affair. Second, events of recent history have demonstrated the effectiveness of ethnicity in providing identity at a time when other criteria, such as religion and political ideology, have proven to be of dubious reliability. Given the overwhelming need for identity, ethnicity has a powerful psychological appeal today, perhaps unmatched by any other criterion for defining meaningful life.

THE FORMS OF ETHNICITY

And yet "ethnicity" remains a vague, confusing, and sometimes controversial term. Each of its different meanings carries with it different possibilities for American society. For purposes of clearer understanding, let's distinguish between two types of ethnicity. It is useful and important to separate "tribalistic," "parochial," and "chauvinistic" ethnicity on the one hand from "creative" ethnicity on the other.[4]

Chauvinistic ethnicity involves the tendency to distinguish between "us" and "them." Grounds for distinguishing between members of "the tribe" or group and outsiders have been innumerable. They have included virtually every real or fictional criterion one could imagine, including religion, age, sex, class, interests, and cut of one's clothes or hair, etc. Throughout human existence, various ethnic attributes have often been used as defining characteristics of tribalism. Jonathan Swift satirized this tendency in his fictional description of the cleavage between "Big Enders" and their enemies, the "Small Enders," at war with each other because of an irreconcilable difference about which end of a soft-boiled egg should be opened at breakfast!

From initial division of humanity according to the criteria of ethnicity, *all other meanings follow* in the minds of ethnic tribalists. The very framework for all their thoughts, feelings and actions follows. We may say of them what George Orwell said, merely reading "ethnic group" where Orwell used "nation or other unit":

"I mean first of all the habit of assuming that human beings can be classified like insects and that whole blocks of millions or tens of millions of people can be confidently labelled "good" or "bad." But secondly—and this is much more important—I mean the habit of identifying oneself with a single nation or other unit, placing it beyond good and evil and recognizing no other duty than that of advancing its interest."[5]

Ethnic chauvinism provides a strong sense of identity and security. Moreover, seemingly it provides answers, or at least the directions for the solutions of problems. And it purports to provide a clear guide for all relations with those outside the ethnic group. But it is a sham identity, a false security and potentially disastrous guide for human relations. For ethnic chauvinism stifles the very growthful psychological characteristics needed for genuine identity, well grounded security and constructive relations. These include free and active intelligence, sensitivity to the tragic dimension of life (all is not clear cut), and positive appreciation and utilization of differences between people and groups.

Instead, ethic tribalists can be clannish, conformist, obstreperous, uncritical of themselves or their group, overwrought, pugnacious, prejudicially critical of those outside the group, paranoid and enormously energetic and determined. In short, they are potentially very destructive.

More creative, but still rooted, people on the other hand, use their ethnic backgrounds as points of departure for growth rather than as proof of their worth. By inquiry and reflection, each individual shapes his identity by building upon ethnic characteristics he judges to be valuable. In so doing, he gains insight by analogy into how the identities of other people are formed, and in the process learns how to appreciate their different inheritances. Educated ethnic awareness provides a substantial part of identity, energy and direction for many creative people. It cultivates in them respect for others, with possibilities of genuine communication and interchange of what may become valuable to all from each ethnic group. Thus, it is "creative" ethnicity, for one learns to live not only as a rooted person, but also to live beyond one's roots and to help shape the emerging synthesis of contributions coming from various ethnic groups.

What our future will be is considerably dependent on which way Americans turn, toward chauvinistic ethnicity or creative ethnicity. As a corollary, the direction of the turn will be influenced by the policies and actions of government and other institutions. However, we do not begin with a blank slate. The influences of the past are already operating, setting directions taken. Unfortunately, some events of the recent past have moved us in an undesirable direction. As the "revolution of rising expectations" of the 1960's became increasingly one of rising "non-negotiable" *demands by chauvinistic groups*, America entered a severe social crisis at the close of the decade.

One of the key causes of the reassertions of ethnicity was the civil rights movement. At first impelled by the 1954 school desegregation decision of the Supreme Court, the movement was a demand for equal rights for individuals. It sought to tear down the walls of racial segregation that impeded the enjoyment of equal rights. At this stage, the movement raised the ethnic consciousness of blacks, and raised both corresponding and responding awareness of their own ethnicities among various white groups. In the middle 1960's, however, a concurrent of forces moved the ethnic awareness toward chauvinistic ethnicities among many blacks and whites.

DAMAGING CLAIMS OF ETHNIC CHAUVINISTS

Although it did not cause the shift in direction, the slogan of "black power" stands as the clearest symbol of the movement from awareness of ethnicity to ethnocentric chauvinism. Since the middle 60's, the switch from concern with individual rights to alleged rights of ethnic groups has become pronounced. Large segments of various ethnic groups now think exclusively in terms of identity each with its own ethnic group, in Orwell's phrase, "placing it beyond good and evil and recognizing no other duty than that of advancing its interest." When challenged on the socially divisive results of this, chauvinists of various ethnic groups answer with one or more of the following responses:

1. "America was always divided. It has always been each group for itself." This response ignores the fact that the common culture myths of fairness and merit have until now had considerable vitality. Although less than complete, and denied to some groups of Americans, the myths have been operative. Responding to the limitations of the myths by wanting to scrap them altogether is an understandable result of the rage of "have nots." Understandable, yet ill considered. There is far more compelling logic to the response that seeks to increase *in fact* the effectiveness of the myths, and to extend them to cover all Americans.

2. Citing the constructive aspects of ethnicity. Those who do this are either confused themselves regarding the differences between chauvinistic and creative ethnicity, or are consciously manipulating and exploiting the confusion in the minds of others.

3. Asserting that chauvinistic ethnicity is a necessary, temporary step toward creative ethnicity. The dynamics of how one would lead to the other are explained, if at all, in terms of a dangerously inadequate understanding of the self-perpetuating natures of chauvinistic minds and groups.

These apologies are used to legitimize the violations of the moral myth of fairness so strong in the American mind. Double standards abound. Great sympathetic attention is given to the objective conditions determining social ills among favored ethnic groups. But social ills among other groups are dismissed without either sympathy or understanding, by use of epithets and hostile stances. Segregation practiced by non-favored groups is assailed. Segregation by favored groups is accepted. The use of legal sanctions against behavior abusive of basic individual rights is demanded only against others, but never regarded as legitimate against favored groups. These philosophically crude positions are now finding sophisticated, if not sophistical, arguments to support them. Attempts have begun to replace the myth of fairness by imposing other myths upon the American people. These vary in subtlety.

One of the least subtle attempts is found in Peter Schrag's *The Decline of the Wasp*. Ignoring that the melting pot myth was touted by people from all ethnic groups (and that the phrase "melting pot" was probably first used by a Jewish writer in 1907), Schrag portrays it as the product of an evil conspiracy by WASPs to rob other Americans of their souls. Gross stereotypes of WASPs (unfeeling robots) flow from Schrag's writing, perhaps intended as instruments in a deliberate effort to build a political force. At some points, his worst slurs seem to be the product of an intelligence totally distorted by rage. In the end, his book turns out to be merely another diatribe for tearing down the utterly evil "establishment." It is a scream familiar from the rhetoric of those who believe America is synonymous with an evil which is doomed to the trash heap of history. But Schrag's efforts culminate in an attempt to make the familiar polemics of the New Left and Counter-Culture synonymous with *ethnic* sensibilities of non-WASPs, and the evils of "bourgeois," "capitalist" America synonymous with another set of ethnic characteristics—those of WASPs. Political cant is disguised as ethnic chauvinism. The total distortion created in the effort represents a "big lie" technique of propaganda that would stagger even superior analysts like Orwell. A typical example of Schrag's reasoning involves an explanation of why at the trial of the Chicago Seven, Judge Hoffman punished Abbie Hoffman:

"(Judge) Hoffman's insecure establishmentarianism skirted overt anti-Semitism. He appeared deliberately to be trying to deny not only identification with the kids but his own Jewishness. They seemed, at times, to represent similar (or even identical) crimes. The link was hardly precise, yet it had symbolic validity in a society that had always made it difficult to be totally American and totally Jewish at the same time. Abbie Hoffman understood, "Your idea of justice is the only obscenity in this room," he shouted at the judge. "You schtunk. Vo den. Shanda fur de goyim." For insulting the judge in Yiddish (accusing him of shameful behavior on behalf—and in the eyes—of WASP's), six days."[6]

Using this tortured logic, one can hang any rap on WASPs or on any other group. But American sensibilities no longer tolerate such obvious ethnic hatred in print. Except when directed against the new scapegoat, the WASP. Not only is it open season on him, but if Schrag's book is an indication, there is a bounty on his head. Schrag would tribalize and politicize ethnic groups and have them at each other's throats.

More subtle, abstract attempts to destroy the common culture myths are offered in terms of theories of social philosophy. Thus, two favorable reviews have appeared by professors of philosophy of a recent tome on justice, one in the *New York Times*, the other in the *New York Review of Books*.[7] Both are very sympathetic to *A Theory of Justice*, by John Rawls. Rawls' theory of justice, which presumably is to replace the operating American myths of fairness and meritocracy, is composed of two essential elements. One is that justice is to be pursued by institutions on behalf of *groups* as well as individuals. Second, and more important, justice demands that institutions cultivate inequalities of wealth, authority and power when such inequalities work in favor of some group that is socially or otherwise disadvantaged. In short, institutional *unfairness* to individuals and/or groups is justified if it produces benefit to a favored group.

Rawls' thesis is being used to complement the position explained by Harold Cruse in his *Crisis of the Negro Intellectual*. Meritocracy, which has been the operating framework for other ethnic groups, it was explained, will not work for blacks. From this, the next step was to favor quotas or "positive discrimination" to permit blacks to break through racism and move upward more quickly than possible under meritocracy and fairness which demand that blacks learn the skills that enable them to compete with whites. It is a reversal of the traditional American system as explained, for example, in Richard M. Huber's *The American Idea of Success*. Until now, all ethnic groups have operated under the myth that status is gained, as Huber puts it, by "achievement rather than ascription." Now ascription rather than achievement is being pressed. Of course, the basis of ascription is not the old European class and caste system Huber writes about. The new basis for ascription is membership in a favored ethnic group.

ENTER THE "MOSAIC SOCIETY"

The pluralistic society that results from a coupling of ethnic chauvinisms and the abandonment of the ethic of fairness is a "mosaic society." This is an apt metaphor, for it connotes the static quality of such a society, each piece in the mosaic unmoving and isolated from the others. The mosaic aspect of our society has become increasingly evident. For example, on American campuses. Blacks and whites segregate themselves from each other in dormitories, cafeterias, extracurricular events, and college newspapers. Even the sitting together of blacks and whites in classes is mosaic, for there is little interchange between members of different races. In the words of a student, "Dianne Howell, a graduate student of psychology at the University of California at Berkeley, likened her white classmates to 'the wallpaper.' They're there. They are just there,' she said." [8]

At P.S. 108 in Manhattan the children (the majority of Puerto Rican background, the minority black) responded in singular fashion to the showing on television of the movie "West Side Story." The behavior of the children, as reported in a newspaper story, was conspicuously more ethnically chauvinistic, agitated and violent in the days following the film. The children identified with both ethnic gangs of the film (Italian and Puerto Rican), and were highly excited by the intergang violence. They imitated it both in play and in serious "acting out." According to the staff of the school, there was no evidence that the children either understood or were moved by the clear moral of the movie, a plea for inter-group tolerance and the renunciation of violence in intergroup behavior.

In my opinion, "this is where we are at." We are a society heavily into a static mosaic of isolated, even mutually hostile, ethnic and ideological blocs. It remains to enquire what, in light of this, should be the role of institutions, including governmental agencies, in the next decade.

The mosaic aspect of our society overlays all of the institutions that constitute what Peter Drucker, in an influential book, called the "new pluralism" of our society.[9] This pluralism is of types of large institutions. Each type is specialized in its basic functions and ultimate goals. Each exercises considerable influence on the whole society.

Accepting this part of Drucker's analysis as essentially correct, I offer two responses. One is that the very nature of the society described by him adds to the severity of people's feelings of social alienation, their yearning for personal wholeness and for meaningful identity. Therefore, insofar as American society is accurately depicted by Drucker, its character will make the psychological appeals of ethnicity even more attractive to large numbers of people in the next years.

Second, I must take issue with some of Drucker's conclusions that have been widely accepted in government, especially by career bureaucrats in federal, state and local agencies. These apply directly to the question of what should be the role of governmental agencies and other public and private institutions. Although they have remained unscrutinized, there is evidence that Drucker's ideas have been applied in a wide scale since the publication of his book in 1968. Moreover, the actual behavior of governmental agencies reflects Drucker's opinions at some key points. Government, according to Drucker, should "coordinate" the operations of society's institutions. It, and it alone, should make the key decisions about society as a whole, and move society's institutions in directions it has charted. Drucker is vague about how these basic decisions are to be made. To continue his metaphor that government should be a special institution among institutions, as he puts it the "conductor" that conducts an "orchestra" of society's institutions, one may ask, who writes the music? On this Drucker is both vague and ambiguous. At times he sounds like a latter day Rousseauean, raising anew the notoriously vague notion of the "common will":

"We need government as the central institution in the society of organizations. We need an organ that expresses the common will and the common vision and enables each organization to make its best contribution to society and citizen and yet to express common belief and common values." [10]

In other places, Drucker seems to suggest a theory of decisions by "consensus":

"The purpose of government is to make fundamental decisions, and make them effectively. The purpose of government is to focus the political energies of society.

It is to dramatize issues. It is to present fundamental choices. The purpose of government, in other words, is to govern."[11]

What *is* clear in Drucker's view is:

1. Government should make all key decisions.
2. Other institutions of society should be merely what he calls "doer" institutions, i.e., they should carry out the roles and policies set for them by government.

Drucker's views raise serious questions of political ethics and democratic theory that can be only cited here:

1. "General will" and consensus theories lead to *de facto* rule by the whimsies of whomever controls the instruments of power.
2. Government's exclusive prerogative to make decisions and "orchestrate" society is totalitarian. The obvious danger is one of a corporate society ruled by an all powerful state. Until now, the term applied to such a society has been "fascism."

In addition to these fundamental questions, other questions more operational in nature come to mind. There is no pluralism of decision-making in Drucker's scheme. This in a society where each institution is specialized. The people who best know an institution would be excluded from making decisions concerning its basic aims and functions! For example, the university, a "doer" institution, is merely to obey the commands of government agencies, even if academicians perceive those commands as destructive of the university's unique mission, the pursuit and dissemination of knowledge and ideas. In other words, the effective specialized functions of the doer institutions are ill served by Drucker's design.

One may also ask whether Drucker has too sanguine a view of social engineering. Indeed, in the two-page concluding chapter of his book, he admits that his thesis is flawed in that he has ignored all but "the social dimension of man." One may go further and charge that even within this dimension Drucker has ignored too much. He simply does not deal with many determinants of social life, for example, popular myths. In short, his model of society is *both* too mechanistic and too simplistic in its view of the dynamics of the social "machine."

GOVERNMENT VS. INDIVIDUAL RIGHTS?

We come to the question of what should be the role of governmental agencies, e.g., H.E.W. *What policies by these agencies and by other of society's institutions foster creative ethnicity, individual rights, a fluid pluralism of interrelations among groups, democratic decision making, and social and economic justice? What policies move society toward ethnic chauvinism, violation of individual rights, a static mosaic society of insulated groups, and internecine fighting in American society?* Human psychology being what it is, any actions which are not clearly and unequivocally perceived as moving toward the first scenario *ipso facto* help to create the second type of scenario. The issue is nowhere more critical than in the "affirmative action" policies of H.E.W. and other institutions. At present, the widespread public confusion surrounding these policies is fraught with dangers.

In the popular American myths of fairness and individual merit, institutions, and especially governmental institutions, are viewed as "referees" which see to it that the respective ethics of the two myths are not violated. When a governmental institution is perceived as itself violating the ethics, the effect on society is extremely disruptive and destructive. Several characteristics of affirmative action, *as they are perceived* by millions of Americans, are precisely so damaging. Again, as perceived by large groups of people, they are:

1. The assertion of "group rights," specifically rights of certain ethnic groups, over individual rights and the "rights" of other groups.
2. The assertion of ethnic membership over individual merit as a criterion of reward.
3. The assertion of "compensatory justice" on behalf of members of some groups over the rights and merits of individuals not of the groups.
4. Institutions, including H.E.W., becoming *partisans* of certain ethnic groups, thus violating fairness.
5. The capturing of the powers of institutions by groups using them for partisan purposes.
6. Provoking the determination to "strike back," to assert oneself and one's group against other groups and the institutions favoring them.

The realization that America is composed of a pluralism of ethnic groups is an old one. In this scheme, basic to the American mentality for a long time, government is viewed as the guarantor of the legal rights of individuals and as neutral regarding the relations between ethnic groups and their various expressions. The twentieth century has seen the rise of collectives, including ethnic groups. As collectives per se compete and clash with each other, the internal relations of our "nation of nations" have become increasingly like those of international rivalry. American society increasingly resembles international "society," a society composed of sovereign units where the lack of effective, fair international laws is sorely felt. Thus woes of fragmentation have beset the United States for some time. That these are felt by millions of Americans is reflected in a Synoptic View of American Public Opinion reprinted in a H.E.W. paper.[12] Of five "hopes" and "fears" surveyed over twelve years, the sharpest increase was seen in the fear of "national disunity" on the part of the American people, jumping 18 percentage points from 1964 to 1971, and 23 percentage points from 1959 to 1971.

As the nation is increasingly perceived as a collection of collectives competing with each other, it would seem essential that the traditional role of government be reaffirmed. Individual rights urgently need protection on a a field of collective movements, and the myth of fairness dictates that government and other institutions remain non-partisan in the competition between ethnic groups. The great civil rights emphases since 1954 attest to the interest to protect individual rights. Ironically, however, some of the more ill considered of these thrusts have weakened public confidence in government as nonpartisan, and at the very time when the more chauvinistic assertions of ethnic groups are becoming both multiplied and intensified.

The problem can be put simply. As the government is viewed, accurately or not, using its power-implementing ideas of "collective justice" on behalf of some *groups*, it is seen as unjust to those individuals not of the favored groups. And government is also viewed as a partisan group itself. Belief in the fairness of American society is undermined. In the cynicism that results, there is fertile ground for the growth of a new myth, a myth of a disjointed nation of chauvinistic groups, each following a "dog eat dog" ethic. The confusion surrounding the affirmative action programs of H.E.W. and other institutions has also fueled the drive toward ethnic chauvinisms itself. As people become convinced that membership in a favored ethnic group is given preference over individual merit, many respond by turning their efforts not on improving their qualifications and performance, but strengthening the power of their group so that it (and hence they) can survive and flourish in the war of tribes.

In addition, the trend has another socially destructive result. Although it is now unfashionable to say it, social and economic progress in the United States has been realized in large measure because of the efforts of its middle class, greatly outnumbering both the poor and rich combined. This is so because the energies of the poor are wasted, are not channelled into socially productive areas. Indeed, this is one of the outrages against the poor. And although much of the money of the rich is used in ways that contribute to socio-economic growth, their personal energies have been largely deflected into pleasure seeking and other individual pursuits which produce comparatively little or no social gain. It is the desire for upward mobility on the part of the large middle class that is the yeast of America's social and economic growth, without which the resources or "dough" of society (no pun intended) would not rise. This desire for upward mobility depends upon faith in the myths of reward for individual merit and fairness exercised by social institutions, especially public ones.

Actions by government that subvert belief in these myths in favor of reward according to ethnic membership vitiate the socially productive energies both of those not in favored groups, and of those who are condescendingly favored. For some time now, it has been widely believed by members of all ethnic groups in all strata of our society that the term "an equal opportunity employer" is a code phrase meaning that members of favored minority groups and women will be given preference over qualified individuals not of these groups. It is widely accepted that this is the result largely of pressure from governmental agencies like H.E.W. which have devoted their power not only on behalf of individual rights, but also given in to pressure to support chauvinistic ethnic aggressiveness. Hence, H.E.W. and other institutions are seen as unjust partisans threatening the rights of individuals and the effectiveness of pressured organizations.

Two examples. In the academic world, where the job market is now very tight and competition for positions intense, it is widely believed that the affirmative action policies of H.E.W. place qualified members of nonfavored groups at a disadvantage and thus lead to the hiring and promotion of the less qualified, subverting the quality of the universities' unique roles of education and research. Regardless of the extent to which "reverse discrimination" is in fact operative, a moot issue, the *belief* that it prevails has the same corrosive effect as the fact. Only a few recruitment letters from university departments expressing partial or absolute preference for women and members of specific ethnic groups are sufficiently destructive. And more than a few such letters have surfaced, some directly attributing the preference to pressure from H.E.W.

For example, a recruitment letter from a department at Claremont Men's College (California) states, "We desire to appoint a Black or Chicano, preferably female." (Incidentally, the device of hiring female members of minority groups satisfied pressures from two directions. One person now "represents" both categories of people. The ultimate conclusion of this trend merely demeans people. Individuals are quite plainly reduced to tokens.) From Northwestern University (Illinois): "We are looking for female economists and members of minority groups." From Sacramento State College (California): "Sacramento State College is currently engaged in an Affirmative Action Program, the goal of which is to recruit, lure and promote ethnic and women candidates until they comprise the same proportion of our faculty as they do of the general population." From Indiana University: "Preference will be given to women and minority group candidates in filling this position if candidates of equal quality are identified." From Connecticut College to a male applicant:

"It is quite true that we have an opening here and that I have examined your dossier. It is very impressive indeed, and I wish I could invite you to come for an interview. At present, however, the department is interested in the appointment of a woman so we are concentrating on interviews of this kind."

From New Mexico State University:

"Your prompt response to my letter with four candidates all of whom seem qualified for our vacancy, is greatly appreciated. Since this is no indication that any of them belongs to one of the minority groups listed, I will be unable to contact them at present."

From Washington State University: "women or members of minority groups." From Stanford University (California): "The Provost of Stanford has asked our Department to make a special effort to assemble a roster of Chicanos . . ." From the University of California at Berkeley: "outstanding candidates of minority background (Chicanos, Blacks, Women (sic))."

In the area of trade unionism, affirmative action is felt as an unjust threat by members of those ethnic groups nearest to the lowest rung of the socio-economic ladder. It is they who must compete with the favored minorities and who suffer reverse discrimination. We should remember that many trade unions became ethnically homogeneous for two reasons. One was the necessity of foreign language speaking immigrant workmen to survive at a time when labor unions were underdogs in a hard and often vicious struggle. Because of the ready usefulness of ethnicity, in this case involving common language as well as other cultural characteristics, many unions or union locals were organized as ethnic organizations. To cite but one of many examples, Local 89 of the Garment Workers Union was organized by Italian workers. Workingmen needed unions, and ethnicity served as one of the most useful criteria of organization. Thus, in New York City's public employment, the sanitation workers union was organized as an Italian union, teachers organized a Jewish union, and the police association was Irish. In private employment, Italian populated construction unions, the Irish were synonymous with transportation workers, and the garment industry was unionized by the Jews and Italians who worked in it. Similar ethnic identities marked the organization of the labor movement in the rest of the United States. For example, the steelworkers' unions of the mid-West were organized by Poles, Slovaks, Croats and Magyars.

Since their origins, ethnic unions have frequently sought to exclude members of different ethnic groups. This has been so for three reasons. First, the natural desire to work and associate with those of similar background and culture. As has been emphasized, ethnicity has always been in the warp and woof of identity among all people. Second, ethnic tribalism has sometimes operated. In these situations, outsiders were excluded not only because they were different but also because they were regarded as inferior. Third, outsiders were excluded in response to an anti-labor tactic once widely used by employers. The tactic was to divide and conquer the workers on the basic of ethnicity. Employers set ethnic group against ethnic group. The fears and hatreds between ethnic groups were cynically inflamed. In *Toil and Trouble*, a history of the labor movement, Thomas R. Brooks marks the effectiveness of this divisive tactic against the fledgling labor movement, turning ethnicity toward panicky, threatened ethnic tribalism:

"Needless to say, each group protected its own as it organized its trade. The process—and resutls—were markedly different in industry where employers followed a deliberate policy of pitting one immigrant group against another as a means of forestalling unionization.

"In a report made by John R. Commons following a visit to a large Chicago packing company in 1904, he notes that he "saw seated around the benches of the company's employment office a sturdy group of Nordics. I asked the employment agent, 'how comes it you are employing only Swedes?' He answered, 'Well you see, it is only for this week. Last week we employed Slovaks. We change about the different nationalities and languages. It prevents them from getting together. We have the thing systematized. We have a luncheon each week of the employment managers of the large firms of the Chicago district. There we discuss our problems and exchange information. We have a number of men in the field who keep us informed. . . . If agitators are coming or expected and there is considerable unrest among the labor population, we raise the wages all around . . . It is wonderful to watch the effect. The unrest stops and the agitators leave. Then when things quiet down we reduce the wages to where they were.' " His deliberate policy is one reason that unions failed to secure an early foothold in industrial plants. Among the skilled trades, ethnic lines reinforced craft solidarity. But among the unskilled in factories, worker solidarity was defeated by the babel of tongues." [13]

Thus the paradox. Ethnic homogeneity was reinforced in the labor movement *both* because of its success as a tactic of skilled labor, and its impact as a union busting tactic by employers. In short, ethnicity and much of the early labor movement were inseparable. Today, the historic ethnic parochialism of trade unionism is exaggerated as members of large white ethnic minorities (Irish, Italian, Poles, etc.) fear that they are, or may be, discriminated against in favor of non-whites. The violation of the myths of fairness and merit is perceived by ethnic white workers as a continuity, running from the practices of the old employers to the new affirmative action practices. In the academic world, a parallel is found. Jews, WASPs, and white males fear getting the short end of ethnic and sex discrimination exercised by universities under pressure from H.E.W. Unfortunately, neither H.E.W. nor other affirmative action proponents have demonstrated appreciation of these complexities and nuances in intergroup relationships. Like the news media, they have been sensitive only to one facet of the complicated history of ethnic relationships—racism. Their single-minded myopia has convinced white ethnics that their legitimate needs, problems and rights are not understood or respected. As a matter of fact, little hard data about these individual groups has even been collected. In government studies, they are usually lumped together as "whites" or "others"—and ignored. The attempts of members of these groups to protect or even explain their rights and needs are immediately countered with loud, glib cries of "racism" and "sexism." Instead of producing confusion and guilt among white ethnics, the dominant pattern until recently, this simplistic shrillness now is meeting a counter-response of white ethnic assertiveness and even tribalism. The miasma surrounding affirmative action is dense. Within the brief limits of this article, major points can only be illuminated. As they emerge in the context of the discussion so far, recommendations become possible.

SOME RECOMMENDATIONS—THE APPROACH

1. The confusion over whether "affirmative action" means the imposition of quotas is widespread. Quotas, by any name, for example "goals" or "timetables" are unjust and destructive.

2. The selection of favored groups, called "protected classes" by H.E.W., raises complicated questions. Who decides which groups are to be favored and by what criteria? Choices inevitably will involve injustices. For example, is the son of a rich and influential black family to be favored? Are black men to be favored

over Italian-American men in admissions to graduate school in light of the finding of Glazer and Moynihan that in the New York area the percentage of black men working as professionals is actually higher than the percentage of Italian-American male professionals?[14] In short, any selection of favored ethnic groups is bound to violate fairness and merit. In addition, the policy of favoring groups is an open invitation to groups to struggle to gain the levers of power and declare themselves or their allies "favored." In this struggle, the most energetic, chauvinistic, and/or politically savvy groups are best equipped to win to their side the adversary efforts of government and other institutions. These groups are not necessarily those suffering discrimination, nor are those who lose in the struggle necessarily free from discrimination.

3. The use of statistical data *alone* does not prove or disprove discrimination. Present affirmative action policies rely too heavily on simplistic use of such data.

4. Compensatory justice is valid only as applied to individuals, not to groups. If a qualified individual has been discriminated against in the past, and thereby refused a job, he or she is entitled to compensation, entitled to be first hired by the offending employer. Compensatory justice applied to groups, however, leads to absurdities of infinite regression. As the selection from Brooks' book on the history of the labor movement indicates, it would be hard to find someone not a member of a group whose members have not been discriminated against at some time somewhere in the United States. Second, its application operates as an injustice against individuals discriminated against in favor of a member of a favored group.

5. The establishment of favored ethnic groups distorts the processes by which society chooses which cultural contributions by which groups are to be accepted by the whole, thus operating against the chances that those that are genuinely valuable or useful will prevail.

6. The argument that discriminatory affirmative action is a temporary, necessary cure is spurious. For in addition to establishing precedents and entrenching practices, it also has the other undesirable effects cited in this article and these also are long-lasting.

7. The policy of applying the sanction of "pre-awarded compliance review" of financial aid and contracts against institutions is in effect a demand to prove innocence. This demand is not only morally unjust, but is also logically absurd. Powerful governmental agencies like H.E.W. should take the lead in reversing the drift of American society since the middle 1960's toward ethnic chauvinisms and move it in the direction of creative ethnicity while preserving the essential values of fairness and merit. *This can be done by a clear and unequivocal announcement that "affirmative action" means programs designed to equip disadvantaged individuals to compete on the basis of competence in a social arena where fairness will be guaranteed by government vigilance for the protection of individual rights. Emphasis of energies and resources should be shifted toward the creation of imaginative and effective programs of this type,* coupled with clear renunciation of all practices which are signs of discriminatory affirmative action. Recommendations can be listed under three headings. First, those relating to all social policies—general guides. Second, recommendations which will also meet the special circumstances of the academic world. And third, recommendations covering the particular conditions of trade unionism.

GENERAL RECOMMENDATIONS

1. Special programs to recruit and qualify members of all ethnic groups. The goals here are widened opportunity to access to jobs for individuals who are qualified, and special training and educational efforts to increase the pool of those who are qualified. There should be a switch in affirmative action from the categories of ethnicity to that of opportunity for all who are in need. No ethnic group has a monopoly on poverty, need or ambition. Widened opportunity to compete on the basis of merit is the goal where job or professional qualifications are relevant. Widened opportunity *to be selected by lot* (by the neutral laws of chance) when there is a surplus among the qualified, or a surplus when no special qualifications are germane. Chance should be permitted to determine the result instead of the guideline of the Office of Civil Rights of H.E.W. covering colleges and universities that women and minority applicants "must be recruited, hired and promoted over all competitors where their qualifications are the same."

2. Vigorous enforcement of the 1964 Civil Rights Act and all prior and subse-

quent legislation against racial, ethnic, religious and sex discrimination. Here, specific cases of discrimination would be pursued. The effect of vigorous enforcement would not only punish offenders but also deter others from practicing discrimination. Thus, the cause of equality is twice served.

3. **Statistical data should be used according to mathematically correct rules for meaningful interpretation.** One of these rules is that statistics alone are no conclusive proof of anything. At best, data can give a *prima facie* picture. Conclusive proof of discrimination requires that evidence independent of mere statistical data be presented. The other rules of statistcial use are complicated, but easily available through the many statisticians employed by government agencies and other large institutions. Among them are the stipulation that all significant characteristics be included in a study and assigned appropriate statistical weight; that the statistical samples used be large enough to have mathematical significance; and that there be homogeneity among the statistical examples in terms of significant characteristics. Each of these major rules has been repeatedly ignored in the use of data purportedly establishing discriminatory practices. The logical and moral burdens of proof are on those making an accusation, and not on the accused as the Guidelines would have it with its statement, "the premise of the affirmative action concept of the Executive Order is that systemic and institutional forms of exclusion, inattention and purposeful discrimination in employment have existed." Such a premise says nothing about any *specific employer*. To use it as a blanket *a priori* condemnation requiring a proof of innocence on the part o fan employer is a logical non-sequitor and a moral injustice.

4. A cessation of classification of favored groups by institutional fiat. Which individuals belonging to what groups and under what circumstances are discriminated against should be objectively determined according to the rules listed under #2 and #3.

5. The complete, unequivocal renunciation of all attempts to impose ethnic or sex quotas, however they be euphemistically labelled.

6. Government neutrality regarding the efforts of organized ethnic groups. These should be purely private and voluntary associations, and government should not use its power on their behalf. This involves a clear and unambiguous commitment on the part of government institutions to enforce not "group rights" but only the legal rights of individuals of all groups. Indeed, preferential hiring is quite clearly *illegal* under Section 703 of Title VII of the Civil Rights Act of 1964 which states:

"Nothing contained in this title shall be entitled to require any employer . . . to grant preferential treatment to any individual or to any group because of the race, color, sex or national origin of such individual or group on account of an imbalance which may exist with respect to the total number of percentage of persons of any race, color, religion, sex or national origin employed by any employer . . . in comparison with the total number of percentage of persons of such race, color, religion, sex or national origin in any community, State, section or other area or in the available work force of any community, State, section or other area."

FOR COLLEGES AND UNIVERSITIES

In addition to these recommendations, others should also be followed specifically in regard to colleges and universities.

1. Colleges should be persuaded to give maximum publicity to all job openings, tenure and promotion opportunities, and full disclosure of all information involving all decisions made regarding these questions, including full disclosure of the qualifications of those accepted. Any aggrieved individuals would thus have the information necessary to initiate corrective action. Neither the confidentiality nor privileges of departmental personnel committees or of deans and presidents should be permitted to hide cases either of discrimination or reverse discrimination. Colleges should be compelled to honor the merit system by vigorous scrutinization of their practices and punishment for any lapses. The long-established "old boy" discriminatory system and the newly established "preferential treatment" discrimination should *both* be combatted on behalf of the merit system.

2. The recognition that colleges recruit from a nationwide pool, and careful interpretation of statistical data. For example, the great majority of college personnel decisions are made by individual departments. Most of these are too small (less than 50) to draw conclusive statistical results without considerable

statistically independent evidence. In enforcement of anti-discrimination policies, the stress should be upon good faith efforts by the employing departments *to hire the best qualified without ethnic or sex discrimination.*

3. Enlargement of programs recruiting college and graduate students and meeting their special needs (educational, social, financial) so that they have a fair opportunity to become qualified for college teaching (and for other professions and occupations).

REGARDING LABOR UNIONS

I wish to make four recommendations regarding labor unions.

1. *Opening apprenticeship programs.* For many years, craft unions have required that admission be based on successful completion of apprenticeship training programs. These have varied in length from a few months to as long as six years. These programs are designed to meet two needs. First, to assure a supply of fully trained labor. Second, to control the numbers of trained workers entering a particular field. This second purpose is firmly grounded in bitter memories of past unemployment which wrecked many a union, with disastrous results for all workers in the trade. Affirmative action efforts at first were aimed at winning admission to apprenticeship programs for selected minorities. Openings for these programs should be widely publicized. Then applicants should be selected by lot in a supervised process. Each person desiring entry would then have a chance mathematically equal to that of every other applicant. This guarantees complete fairness for all individuals, avoiding discrimination and reverse discrimination. The recent attempts to by-pass apprenticeship programs, exercised on behalf of favored groups, should cease. In addition to all of the objections raised in this essay, such efforts create hazardous conditions for workers and passersby that result from having incompetents on the job.

2. *Opening de facto closed unions.* Some craft unions use techniques favoring the admission only of relatives of members. Obviously, this tends to preserve the ethnic status quo within these unions. This closed union device is illegal under the Taft-Hartley Act, but like the illegal closed shop it persists in actual practice because of sub rosa agreements between union and employers. The closed unions should be opened by vigorous enforcement of the Taft-Hartley Act. This can be done through close government observation of practices in the field and swift prosecutions of cases of vilations.

3. *Opening union leadership.* Union leaders tend to perpetuate themselves in office. This is so even when the ethnic composition of membership has changed dramatically. For example, in New York City, garment workers have shifted from a Jewish and Italian membership toward a black and Puerto Rican membership. But the leadership does not reflect this change. Similarly, in the Fire and Police Departments, and in transportation, the once solidly Irish memberships now have large proportions of Italians and a growing number of blacks and Puerto Ricans. But the leadership of the unions remain Irish. Of course the assertion that the ethnic composition of a union *must* be reflected in a corresponding ethnic leadership violates meritocracy. I do not advocate this position, but address the question of entrenched union leaders *per se*. The remedy here calls for close government scrutiny of union elections under existing laws, a remedy government have been loath to employ for fear of "labor troubles."

4. *Opening a fifty percent alternative to seniority.* Seniority is the most troublesome issue in the labor union area. Seniority systems require laying off the latest arrivals first. They also require all rehiring on the basis of length of service. Thus, newcomers are last hired, first fired. In addition, in those industries where seniority affects promotion, those who lack seniority because hired late as a result of past discrimination are not promoted. This perpetuates the *original* discrimination against these individuals. A remedy would require bypassing seniority requirements for fifty percent of all firings, hiring and promotions. Thus, those who have seniority (and who are individually innocent of past discrination) continue to have some protection. And those who are newcomers have a chance "to get where they should have been." Because none of the newcomers are guilty of any past discrimination, the 50% rule would apply to *all* of them. Those to benefit from it should be chosen by lot, as should those whose accumulation of seniority is to be waived. This compromise is necessary because questions of individual rights are mixed regarding seniority as they are not in other questions.

Government policies, and those of large private institutions, tend to concentrate on short term results at the expense of long term considerations. This is so not only because these institutions are highly vulnerable to political pressures, but also because most of the social scientists they employ are trained to work only with quantitave models of analysis. These are blind to different value priorities of data. Such values can only be assigned by informed, sensitive social thinkers. It is time to restore public policy planning to a high level of vision and a more sophisticated field of perspective. Such perspective should keep the critical myths of fairness and merit in the forefront. Large-scale educational efforts should be initiated regarding the differences between chauvinistic ehnocentricism and creative ethnicity. Finally, imaginative programs advancnig the latter need formulation and support by public and private institutions across our society. America needs not merely to change, but correctly to mature.

FOOTNOTES

---

[1] Among the most significant determinants of behavior are myths held and acted upon. A rich myth is rooted in reality, but transcends it in an outreach toward an idea or ideal. The energies expended by people in the outreach define the values they esteem. To the consternation of "social engineers" pressing for ever more effective social management, myths are born, grow, die and replace each other in a complex process that is highly nonrational, and hence not amenable to predictions or control. In short, it is very difficult deliberately to invent a myth and get people to believe in it. And it is equally hard to stamp out a myth which enjoys credence among large numbers of people.

THE RETURN OF RACIAL QUOTAS

Competition for jobs on the basis of ability is being eliminated not only in the schools but also in most of the job markets. This sweeping change is being brought about mainly by Executive Orders No. 4 and 11246, which were signed by President Johnson to eliminate discrimination in hiring, but which were revised and issued by the Department of Labor, and which now force institutions to give preferential treatment to minorities in hiring and promotion practices and require that goals and timetables be filed annually by each employer. The Orders cover public schools, universities, civil service (policemen, firemen, post office workers, etc.), the armed forces, construction and trade industries, unions, private corporations and businesses employing more than 50 people; and *all* organizations that have contracts with government or are regulated by one of the governmental agencies—in total, affecting about 95 percent of the employment market.

According to the U.S. Commission on Civil Rights (1970) report, the federal government is the largest employer in the country and another third of the nation's labor force is employed by companies that are government contractors. These two powers, the power to employ directly and the power to force federal contractors to abide by the rules of the government, alone affect more than 75 percent of the job force. Title VII of the Civil Rights Act of 1964 reaches almost all the rest of the employers; the title asserts that no person may be discriminated against on the grounds of race, color, or national origin. The meaning of nondiscrimination, however, has been transformed into affirmative-action compliance and reverse discrimination. Almost every school district, hospital, local government agency, bank—almost every institution we can think of—receives some federal assistance and/or is covered by this regulation. The list of organizations covered by Title VII is endless, and these employers also must follow federal guidelines. Furthermore, quite independent of any executive order that stresses preferential treatment of minorities, and quite independent of Title VII of the Civil Rights Act, the federal government has enormous powers vested in insured and guaranteed loan programs, such as home mortgages, student scholarships and stipends, institutional contributions to social security, and those of the Veterans Administration. And finally, the government has tremendous power in such agencies as the ICC, EPC, FCC, CAB, SEC, and FTC, which regulate railroads, ship building and operating, securities, marketing, communications, and many other industries. All of the businesses in these regulated industries, according to Glazer (1971), feel obligated to give preferential treatment to minorities. Preferential treatment is also required by all businesses with more than 50 employees, enforced by governmental agencies in Washington and on a regional basis. The obligation to give preference to minorities is felt more intensely by all businesses and institutions with more than 100 employees, because they must file annual reports with the Equal Employment Opportunity Commission (EEOC), detailing the number of minorities in all job categories, from laborers to administrators.

According to the federal guidelines, the goal of equal opportunity is no longer equality for all groups but is, as the report by the U.S. Commission on Civil Rights (1970) states, that the number of members of minority groups found in employment, at every level, be equal to their proportion in the population. In other words, *equal opportunity* has become transformed into *actual employment* of minorities. These minorities include blacks, persons with Spanish surnames, Indians, Orientals, and women—but not Greeks, Poles, Italians, Irish and other ethnics, not Catholics or Jews. Thus the only eligibles for preferential treatment are racial minorities and women, supposedly because they have suffered the most discrimination and disadvantage because of sex and heredity. Needless to say, they are not the only ones who have been discriminated against in some way. Other groups, and certainly individuals in those other groups, have suffered disadvantages in school and society. To be sure, no one asks how we know that some black person did not come from a home more advantaged than that of some white person seeking the same job or trying to get into college. Remember, about 70 percent of the poor in this country are white. Thus Seabury (1972*a*) cites the frustrations of one poor white student.

"The ability to think in the abstract is hard for a person with my cultural background and economic background. My parents' . . . income barely exceeded the poverty level. My father is a Southern Baptist with a third-grade education. . . . I believe I am a victim. As a non-member of a minority group I feel that I . . . [am] discriminated against constantly. The same admissions standards are not applied because a certain percentage of minority students must be admitted in each class regardless of their qualifications. My test score, undergraduate record, and my family (poor white) deny me admittance to Harvard because I am white."

The federal guidelines, according to Abrams (1972) and Seligman (1973), appear to be designed to scare employers away from any objective standards or test requirements which have a differential impact on minority groups. Moreover, the U.S. Supreme Court has ruled in *Griggs* v. *Duke Power* (1971) that tests can no longer be considered a reasonable job requirement; all arbitrary barriers to employment which demand certain skills, education levels, or test score results and have the effect of employing minorities in less than their proportion to the population are now considered illegal. The employer must now demonstrate conclusively that the skills are in fact needed for the job. If test scores are involved, he must now demonstrate that the tests are reliable and a valid predictor of job success. The fact that the employer has no discriminatory intention is irrelevant; it is only the effect that matters now.

The claim is that the tests are unfair and culturally biased because all groups do not obtain the same mean scores or pass the tests in the proportion that they represent of the general population. Ironically, the critics claim that blacks and other racial minorities are not getting an education as good as that of whites. When they apply to a college or go out into the job market, the blame for failure to qualify is no longer to be put on their schools and teachers but is now to be put on the tests. Suddenly, the words "unfair" and "biased" are used to alibi the inability of some groups to compete with others, ignoring educational abilities and differences in reading, mathematical, and aptitude scores even when educational levels are held constant. The claim is that standardized tests cannot be used, that we must either apply different standards to nonwhites who cannot compete with whites or eliminate standards altogether. (Some critics, according to Kurtz [1972], even contend that all testing should be eliminated and we should use lotteries to choose plumbers, teachers, lawyers, and physicians.)

Here it is important to note that females are considered as minorities in affirmative-action policies, but they have always been able to compete with males on standardized tests. The *Griggs* decision is not aimed at helping white women but is directed toward helping those racial minorities (except Orientals, who are high-achievers) who seem unable to compete on cognitive tests. All federal agencies involved in affirmative-action programs, such as the Office of Civil Rights (OCR), Equal Employment Opportunity Commission (EEOC), and Office of Federal Contract Compliance (OFCC), are rigorously enforcing this legal decision. This of course puts the employer on the defensive, and the easiest thing to do is just hire enough minorities to fill a quota.

According to Doppelt and Bennett (1967) of the Psychological Corporation, the cry that testing for job applicants is biased is a smoke screen to mask the political nuances. Granted, there are some technical limitations to tests, but there are many well-devised (reliable and valid) tests that measure "the individual's present capability of demonstrating his skills or knowledge for predicting job success." It is senseless to eliminate verbal and simple mathematical items on tests, or to exclude the tests altogether, when verbal communication and the ability to perform simple mathematical activities are important for a given job. The tests may be culturally oriented, but the job is embedded in a cultural milieu. The ability to "understand oral and perhaps written instructions" are not racially biased items; they are "culturally laden" items which are likely to be criterion or job-related. The purpose of the test is to select people who will succeed on the job; outlawing such tests makes the selection process more subjective and political than without the tests. The politics of the charge, that tests are racially biased, is evidenced by the fact that it does not consider a large subgroup of the white majority who are educationally disadvantaged and do not perform well on many of these job tests. The authors conclude:

"Whenever the number of applicants exceeds the number of job openings, some applicants will be rejected. This is one of the hard facts of life. It is not surprising that those who are rejected sometimes attack the selection procedures on the grounds that these are invalid or unfair. Although testing is not free from defect or beyond criticism, appropriately chosen and properly administered ability tests are superior to most available alternatives.

"Some of the problems which stem from the testing of disadvantaged groups are of a technical nature and are not related to the issue of discrimination. Reduced reliability is often due to the fact that score distributions obtained from disadvantaged groups are compressed. The same compression (and reduced reliability) is also found when only highly capable individuals are being tested. These problems require technical study and, in some instances, may call for the use of different measures or the development of new and more appropriate tests. The basic issue is not necessarily one of discrimination against a particular subgroup."

Society has the responsibility for providing jobs for people with limited skills, but not at the expense of replacing qualified personnel with unqualified personnel. Society has the responsibility of providing remedial job instruction for disadvantaged populations, but this also should include white disadvantaged populations. The rejection of such measurements that register the consequences of educational deprivation is merely a political move to kill off the messenger who brings the bad news, to deemphasize the harsh fact that quotas will lead to a downhill trend in quality and abilities of people employed in many jobs. New and artificial standards that mock excellence and replace it with mediocrity have little to do with equal opportunity. The moral and ethical arguments are secondary; rather the political decision to pay off militant blacks to curtail violent tactics seems to be the major factor. Indeed, the silent majority must now pay the consequences for being silent.

The fact that a company or institution does not want to hire a member of a minority group because of his character or even because of previous arrests cannot be deemed as an excuse for not hiring him. (Such an excuse often is illegally used for not hiring a white person). In *Gregory* v. *Litton Systems* (1971) the federal district court in California ruled that an applicant with a record of 14 arrests and no convictions could not be denied a job on that basis alone. The plaintiff was black, and the plea of racial discrimination was successfully used against the company. The court ruled that arrests alone prove nothing about individual character and that, since a greater proportion of blacks are arrested, it is discriminatory to use this excuse for not hiring them. Abrams (1972) points out that in the new interpretation of Title VII, the federal government has gone a step further and has declared it is now "unlawful to discharge or refuse to employ a minority group person [notice that only minorities are mentioned and minorities in this case does not include white women] because of a conviction record unless the particular circumstances of each case indicate that employment of that particular person for a particular job is manifestly inconsistent with the safe and efficient operation of that job." Although members of the EEOC admit that a bank robber should be barred from employment in a bank, they argue that a person who is convicted of rape or murder "may be hired, since the act is not job-related".

Seligram (1973) points out that, although government officials continue to profess that "you never have to hire an unqualified person," the real point is that in all job sectors the pressure to file timetables and goals, even though actual quotas may not be intended by the federal government, turns the whole procedure of preferential treatment toward one of racial quotas and reverse discrimination.

The advocates of preferential treatment of minorities refuse to admit that they have created hysteria in all job sectors, with the result that, rather than risk legal or financial problems with the government, almost all employers have overreacted and instituted quotas and reverse-discriminatory practices. Thus, Seligman (1973) also points out that major companies like IBM and Xerox have informed their executives that their futures depend on results in meeting affirmative-action goals. This type of hysteria is increasing as more and more large businesses are probed for alleged biases in recruitment and promotions (*Chicago Daily News*, September 18, 1973; *New York Times*, September 23, 1973). The threat of court action, compounded by possible loss of federal contracts, is sufficient to cause overreaction on the part of these industries and to negotiate a settlement with EEOC. According to the *Chicago Tribune* (September 20, 1973) and the *New York Times* (September 23, 1973), a growing segment of the black civil rights groups openly use the term "quota system" and demand that it be implemented "to correspond with the size of the black population." Failure to adopt a quota system will lead to black boycott of goods, black demonstrations and picketing of the businesses, as well as lawsuits.

Similarly, Seabury (1972*a*) finds that quotas are widespread in colleges and universities, which he lists by name, and that such quotas represent "a stark remodeling of their criteria of professionalism and their standard of excellence." And, the president of Columbia University, William J. McGill, states that "the determination of superior ability and special excellence [is now viewed by] some officials as a mask for continuing discrimination" (*New York Times*, May 7, 1972, p. 12).

Preferential treatment is so common that many chairmen, deans, presidents, and professors who head search committees blatantly indicate (even in writing) to candidates and placement bureaus that they are interested in hiring only minorities, and females, and especially minority females. Among the schools that have expressed such preferences in accordance with current affirmative-action policies are: City University of New York, Columbia University, Connecticut College, Indiana University, Lehigh University, New Mexico State University, Northwestern University, Sacramento State College, San Francisco State College, Stanford University, State University of New York at Albany, and the University of California, Berkeley.[1] These are but a few of the colleges and universities that give such preferential treatment. Many clearly state that their new hiring "goals" are based on recruiting minorities in proportion to the surrounding population. The prestigious institutions, where hiring and promotion standards tend to have been rigorous in the past, and the state and city-supported institutions and those receiving federal funds, are under the most pressure.

For example, the department head of a southwestern university responded to the inquiry of the placement officer at another university on May 27, 1971, by stating that although "four candidates seem qualified for [a] vacancy they cannot be considered" because he had been instructed to make every effort to recruit "a qualified person from a minority group." He pointed out that his recruiting policies had changed and he could no longer "seek the best-qualified person available, regardless of race, color, or creed, as [the university had] in the past."

---

[1] Almost every, if not all, college and university has an affirmative-action plan. These institutions are mentioned only because I managed to obtain xeroxed copies of such letters.

In other words, this department head is forced to seek a "qualifiable" minority person, not the most qualified person. Another chairman at a west coast state school wrote to placement bureaus across the country on April 24, 1972 stating that the new goal of his school is "to recruit and promote minority and women candidates until [their] proportion of [the] faculty is [the same as that of] the general population." A department chairman of an Eastern college compliments a person's "impressive" research and states "I wish I could invite you to come for an interview," but informs the candidate that affirmative action makes it impossible to do so. He reassures the person that with his "excellent qualifications [he] will find a position of [his] choice." [3]

In the same vein, the *Congressional Record* (May 22, 1973) points out that letters are now even posted on bulletin boards and read:

"The Department of Philosophy at the University of ——— is seeking qualified women and minority candidates for all faculty positions at all levels . . .

"We desire to appoint a black or Chicano, preferably female . . .

"State College is also an affirmative-action institution with respect to both American minority groups and women. Our doctoral requirements for faculty will be waived for candidates who qualify under the affirmative-action criteria."

Letters between departments now read: "College has a vacancy in its . . . Department. . . . We desire to appoint a black or Chicano, preferably female.

"I should very much appreciate it if you could indicate which of your 1972 candidates are either Negro or Mexican American."

The list of these kinds of letters can comprise a textbook. While women are often included in the affirmative-action categories, the above letters keenly illustrate a distinction between minority and majority group women. Preference is given to minority women, and the waiving of formal qualifications is not geared to help white women, for these candidates usually possess the necessary qualifications.

Now listing statements by highly influential people who determine policy, Oscar E. Shabat, the chancellor of the City Colleges of Chicago (comprising seven units), has instructed the presidents of the various colleges that race is to be the prime factor in hiring new faculty members as administrators. *Chicago Today* (March 8, 1972) further reports that at Kennedy-King College, whose faculty is already 37 percent black, Shabat has "told the president to hire 10 additional black teachers." The reader should note that the racial proportion of the staff at Kennedy-King already exceeds the general black population of the country, as well as that of the city of Chicago. (Here black demands are approaching community control.) Dr. Shabat also added that "when 52 systemwide contracts expire in July for teachers, many qualified whites will not be rehired and blacks will be sought to fill their jobs". In other words, whites, no matter how well qualified they are, will be replaced by blacks whose major qualification is the color of their skin.

At Columbia University, a memorandum written on January 20, 1972, by William T. deBary, executive vice-president for academic affairs and provost, to the deans, directors, and department heads, begins with a statement of the need (a) to demonstrate that hiring policies are in accord with the affirmative-action program of the Department of Health, Education, and Welfare, (b) to "make every effort to locate and consider women and minority groups" for openings, and (c) consequently, to state this need in all letters and communications sent to candidates and university placement bureaus. Each department is to keep a file for 18 months to provide a statistical base to serve as a record of what was done for hiring on the basis of race and sex, as mandated by HEW. Candidates are to be subdivided into five categories: black, Spanish-surnamed, Oriental, Caucasian, and other. The first two categories, it seems, are to receive preferential treatment. Further, although the memorandum urges that qualified people be sought for openings, they will not necessarily be the most qualified candidates, since race and sex are to be major considerations for hiring. Thus, even at Columbia University scholarship and excellence are being subverted under the guise of equality for all groups.

Although the practices instituted at Columbia are now common at other institutions of higher learning to meet HEW's requirements for body counts and quotas, ethnic categorization is carried to absurd and confusing extremes. For example, Seabury (1972*a*) points out that San Francisco State College now defines six racial groups to implement the affirmative-action program: (1) blacks, (2) Orientals, (3) other nonwhites, (4) persons of Mexican, Central, or South American ancestry (except those who have physical traits that resemble those of blacks, Orientals, and nonwhite races), (5) Indians, and (6) all other Caucasians or whites. As Seabury states, "All but the last category are eligible for discriminatory preference". Another of the institution's hiring policies is to make the college's nonacademic personnel ethnically mirror the population of the Bay Area.

---

[3] The truth is, this person was unable to find a job at a university. In the meantime, the *Chicago Sun-Times* (September 4, 1973) points out that a black male who has not yet completed his dissertation for sociology has already received job offers from ten different universities with salaries ranging up to $20,000. This is comparable to what the average full professor (after 15 years of university experience) makes at the average institution of higher learning.

According to a letter to the editor of the *New York Times* (January 6, 1972) by four professors at Cornell, the president of the university wrote to the deans, directors, and department heads setting forth a "new and innovative program to help achieve affirmative action"; this included the hiring of "unqualified or marginally qualified people." (In other words, under the guise of innovation, Cornell was to hire unqualified people.) One week after the letter appeared in the *Times*, the directive was clarified or changed—depending on one's interpretation—that the new hiring program applied only to nonacademic personnel. But it is hard to believe that the original directive was not related to the hiring of professors and administrators, since those who received it hire for such positions.

At the State University of New York (SUNY) at Albany, one of the 72 institutions of the system, six affirmative-action memorandums were issued between August 10 and December 3, 1971, by various vice-presidents. Department heads were asked to consider anticipated vacancies through termination of contracts over a five-year period and to determine "how many of these vacancies could feasibly be allocated to minority groups." The memorandums recommended the hiring of "qualifiable" people on the basis of race and sex and "temporary preferences . . . to members of minority groups." This hiring was to be on a three-to-one ratio for professors and a "one-to-one hiring of minorities affecting all of the administrative staff." In short, these six memorandums represented clear requests for quotas, violation of the Fourteenth Amendment, and disregard of individual merit. Furthermore, they virtually forced administrators to hire on the basis of race or let essential jobs go unfilled and advocated the debasement of academic standards by the hiring of "qualifiable" people.

The SUNY story was told by the *New York Times* (March 3, 1972) and subsequently by several upstate New York papers including the Albany papers. The director of SUNY's Office of Equal Employment Opportunity tried to ameliorate matters by explaining that "none of the memos or statements were issued as policy . . . they were suggested guidelines." With twisted logic, he argued that as policy the guidelines were illegal, but as suggestions there was nothing wrong with them. He failed to point out, however, that such guidelines, written by persons in higher echelons of the university, are usually followed—at least by people who wish to maintain their jobs. Sherman (1972) points out that on April 24, 1972, SUNY issued a new statement on affirmative action which showed some improvement. It supported "the selection of the best-qualified people," but in view of HEW's pressure it maintained that "a department with a black or female candidates still has a better chance of gaining a new position or retaining a vacant one." The new statement did not call for consideration of the nonretention of qualified whites, solely to support HEW's programs, as did the first memorandum. The new statement represented a welcome concession but no guarantee that it would be followed. Sherman adds that it was a small triumph when one of the liberal assistant professors admitted that it would be unjust to terminate his contract "for the purpose of replacing him with a black person." Indeed, a liberal educator had been educated to the realities of today's perverse "equality."

For the six-month period between January and June 1972, the *Chronicle of Higher Education* (a bimonthly newspaper on higher education which also lists jobs openings at colleges and universities) indicated that for more than 25 different positions a preference for minorities was expressed. There was a greater number of ads that included the term *affimative-action employers*, often a euphemism for quota hiring; moreover, the June 5, 1972, issue advertised an "active file of 111 minority candidates available for September 1972 employment" (p. 7). And, the *American Association of University Professors Bulletin* (March 1972) cites the "Harvard University Report on Academic Tenure" about the competition to find qualified blacks and that "Havard and comparable institutions have been warned against 'raiding' black colleges in the South".

There are several court orders in the North and in the South, even in Alabama and Mississippi, which require that police, fire, and sanitation departments, as well as electrical, plumbing, construction, steel, iron, asbestos, and other labor unions, hire one black for every white or even a greater percentage of blacks than of whites until the ratio of blacks corresponds with their proportion of the population. The fact that blacks are not proportionately represented on the police force of a city may reflect the fact that, because of hostility to the police, many blacks, even if they are qualified, are reluctant to enter a career in the police department. As for blacks' inferior education and low test scores, these factors—although obvious and perhaps part of the explanation—cannot be mentioned or used as reasons for blacks' having had and continuing to have trouble passing civil service examinations.

The New York City plan gives a new twist to affirmative action. Former Mayor Lindsay initiated his own arbitrary executive order, requiring all contractors for the city to submit goals and timetables through 1977 along with their contract bids. At the same time, the city passed legislation that will give minority workers an average of 26 percent of the jobs in the construction industry by 1978. Contractors who violate the percentages or, more accurately, quotas are subject to loss of their contracts with the city. Similar executive orders are being implemented for all city jobs such as in the fire, police, and sanitation departments. What is questionable here is whether a city has the legal privilege to enact its own affirmative-action program that goes beyond the state and federal guidelines.

Revised Order No. 4, issued in April 1972, also rules that it is discriminatory to require of a new applicant qualifications any higher than those required of "the lowest-qualified incumbent." Rather than being permitted to upgrade the work force, educational, business, and other institutions are compelled by this regulation to lower the standards of performance. It opens the door to the hiring of someone who cannot meet current standards or qualifications because some incumbent was hired long ago either by some mistake or when standards were lower because of the scarcity of college-educated people, when there was a scarcity of people with advanced degrees, or when the institution was struggling for recognition. In effect, the government has applied Gresham's Law to the job sector; the result is bound to be a downgrading of quality in the professions and in the work force. Furthermore, HEW now insists that an institution "may hold certain vacancies open until such time as qualified minorities are found and considered," although such positions may not be set aside to the exclusion of nonminorities. The question is, how long can an institution keep a position vacant? Is it not easier to hire someone who is unqualified, one who will meet the guidelines of the federal government, than to explain why someone could not be found? Does this posture not lead to the exclusion of nonminorities, and especially white males? In effect, the government requires that "qualifiable" minorities, not the most qualified persons, be hired and promoted to meet suggested goals and timetables. Revised Executive Order No. 11246, issued in October 1972, now mandates this to all federal contractors and employers. [b]

The absurdity of the quotas is evidenced by the orders issued to the National Guard in North Dakota. Federal government officials told the guard it had to recruit 20 blacks to balance its membership racially, although there are only 20 eligible blacks in the entire state. The general in command of the guard in North Dakota provided the following census breakdown. There are 2,496 blacks living in the state, and 2,346 are members of the armed forces. Active military personnel would seem unlikely candidates for the guard. This leaves 150 blacks: 60 are women, 40 are under 18 or over 45 years of age, and 30 are college students from other states with little interest in enlisting in the National Guard in North Dakota for six years. This leaves 20 eligible blacks, some of whom are physically unfit. Officials in Washington had studied the 1970 census to determine what proportion of blacks the state guard should have. They had come up with the figure of 20, although the general calculated the figure to be less than one person, as shown above. Said the *New York Times* (March 4, 1973), "this is further proof that Washington bureaucrats . . . know little if anything about life beyond the Potomac River."

As Rabb (1972) points out, the government has forced institutions to substitute quotas for achievement and competition. To argue that the minorities will be "qualified" is to evade the issue and fail to admit that "qualifiable" connotes something quite different from qualified. The inescapable assumption of this ascriptive approach, of what turns out to be a quota, is that minorities and especially blacks cannot compete, even with a competitive margin. "The proposers of such a quota system are calling, then, for a social welfare program, pure and simple, which indeed should not be considered performance-connected." And Seligman (1973) quotes a number of blacks who are growing uneasy about the idea of hiring less-qualified minority-group members. "It puts the 'less qualified' stamp on the minorities you do hire," many of whom are qualified. There is the growing feeling among employees of those institutions and businesses that hire or promote blacks that capabilities did not enter into the hiring decisions. Questions concerning the qualifications of the person who was hired will occur to the white applicants who did not get the job, to the customers who deal with the black employee, to the student who is taught by the black professor, and, of course to the black person himself. In effect, one aspect of reverse discrimination is that it makes both the white and the black persons involved feel that members of minority groups do not have the same abilities as whites and are not able to make it on their own.

Concerning quotas, Seabury (1972*b*) points out that, once they are established as an institutional practice, quotas are quite likely to be perpetuated for obvious reasons, that is, custom and pressure by the groups who benefit. For a complex society like our own, which depends on the skills of individuals composing it, the end result is mediocrity and a downward trend in our standard of living. We want tests that predict learning and show achievement levels and aptitude to perform jobs, yet such tests are being abandoned by schools, colleges, civil service, and private industry because of pressure from the black community and affirmative-action programs.

We want qualified students to go to college and universities, who can read, write, and calculate with a reasonable degree of proficiency; otherwise, there is a simple downward regression to the mean in standards and grading and the college diploma becomes meaningless for most graduates and highly suspect for minorities, including those who are able students. Yet most institutions of higher learning have adopted informal quotas for minorities, including many prestigious institutions such as Harvard, Princeton, Yale, and Michigan State. In Scholastic Aptitude Test (undergraduate) scores and Graduate Record Examination (graduate) scores for entering minorities, the great majority who are black are now often in the lowest 25 percentile on a national level, thus taking away a seat from an individual that would normally require a 90 or higher percentile range. Kilson (1973), the black economist, summarizes the whole situation at Harvard and other prestigious colleges as "irresponsible."

In line with this new policy, most colleges and universities are asking student applicants to voluntarily respond to a supplementary "civil rights questionnaire," where the applicant checks if he belongs to a minority group or is a Caucasian American. Here we can assume that a minority applicant gladly fills in the questionnaire—almost guaranteeing himself admission into a college or university. It is usually taken for granted that the individual who does not volunteer the information is white. Other admission forms now require the applicant to check an appropriate racial category, and many even require a photograph—a return to the pre-1954 Brown decision, only almost in reverse—to limit whites.

Admission into college and universities is seemingly guaranteed to minorities, despite academic qualifications. The U.S. Office of Education has established separate test norms for blacks, Spanish-speaking, and other designated minorities and another norm for the rest of the student population. Instead of outlawing tests for schools, which the Supreme Court did with tests for jobs, the USOE has devised a dual system whereby a black student who reads as well as other minority students of his age group is considered to be a "normal" or "average" reader. To put it in a different way, the black student who reads 3½ years behind his white counterpart at the twelfth grade (as purported by the Coleman report) is considered to be a "normal" or "average" reader. Although the USOE aims their action at the public schools and justifies their action on the basis of tests being unfair to minorities (notice they do not consider disadvantaged white populations or first generation students from Europe who have langauge problems), this approach now implies that universities will have no excuse not to admit minority students who have trouble reading, writing, or doing basic mathematics problems. Both the *New York Times* (September 9, 1973) and Shanker (1973*a*) point out that public schools across the country are acquiescing to this dual testing program, a program which will justify two racial learning standards because of fear of losing federal funds. At the present, one exception is District 19 in New York City, which refused to go along with the USOE and has been punished by the federal office and has had withheld its $964,000 in annual federal funds. The handwriting is on the wall for colleges and universities who refuse to honor these dual standards; they too can be threatened by loss of federal monies. [c]

We do want a qualified surgeon when we need an operation, yet there are now hard quotas in medical schools—seats reserved not for the most qualified applicants but for the most qualified minorities.[3] We want a skilled lawyer when we are in trouble, yet there are hard quotas for candidates applying to law school.[4] We want a plane serviced by skilled mechanics and flown by a skilled pilot when we travel by air, yet the airlines are under pressure and are hiring their share of minorities in all jobs at all levels and are upgrading minorities on the job. In universities we want high standards of scholarship and excellence, yet there quotas are pervasive and professorial positions are filled not with the most-qualified people but rather with "qualifiable" persons and some whose qualifications may be equal only to those of the lowest-qualified incumbent.

Despite all our legal, moral, and ethical talk about the need for affirmative action, it takes many years to educate and create qualified doctors, lawyers, professors, industrial executives, etc., of any color, and no increased federal pressure and no increased demand are going to increase the supply immediately unless we wish to lower standards. In effect, in the eyes and minds of many people, we are making "black" synonymous with "substandard." Within a few years people will really ask themselves and others, "How did the person get the job? Besides belonging to minority status, does he have any legitimate qualifications?" According to Seabury (1972*b*), "Our existence places us at the mercy of persons often invisible to us, who are certified for their qualifications." Although we may argue about how skills are elicited and measured, "we can hardly argue that certain people are more skilled and equal in given jobs than other people." But there are those among us who argue for equal results rather than equal opportunity for minorities and do injustice to the criterion of excellence. Those who accept this argument and its "spreading influence may well constitute the single greatest threat to the quality of our lives today".

Mayer (1973) contends that when students are admitted to colleges, medical schools, law schools, and engineering schools by open admissions or quotas, immense differences will soon begin to appear in a large number of difficult jobs. [d] And Ravitch (1973) maintains that social science has not found a way "to make those who are dumb, lazy, and unambitious win equal rewards in a fair competition with people who are smart, ambitious, and talented" (p. 88). But it seems that the government has found a way to do so, by abolishing fair competition and standardized tests for employment and by establishing separate test norms for minority and nonminority students. The government is ensuring equal employment and equal "success" for all groups and an egalitarian society through affirmative-action programs. But the goal is not the desire to promote equal opportunity but a political philosophy of equal results which, according to Ravitch, "requires not only efforts to upgrade those who are unequal below the median, but also active steps to level-down those who are unequal above the median."

In a society built in correspondence with this philosophy, almost anyone who displays talent or brilliance and is white (white females are still discriminated against in favor of nonwhite females) is frozen in his position or sent to the end of the line to make room for a minority person. In effect, the white person is penalized for his abilities because of his color. In contrast to equal opportunity, which encourages competition and excellence, equal results discourages competition and ability and leads to reverse discrimination. Indeed, this is perhaps the only time in the history of a democratic society anywhere in the world when the majority has been discriminated against for the sake of the minority. It is perhaps the only time in history that a society has been told that reverse discrimination is an acceptable method of employment.

---

[3] Shephard (1972) indicates that in 1971, 79 out of 101 medical schools reported that admission requirements were being lowered to admit additional racial minorities; more women also were admitted into medical schools. Yet I would conjecture that the requirements for white women were similar to those for white males.

[4] The Committee on Academic Nondiscrimination and Integrity (1972) cites a recent study by the Association of American Law Schools, reporting that all but 2 of 50 law schools surveyed indicate preferential treatment toward racial minorities.

As an example of a medical school's effort to reach this new "goal," the *Village Voice* (August 31, 1972) indicates that the University of Illinois Medical School has reserved 60 out of 300 places in its incoming class for minorities. A similar example, of a law school, is Stanford University, which virtually guaranteed admission in 1972 to any minority student whose grade-point average was not below that of the lowest-scoring Anglo in the 1971 class and whose Law School Admission Test score was within 50 points of that of the weakest student in the previous entering class

By the time this book is published, these statistics will be outdated, and we can expect quotas on a nationwide basis to have snowballed and to be apparent even to many college students attempting to gain admission to professional schools even though they may not be aware of the term *affirmative action* and what it affirms.

According to the Committee on Academic Nondiscrimination and Integrity (1972), these targets and goals—in effect, what has boiled down to quotas and reverse racism—are "defended as compensating for past injustices," yet we fail to recognize that "they only perpetuate injustice." Goodman (1972) points out that in a recent court case in Minnesota dealing with firemen, a dissenting judge argued that the plaintiffs seeking employment could not show how they were ever denied employment in favor of less-qualified whites. Furthermore, past racial discrimination against blacks did "not justify racial discrimination against white applicants."

The right to be free from discrimination is an individual right, as the Supreme Court has continually stated; it is not a right delegated to a broad mass or group, and it should not be abridged on the basis of a person's race. Justice for one group is utterly meaningless if it requires injustice toward another group. It is essential to outlaw all forms of discrimination, but not by promoting discrimination against other persons. The whole principle of reverse discrimination denies the basic American principle that an individual's advancement depends on his qualifications and not on his heredity.

"If quotas are justified for one group, why are they not justified for other groups?" ask white ethnics who have been discriminated against in the job sector. We can stretch our imagination and claim that quotas should be justified for registered Republicans at universities, since so few of them teach in institutions of higher learning, or for Poles, Greeks, and various Slavic groups as well as Catholics, since they also are underrepresented in universities. Since Jews are underrepresented in trade unions, banking, and insurance, why can't we have quotas for Jews in these fields? Since homosexuals are underrepresented in almost all phases of the economy, why shouldn't we have quotas for them, too? Since in proportion to the national population the number of blacks far exceeds that of whites in basketball, baseball, boxing, and parts of the entertainment industry, why shouldn't we use the principle of quotas now being applied against whites in other fields and thereby limit the number of blacks in sports and entertainment until whites catch up? If we can hire marginally qualified university professors because they are black, why can't we hire marginally qualified basketball players because they are white?

If illegal quotas are camouflaged and continued as goals and timetables in affirmative-action programs, what is to prevent any well-organized group from demanding its full share of quotas? Indeed, we already hear rumblings of "Irish Power," "Italian Power," "Polish Power," and the like. What is to prevent the majority from availing itself of precedents established by affirmative-action programs? Rather than continuing to polarize this country, rather than continuing to create bitterness and hostility among the majority groups who now feel discriminated against and argue that the government has overlooked their needs and concerns and favors only blacks, we need to implement a viable program of equal opportunity.

Such a program would consist of enforcing laws against discriminatory practices but would clearly safeguard against reverse discrimination. Quantitative measures must be used to establish some kind of criteria for standards, and there must be some tolerance for the fact that some groups achieve better in one area or do better in cognitive areas while others do better in psychomotor areas. The fact is, different people and different groups have different strengths, and it should not be taboo to admit that no two persons or groups are totally equal. Our policies should promote equal opportunity, with the person with the best qualifications receiving the appropriate job, not equal results, which fosters mediocrity and penalizes individuals for being talented if they belong to the wrong group.

If members of one group predominate in an area of employment, that fact is not adequate evidence of "discrimination" or "racism." Rather than proportional representation, we must consider the eligible manpower and qualifiable talent within the job market of a geographical area. For example, in 1972 there there were only 1,500 black Ph.D.s in the country, not all of them in higher education. It is impossible for institutions of higher learning to have an adequate representation of blacks on their staff's without lowering scholastic requirements. The fact is that only 2 percent of the engineers are black. How can an engineering firm employ a proportional representation of blacks in the city of Chicago, which is nearly 35 percent black, or in Detroit, which is nearly 50 percent black? And yet, this is what the present affirmative action suggests.

In communities and states where the black population is less than the general population, the black community and affirmative-action officials are arguing that representation should correspond with the general population, whereas in places where it exceeds the general percentage they are arguing for job representation that corresponds with the local population. This tactic must be corrected, because this overall pattern of hiring and promotion is even more unfair to whites. Furthermore, overall the black population is younger than the white population. The U.S. Riot Commission Report (1968) indicates that 45 percent of the black population are under age 18, as compared with 35 percent of the white population. About one out of every six children under age five is black and one out of every six new babies is black. This menas it is still more unfair to claim jobs in proportion to the local or general black population, since a greater percentage of blacks than of whites are young and are not looking for full-time employment.

It must also be pointed out that job applicants are at no time required to identify themselves by race, color, or nationality. No such records should be maintained by an employer or institution, yet a few bureaucrats in the federal government are breaking the government's own laws to implement affirmative action.[e] The government may have the right to enforce affirmative action, but it also must prevent abuses in such programs. Federal officials, although they seem overzealous in pressuring institutions of comply with their *illegal* quotas, do not appear to be as interested in stopping and correcting the abuses that stem from these quotas. In *Hughes* v. *Superior* (1950) it was stated that racial quotas and discrimination against an individual are unconstitutional, and this has been repeatedly upheld by the Supreme Court. Individuals who claim discrimniation as well as reverse discrimination should be permitted speedy grievance machinery. Seemingly, only claims of the former type are acted upon with any haste, especially since the Office of Civil Rights, the Equal Employment Opportunity Commission, the Office of Federal Contract Compliance, and the Department of Health, Education, and Welfare are administered mainly by the liberal-black community. In addition, affirmative-action officers at the federal government level and within individual institutions are usually members of minorities. Affirmative-action officials should be interested not only in seeing that employers comply with government regulations but also in stopping abuses brought about by government pressure and in acting upon complaints by individuals who feel injustice has been done by the policy of reverse discrimination.

In the final analysis, reverse discrimination is unconstitutional, just as any form of discrimination is unconstitutional. We can expect the legal skirmishes concerning quotas at the lower courts to eventually reach the U.S. Supreme Court. What is objectionable is not so much preferential hiring within reasonable discretion, but rigid quotas that leave little room for maneuver, and in the end are bound to be a denial of equal opportunity. Furthermore, a group of invisible bureaucrats who were never voted into office by the people and who are not accountable to the voters, should not have the right to make regulations that have the effect of laws.

It is essential that the reader understand that the Revised Executive Orders No. 4 and 11246, which have brought about affirmative action, have been decreed and interpreted by a few middle-ranking bureaucrats in the Department of Labor and its derivative organization HEW, and HEW's offshoot organizations such as the Office of Civil Rights and the Equal Employment Opportunity Commission. In particular, three bureaucrats are instrumental in devising affirmative action policies: William J. Kilberg, principal negotiator of the Labor Department's Office of Federal Contract Compliance; J. Stanley Pottinger, former director of the Office of Civil Rights; and William H. Brown III, chairman of the Equal Employment Opportunities Commission. While the original Executive Orders have constitutional precedence, pursuant to the Civil Rights Act of 1964, it is questionable if the revisions are constitutional; moreover, it is doubtful if the Act was ever intended to authorize a few middle-ranking bureaucrats and their field representatives to exercise power of life and death over say General Motors, Columbia University, the International Brotherhood of Electrical Workers, or the entire civil service: city, state, and federal.

Both OCR and EEOC officials are using guidelines set forth in a document dealing with construction companies in Philadelphia—where there were specific problems of hiring minorities—and have transferred the guidelines from one specific situation to just about all industries and institutions across the country. This is incredible. They have taken a plan which was devised for a relatively uneducated pool of people and have proclaimed that the same percentage of minorities must be available in other fields such as the university, medical and legal professions, industry, skilled unions, civil service, etc.—and if they are not available, standards must be lowered to meet appropriate body counts, and tests for jobs and admission into professional schools cannot be applied because they tend to be used to maintain standards.

Advocates of affirmative action try to tell the critics that "affirmative-action goals are usually arrived at through collaboration between government and private parties, while quotas are imposed arbitrarily upon the employer." If what is going on between government and the various institutions is "collaboration," then what will happen when duress is used? The fact is, schools, universities, businesses, unions, etc., are being bullied into compliance under the threat of court suits and loss of federal contracts and federal funds.

The most fascinating aspect of affirmative action is that the concept of what are reasonable goals and timetables continuously changes, thus putting the investigated institution always on the defensive and at the mercy of the whims of the overzealous bureaucrats who search for evidence. According to Senator James Buckley (1973) of New York and Seabury (1972*a*), these field bureaucrats may reject goals and time tables at any time, giving the institution 30-day notice for swift rectification, even though no charges of discrimination have been filed. Innocence must be quickly proven, or acceptable means of rectification devised. The findings are not based on qualitative available manpower figures, but rather on quantitative figures with the assumption that if the number of minorities does not correspond with population figures, the specific institution has practiced past discrimination (*New York Times*, September 23, 1973). That there are a limited number of minorities in certain jobs does not necessarily reflect the institution's past discrimination, but more accurately reflects the pool of available qualified minorities. (Again, if in 1972 there were only 1,500 black Ph.D.s in the country, how can we reasonably expect all the universities to employ their share of blacks?)

The bureaucrats claim the right to search for evidence and investigate personnel files. In the past, institutions have denied the FBI and other governmental agencies access to these files. Liberals have always argued that this form of investigation approaches totalitarianism, but with millions of dollars at stake either in lawsuits or in the loss of federal monies, administrators are now literally afraid to say no. Employees, workers, and faculty members remain silent, and the fear of being denounced as a "racist" pervades. While the country remains in an uproar over the ransacking of Watergate, the people are silent about the ransacking of personnel files where job classifications are grouped according to racial and sexual counts. Under the guise of justice, we have permitted an illegal policy—a reverse South African policy—to suddenly erupt where individuals are either visually identified by race or voluntarily fill out policy forms of racial designation.

In no way do affirmative-action officials use the terms quotas or reverse discrimination; rather they rely on timetables and goals. Therefore, they argue that the critics are wrong in charging that affirmative action is a quota system or a form of racism. HEW bureaucrats know that they will lose their case if they use a quota system or the notion that we can rectify past injustices toward innocent victims by present injustices toward innocent victims (Seaburry 1972*a*). Nevertheless, the thrust of affirmative action and the fears of administrators in schools, universities, private industry, the unions, and civil service are real (and in part illustrated by the above letters and policy statements). The thrust of goals and timetables have the effect, if not the purpose, of strict quotas and reverse discrimination (Buckley 1973).

The absurdity of this policy is self-evident: it is worse than absurd, it is designed to accomplish a vicious, inherently discrminatory policy toward the majority populace. It mocks everything that the civil rights movement has sought to accomplish in the past; it applies one set of rules for one group and another set of rules for another group, it is based on a standard of advancement based on heredity and color, and it discriminates against many people who have had no part in discriminating in the past. The whole policy penalizes individual excellence and is based on rewarding and producing mediocrity.[f]

When we reflect on this trend, we realize that justice is not found by some mathematical formula, but rather on some more humble process in which people correct their prejudices and consider the rights of others. As Frankel (1973) asserts, some of us may think this new policy is just, but "we can be fairly sure that what we have found will only have a temporary validity" (p. 61). In the meantime, the silent majority should seriously consider becoming a little more active and vocal in voicing their complaints to their congressmen. If the people were given a chance to vote on affirmative action, it is highly probable that what it affirms would be overwhelmingly defeated. And, if people had the guts to throw body count compliance questionnaires in the waste paper basket and file counter lawsuits and injunctions against interpretations of the Revised Executive Orders, the laws that were originally designed to protect individual rights and due process might be reapplied. If people claimed they were of minority status, and let the institution make their own interpretations, just think of what might happen to affirmative action.[g]

Surely there is a need to deal with a greater sense of reality. Who is supposed to share the blame for past injustices, or for that matter can we accurately determine who should be penalized? What is the minority pool of skills and talents? How can it be increased? What is the present trade-off between increasing minority employment and decreasing efficiency? Are all women included in affirmative action, or does it mainly apply to minority women? Where do the benefits of civil rights enforcement begin to fall off and lead to abuses toward the majority population? When do the arbitrary interpretations of a few unelected bureaucrats become a matter for the people to check?

COMMUNITY ACTION AND FEDERAL SPENDING: WHO BENEFITS?

The War on Poverty and its various social and community action programs, was launched in 1964 under an umbrella agency called the Office of Economic Opportunity (OEO). The OEO started with a $1.5 billion (1963 fiscal year) budget and dispensed funds rapidly without any real knowledge or evidence that what it was doing made sense or would work to improve the conditions of the target population, the poor. As Glazer (1972*a*) and Green (1972*a*) point out, the object was to spend the money for purposes for which the Congress had appropriated it, regardless of whether the programs were plausible or viable. Officials felt obligated to spend all the money appropriated down to the last penny. It was the expense-account syndrome: "You know your boss won't increase your expense allotment unless you spend every bit of this year's budget."

It was only later that people in Washington began to question the results of these programs. Evenutally, there was a realization that no one Nixon pointed out these programs had not worked, and in his budget message he claimed that these programs were "poorly conceived and hastily put together." At another level, however, the budget with its cuts in social welfare programs was proclaimed by liberals and blacks to be directed against the nation's poor.

It did not matter that these programs did not work; various interest groups (and a few other naive individuals who are seemingly influenced by catchy slogans) were shocked and angered. They ignored the fact that Nixon had increased spending for Head Start, food stamps, civil rights legislation, loans to minority businessmen, implementation of new laws against discrimination, social security benefits, welfare payments, and unemployment insurance. They also ignored the fact that revenue sharing was actually geared to making up indirectly many of the cuts in direct federal spending for community action programs.

The new efforts to shift responsibility to local government might be perhaps considered "counterrevolutionary" if the cities were supposed to finance the programs. According to Banfield (1973), the 1974 budget proposes to give states and cities more federal aid than they received in previous years. The new revenue sharing may represent "a facing of the fact, obvious in the Johnson administration but not faced by it, that federal programs have become too many and too complex to be administered from Washington" (p. 34). Granted, it might take city governments one or two years to make appropriate adjustments, but in the meantime many of the community action programs can still be financed under specific grants. Some community action programs are threatened, true, but this is probably for the good, claims Glazer (1973), since they did not solve the problems of poverty and often encouraged antisocial behavior.

The fact is, it is difficult to determine exactly how the residents of poor communities benefited from most of the old programs. This does not really seem to be the major concern of most of the liberal-black community, especially the militants. They have managed to mobilize public opinion against program cutbacks by creating false impressions and demanding "reform." And as the rhetoric for "reform" continues, it is often those with the loudest voices, rather than those with the most compelling needs, who are heard. Despite the loudness and the shouting of demands, perhaps with revenue sharing some of the silent poor groups (which local governments are often more aware of than is the federal government) may finally get some money for community plans.

CONCLUSION

In the early 1960s, the liberals successfully advanced the War on Poverty and various social programs. Subsequently, local antipoverty and community groups entered into the political arena to advance their own special interests. Most of these groups were connected with the civil rights movement; but as the white liberals faded from the picture, the groups became more militant, more assured, and less willing to compromise and to work within the democratic process. In the mid-1960s, community control exploded in the New York City schools and the theoretical idea spread across the nation with full impact in Detroit. Again liberals espoused this new "wisdom"; and as black militants entered this movement, white teachers and administrators became the new casualties.

Both community action and community control are linked to the black power movement. Traditional democratic methods envisioned by early liberals in the War on Poverty and in the school arena were rejected by black militants because, they claimed, such methods had failed in the past. They argued that blacks had to organize themselves and exert their own power. Rather than work within the system, black militants regarded it as illegitimate so long as whites were involved in educating or providing services to blacks. One black caucus after another asserted that integration was no longer viable to the black community and that whites were no longer wanted in black schools and communities. Conflict and confrontation—boycotting, demonstrations, picketing, physical assault, and violence—became the main weapons of those advocating community control and community action programs. These programs survived with Nixon, but barely, and some people are finally beginning to admit that many social programs did not do what was promised, just as we are discovering that "participatory democracy" in the schools is neither participatory nor democracy.

POSTSCRIPT

a. Despite the surplus of available candidates, the 1973 issues of the *Chronicle* bulge with more than 200 "position available" notices per issue. The norm is now to include the words "equal opportunity employer" and/or "affirmative-action employer." Minorities are specified to apply. Prior to 1970 this would connote a color-blind, nondiscriminatory practice; today, it means a color-consciousness, discriminatory practice in reverse. In one issue after another (e.g., June 4, October 1, October 15, November 5, November 12, 1973), the *Chronicle* reports that university professors across the country are unionizing to protect their jobs, and authors link this trend with affirmative-action policies and the overall employment trends. Qualified individuals without tenure find their jobs in jeopardy, and themselves unable to find employment elsewhere in their fields, in order to make room for individuals defined by the government as minority-group members.

Perhaps one of the most enlightening issues of the *Chronicle* is the October 23, 1973 issue, where it is reported that black professors accuse middle-class white women as being aggressive and deflecting attention away from correcting racism. There are countercharges by white women that so few blacks have the formal credentials for faculty appointments, and those that are qualified (and even qualifiable) are immediately hired and able to command higher salaries than their white male or female counterparts because of supply and demand. In this connection (although not mentioned in the above controversy), some racial minorities are considered more "minority" than others; that is, preference is given to some minority groups in comparison to others also defined by the government for special consideration. The difference usually coincides with local political power and the minority background of local compliance officers.

b. In its Sunday Midwest employment section, the *Chicago Tribune* (December 2, 1972) reports a similar dispute taking place between blacks and white women in the business and industrial job sector. Racial minorities blame the women's movement for taking away their jobs, and white women are claiming that they lose out in the job market "because the hiring of minorities make companies look good." Both sides contend that the other group will profit more from affirmative action.

In the meantime, the 1973 winter issue of *Business and Society Review* indicates that minorities and women are being advanced to desirable jobs in corporations on a quota system, not on merit. Corporation executives sense backlash and low morale and warn against declining production. Jules Cohn, author of the *Review* article, maintains that unrealistic affirmative-action plans will add to employee frustration. The plans must be based on realistic manpower needs and available labor markets. Those who are not members of protected groups should have access to grievance procedures and promotions should be based on merit.

c. There is now new evidence of imposed racism attached to federal funding. School districts across the country which are in the process of applying for the Emergency School Assistance Act (ESAA) are required for the granting of funds to create an advisory committee composed of teachers, community or civic representatives, and parents. The creation of such a committee is not unusual, as Albert Shankerf points out in the *New York Times* (November 25, 1973), but they are different in that they call for racial quotas with respect to committee membership and specifically to teacher representation. "Minority" representation is defined in accordance with HEW's own definition.

Rather than work at racial harmony, the U.S. Office of Education (an agency within HEW) is surveying 30,000 fourth and fifth grade students in 183 schools in 95 school districts receiving ESAA funds. The first question of the new "Elementary School Questionnaire" asks if the respondent is "Black" . . . "White" . . . or "Brown." Among the questions that follow are "How do you think your parents feel about Black and White students going to the school together?" "How do you think your teacher feels about Black and White students going to the same school together?" "Do you think Black students in this school cause more trouble than other kinds of students?" "Do you think White teachers in this school are unfair to students who are not White?" (Each of these questions are repated with black-white, brown-white, and black-brown combinations.)

The USOE defends this questionnaire and also claims that if parents object, their children may be excused from answering the questions. This is a dishonest reply, since the students were surveyed in late 1973 with the accompanying directive that they answer them immediately. Moreover, HEW's action in stripping District 19 in New York of almost 1 million dollars for refusal to cooperate in its testing program, combined with the federal government's mandates on affirmative action which are tied to federal monies, makes the schools afraid to resist because of the possibility of losing much-needed funds.

d. In November 1973, the U.S. Supreme Court agreed to consider the *De Funis* case; this should have far reaching implictaions for college admission quotas. With a near "A" average and a *magna cum laude* graduate of the University of Washington, De Funis applied to the School of Law in September 1971. He was rejected, but he discovered that 38 other applicants, all racial minorities with worse grades and lower Law School Admission Test (LSAT) scores were accepted. The University's rationale was that preferential treatment was being given to minority groups. The Washington Superior Court ruled in favor of De Funis, and he was admitted into law school. The University appealed to the State Supreme Court which reversed the decision, ruling that the law school had the right to consider race as a special factor in admitting minority students and acknowledging that more qualified white applicants would be displaced. In an angry dissent, James B. Wilson asserted: "Racial bigotry, prejudice, and intolerance will never be ended by exalting the political rights of one group or class over another . . . . The circle of inequality cannot be broken by shifting the inequities from one man to his neighbor." And if this author may add, the kind of reverse discrimination being urged by social reformers unjustly penalizes innocent individuals who bear no responsibility for historical wrongdoing.

Furthermore, while most minorities are "disadvantaged," many are not, nor are all whites "advantaged." Power politics prevents us from making this distinction. If white women can claim victimization, why can't they claim it on standardized tests and college admissions? Why can't other groups who have suffered from discrimination claim the right of preferential treatment? Why can't white ethnics who speak in a foreign language at home claim that tests are biased against them? The perils of contagion are manifest. *The Chicago Daily News* (November 26, 1973) reports that the Polish American Committee claim discrimination in educational and employment opportunities and are filing charges with the EEOC.

By lowering our college admission standards, we are bound to have a regression of standards downward to the mean. And as Martin Kilson asserts in the November 1973 issue of *Change* magazine and Thomas Sowell points out in *Black Education*, there is a double standard in grading blacks and whites in institutions of higher learning. This double standard predominates in *all* levels and areas of higher education, just as it predominates in nearly all sectors of the job market. Students quickly perceive the benefits of this new grading system, and it is bound to affect their self-esteem, not to mention the impact it has on students who graduate without favoritism. Thus, graduation does not guarantee equality of academic outcomes and professional competence. Those who benefit from the less vigorous testing scale often must compete on professional licensing examinations with those who were not favored. The NAACP, combined with black militant pressure and the politics of the courts, have either eliminated or watered down licensing standards and objective tests in city schools across the country. The *Griggs* court decision abolished job related examinations for blacks in all sectors of the economy.

At the present, a law suit has been filed by black law-school graduates which challenges the Michigan bar examination. In 1971, 71 percent of the white candidates and 17 percent of the black candidates passed the examination. The plaintiffs claim that the test is "culturally biased" against blacks. Similarly, the National Bar Association, composed of black lawyers, has called for the abolition of the bar examination in all states for the same reason.

The claim of cultural bias has become a successful ploy to eliminate standardized and competitive examinations in school and work. It is difficult to understand what is culturally biased about solving mathematical problems, reasoning in the abstract, writing a simple sentence in formal English, or being tested on subject matter that is related to one's professional specialty. In lieu of test scores for some racial minorities, college admission officers and job personnel officers now rely on a vague and more subjective criteria: personal qualities, such as "motivation," "maturity," and "potential."

e. A new federal regulation now requires that all federal, state, and city employees be coded by ethnic and racial origin for purposes of "research" and for "affecting decisions concerning personnel with respect to . . . recruitment, assignment, and promotion." The EEOC admits that its definition of "White," "Black," "Spanish surnamed," "Asian American," American Indian, and Other are inconsistent with anthropological data, but it contends that the definitions and coded classifications are "now . . . necessary and appropriate." The Third Reich (and more recently South Africa) also claimed that it was compelled to implement governmental classifications of people according to its own definition of ethnic and racial origin.

f. A balance must be struck between groups who claim preferential treatment and the entitlements of individuals who belong to groups in our society who are not favored, nor permitted special privileges, nor provided with legal counsel and support of civil rights organizations and federal compliance agencies; these individuals are entitled to their rights and opportunities, too. While group interests today supersede individual rights, the concept of group rights is antithetical to the Constitution. If the nation is to prosper, individual merit, measured as objectively as possible, must be reimplemented. The past clearly shows that discrimination does not work, nor does it result in social harmony. A double standard in society, especially where the majority must suffer, cannot work for long and can lead to political upheaval.

g. There are no easy solutions to this problem. While efforts should be made to recruit and promote *qualified* people from diversified backgrounds, we must recognize that it is impossible to bestow instant competency on anybody. While special efforts should be made to identify qualified individuals of minority status, and other programs are needed to assist potentially qualifiable minorities to become qualified, essential prerequisits and criteria for diplomas and jobs cannot be dropped for an extended time without social repercussions and a decline in economic growth. Being unable to test for competency and ability because of the ploy of "cultural bias" is at best well meaningful and illogical, but in reality, highly political. Indeed, the present use of numerical goals vs. body counts is not the main issue; neither policy should be permitted to make the growing danger of a *de facto* system of quotas or incompetency. Individuals need to write to their Congressmen in Washington stating their position in their own words; they need to place ads in newspapers to mobilize grass roots action campaigns; and organized groups need to bring the issue to the attention of the voting public, to seek a referendum, and to find out where candidates for office stand on the issue of reverse discrimination. While expanding educational and economic opportunities for individuals of *all* groups is a long-range goal, thus diminishing the intense competition for scarce existing opportunities, a short range goal includes a workable coalitional strategy that is multi-ethnic and bi-sexual.

In 1960, John Gardner, in his classic book on Excellence, raised the question whether a society can strive for equality and excellence. No society yet had solved it. The book, although widely read, did not have a major impact: Gardner had raised the question ten years too early. Today, it has become a crucial issue, with equality transforming into equal results imposed by goals or quotas (call it what you want, depending on your own politics). Indeed, there is tension between the ideal of equality and that of maintaining excellence. Slacken standards, and we are bound to get poorer quality. Limit one's definition of excellence to intellectual areas, and we limit the ideal of equality. But the more we eliminate or even diminish the importance of intellect, the greater the danger of decline and of stretching the tension wire that snaps society altogether.

THE UNIVERSITY OF IOWA,
Iowa City, Iowa, August 15, 1974.

Hon. JAMES G. O'HARA,
Chairman, House Special Subcommittee on Education, Rayburn Office Building, Washington, D.C.

DEAR REPRESENTATIVE O'HARA: The August 9, 1974 newsletter of the American Council on Education indicates that your Committee is conducting hearings on the implementation of affirmative action programs in colleges and universities. I am very glad to learn that your Committee is conducting these hearings. They are needed.

As one who has protested to HEW about the implementation of the affirmative action program, I should like to convey to you my concerns about HEW's insistence on numerical goals for the employment of members of minority groups and females. Despite everything which may be said to the contrary, these numerical goals are very easily translated into quotas. I am convinced that at a goodly number of institutions numerical goals have become quotas for all practical purposes.

The basic problem is that HEW does not seem to understand the unique nature of the problem involved in the hiring of college and university faculty members. Our goal is, and has been, to employ the best available person, regardless of race, color, religion, or national origin. Furthermore, we operate in a market where the supply of highly qualified persons is limited. A university such as the University of Iowa can fill almost any position on very short notice—if only minimum qualifications are required. The problem is to find the person who has the rare creative and scholarly qualities to function as a truly effective faculty member. To have numerical goals or quotas imposed by an agency such as HEW means that in the long run quality will be sacrificed for the sake of making one's statistics "look good" to HEW.

I would have no objection to a program which would call for "best estimates" of what an institution can accomplish over a period of years. These estimates can take into account the availability of properly qualified individuals in the various teaching fields. (There are very few highly qualified women and minority group persons in certain fields.) Furthermore, if evidence can be gathered to show that an institution is not really appointing the best available person to a vacancy, then I would agree that the appropriate agency should call that institution to task. But to threaten institutions with loss of federal funds unless certain quotas are established is, in my judgment, an outrageous example of unnecessary interference on the part of a federal bureaucracy in the life of a college or university. Some of this has already happened and threats have been made of more of this sort of thing in the future.

I wish to make my position perfectly clear. I support the goals of affirmative action and feel that I have always done so. But when an agency steps in to insist that certain numbers of people who are members of certain groups must be hired, or else, then I believe it is time to protest as I have done in the past and shall continue to do in the future.

I sincerely hope that as a result of your hearings, HEW will be instructed to substitute "best estimates" (of what can be accomplished) for numerical goals and that there be reaffirmation of the principle that colleges and universities must be free to appoint the best available person to each faculty position regardless of the "group" to which the individual may happen to belong.

Thank you for your attention to this letter.

Sincerely yours,

DEWEY B. STUIT, *Dean.*

THE UNIVERSITY OF ROCHESTER,
Rochester, N.Y., August 19, 1974.

Hon. JAMES G. O'HARA,
Chairman, House Special Subcommittee on Education, Congress of the United States, House of Representatives, Washington, D.C.

DEAR CONGRESSMAN O'HARA: The August 9, 1974, issue of the American Council on Education's "Higher Education and National Affairs" reported the testimony of John H. Powell, Chairman of the Equal Employment Opportunity Commission, in part as follows: "in the area of education, there is still a lot of resistance" [to ending job discrimination]. The concept that institutions of higher education are above or at least not in the same relationship to the rest of society is shared by a large segment of the population, and by most institutions of higher education as well. This view is frequently held, notwithstanding glaring realities to the contrary."

If Mr. Powell has been quoted accurately by the publication, the impression I draw from his statement is that he believes that institutions of higher education consider themselves above the laws and regulations prohibiting discrimination in the services provided students and in the employment of faculty and staff. If that is the correct interpretation of Mr. Powell's testimony, I believe he has misjudged institutions of higher education in this country.

My responsibility at the University of Rochester includes both serving as the institution's affirmative action officer for academic employment and supervising our office of Admissions. With regard to making educational opportunities available to minorities and women, the University of Rochester had undertaken substantial special efforts before the existence of Title IX. Using its own resources, the University established an educational opportunity program which not only sought to encourage applications from minorities to the University but also provided special remedial programs for students who came from disadvantaged educational backgrounds but who showed the basic abilities and motivation to benefit from the high equality education available at the University of Rochester.

In the area of affirmative action, the University of Rochester promptly met its obligations to develop an affirmative action program and to carry out that program vigorously. Our difficulty with the government agencies responsible for administering that program resulted not from any lack of enthusiastic support on our part for its objectives, but rather from our inability to convey to governmental agencies the special aspects of recruiting faculty in a research university. The scarcity of minorities who have qualifications for appointments in research universities, the high degree of specialization in appointments to faculties, and the great amount of decentralization in recruitment and appointment decisions are factors which differentiate the recruitment of faculties in research universities from recruitment of employees in a typical industrial firm. The governmental agency with which we had experience in reviewing affirmative action programs has had difficulty in adapting its administration of the program to these differences. It has also been difficult to convince the agency of the importance of a salary policy based on merit rather than a fixed rate structure.

I want to assure your Subcommittee that the University of Rochester heartily subscribes to the goal of equal opportunity both in education and employment. The excellence of a university depends centrally upon the excellence of its faculty and supporting staff. That excellence cannot be achieved if we deny ourselves access to outstanding people because of race, religion, or sex. Moreover, the central goal of a university is the greatest possible development of the individual. An institution which so concentrates on individual achievement can hardly subscribe to discrimination based on group stereotypes.

Sincerely yours,

ROBERT R. FRANCE.

STATE UNIVERSITY OF NEW YORK AT ALBANY,
Albany, N.Y., August, 14, 1974.

Hon. MARIO BIAGGI,
House Office Building,
Washington, D.C.

DEAR CONGRESSMAN BIAGGI: I was pleased to learn of your concern about the manner in which anti-discrimination laws are being enforced by Federal agencies in dealing with colleges and universities. Despite claims to the contrary by HEW, the Department of Labor and the Equal Employment Opportunity Commission, the haste with which a zealous group of people acted in this area is deplorable.

Having been associated with civil rights and equal opportunity efforts for many years, I regret the creation of a needless backlash by well intentioned Federal efforts. The lack of professionalism, and elementary common sense we have encountered is amazing. Contradictory rulings, barely veiled threats and the like have given ammunition to those opposed to affirmative action, and turned off some of its most ardent supporters.

All of this could have been avoided had the zealots been controlled and top administrators taken the trouble to inform themselves about the somewhat special problems of universities and colleges. As a group, we did not seek special treatment but did ask for recognition of special problems. The unions had special problems, so did industries, so our need was not unique. Instead we got harassment with predictable results.

Mr. John Powell of EEOC testified recently about the large number of charges of discrimination filed against universities. Considering the kinds of evidence Federal agencies accept as supporting such charges, I would expect everyone with any kind of real or imagined grievance to take advantage of a priceless opportunity to create trouble. We stand guilty before a hearing and often are forced to compromise to avoid the threat of worse harm.

I hope that you will continue your efforts to bring some sense into this field. Some universities probably are guilty of discrimination, more may have failed to recognize bias in some of their procedures. Those situations should be remedied following due process in an atmosphere free of intimidation. As citizens, certainly we who happen to have jobs in universities are entitled to no less.

Sincerely,

CHARLES T. O'REILLY.

UNIVERSITY OF CALIFORNIA, DAVIS,
August 26, 1974.

Representative JAMES G. O'HARA,
House of Representatives,
U.S. Congress,
Washington, D.C.

REPRESENTATIVE O'HARA: I am writing to you in response to an article on page 8 of the August 19 issue of the Chronicle of Higher Education. I was particularly concerned about your statement that reverse discrimination is no more defensible than "old-fashioned, straight-forward discrimination."

The whole theory of affirmative action is to give preference to women and minorities to overcome the detrimental effects of past discrimination. That is, affirmative action is the practice of reverse discrimination. It is very different from "old-fashioned" discrimination, particularly in the following respects. First, it is temporary, to be applied only until the effects of past discrimination are overcome. Second, it is deliberate, following well constructed guidelines to achieve specific and clearly stated goals. And third, it is accomplished with reason, with care to avoid lowering of standards or diminution of quality.

In fact, "old-fashioned" discrimination and the type that is necessary to achieve affirmative action have very little in common. Reverse discrimination is not built on predjudice, is not emotionally rooted, is not going to adversely effect a whole segment of a population.

As chairman of the House Special Subcommittee on Education it is terribly important that you understand these distinctions. I hope that the quote which appeared in the Chronicle was indeed misleading.

I applaud your efforts to define the affirmative action guidelines more precisely, and dearly hope that you will succeed in fending off the watering-down pressures which no doubt confront you. The sooner we accomplish the goals of affirmative action, the sooner we can dispense with the plans.

If I can be of any assistance, please do not hesitate to call on me. I will be in Washington on September 3. Should further discussion seem fruitful, please contact my secretary, Lee Saucerman, at 916-752-6050 to make arrangements.

Yours truly,

KATHLEEN M. FISHER,
Director, Teaching Resources Center.

SEPTEMBER 10, 1974.

KATHLEEN M. FISHER,
Director, Teaching Resources Center,
University of California, Davis, Calif.

DEAR MS. FISHER: Thank you for your thoughtful letter of August 26. You have taken the time to set down your views in some detail, and I hope you won't mind if I do the same.

The quotation from the Chronicle which you repeat in your letter was quite accurate. My hearings, as you note in your letter, are intended to define affirmative action and other obligations of institutions of postsecondary education, and I am willing to wait until all the testimony is in, and all the arguments have been set forth before I come to the conclusion that affirmative action as it is practiced in higher education either is or is not correctly described as "reverse discrimination".

But if it is, and your letter starts from the proposition that it is, then I don't see how it can be distinguished, morally or legally from the kind of discrimination that has kept women and members of minority groups out of university employment.

I won't take issue with your assertions that reverse discrimination is temporary, deliberate, or undertaken for a purpose. If a thing is wrong, none of those qualities seems to me to exculpate it. I think the real root of our disagreement appears when you defend reverse discrimination on the grounds that it will not "adversely affect a whole segment of a population."

The reason I have supported civil rights legislation throughout my public life—and earlier is because I have always believed, and I believe to this day, that there are no such things as group rights. You have no rights stemming from the fact that you are a woman. I have none stemming from the fact that I am a man. Neither of us has any rights arising out of our race or religion. You and I have individual rights, because we are human beings. We have a right to be considered, as individuals, on our individual merits, for a job or for admission to a school or for whatever. It is only as individuals that we have rights, only as individuals that our rights can be violated, and only as individuals that they can be protected. The fact that a practice does or doesn't adversely affect a whole segment of the population seems to me to be a monumental irrelevancy. Does it affect Kathleen Fisher? Does it affect Jim O'Hara? That is the whole question, in my mind.

Maybe I am hopelessly out of date. Maybe we are in an era when people are first of all members of a group, first of all men or women, first of all whites or blacks or chicanos, or whatever, and that it is from that identity that their rights and responsibilities will stem. If that is where we are headed, then I am afraid that the cause I have fought for—the cause of human equality, without regard to race, sex, ethnic origin or religion, has lost a major battle.

Very truly yours,

JAMES G. O'HARA, *Chairman.*

UNIVERSITY OF CALIFORNIA, DAVIS,
September 18, 1974.

Representative JAMES G. O'HARA,
House of Representatives,
U.S. Congress, Washington, D.C.

HON. REPRESENTATIVE O'HARA: I appreciate your thoughtful reply of September 10th. I am reassured that we are in one hundred percent agreement that the basic struggle is for human rights and human equality. I think that we are also in agreement that the basic problem is *how* to achieve equal opportunity for all persons.

The philosophy that underlies affirmative action is the following. Even if we could eliminate all prejudice and discrimination immediately, there would be a strong tendency for the status quo to be maintained by lack of inertia for change. The present racial and sex imbalances in employment and in our schools would for the most part persist. Realistically, of course, we can not eliminate all discrimination and all prejudice immediately, but through a process of deliberate preferential treatment of women and ethnic minorities, we can increase the proportion of such people in many areas of human endeavor. By such positive pressures, we will gradually achieve a state of equal opportunities for all persons, a reduction in prejudice, and we will provide necessary and important role models for younger people.

Perhaps you, Congressman O'Hara, can think of a better means to achieve these goals which we both desire? But so far I have not succeeded in thinking of a better method than affirmative action, nor have I seen one proposed by others. The footdragging and empty rhetoric that characterizes current HEW efforts is appalling. Hopefully, your committee will find some means to improve the situation.

Yours truly,

KATHLEEN M. FISHER,
Director, Teaching Resources Center.

[From Change, June 1974]

THE FUTURE OF ANTIDISCRIMINATION ENFORCEMENT

(BY *George R. LaNoue*)

In higher education and elsewhere, the federal government has become the major enforcer of a wide range of antidiscrimination legislation, the scope and extent of which are only now beginning to be widely recognized. Federal agencies are spending over $100 million to make these laws stick and to create new antidiscrimination programs. But the effectiveness of these programs in higher education must be questioned.

The magnitude of the problem has led to the creation of so many enforcement mechanisms that public policy and procedures have become badly tangled. Aggrieved individuals find their cases delayed or lost in the bureaucratic maze and the accused employers often wait months for a chance to have the issue resolved. The problem exists in all sectors of society, but it is particularly acute in higher education with its complex personnel decisions.

There are now seven major avenues for someone wishing to press a charge against a college or university: (1) the Wage and Hour Division of the Department of Labor, (2) the Office of Civil Rights of the Department of Health, Education and Welfare, (3) the U.S. Equal Employment Opportunity Commission, (4) state and local fair employment commissions, (5) the federal courts, (6) the American Association of University Professors, and (7) local campus grievance procedures. Each of these avenues has certain advantages as wel as liabilities as a mechanism for resolving discrimination complaints. In my judgment, action by federal agencies will have substantially eliminated most types of systemic discrimination in higher education within the next three years. Antinepotism rules, restrictive maternity policies, exclusive old boy recruiting networks, and wage discrimination will largely disappear from all major academic institutions.

INDIVIDUAL CASES

Less institutionalized forms of discrimination, however, will be harder to root out. The academic professional employment process is so decentralized that it is quite possible to have some discriminatory and some nondiscriminatory departments within the same institution. Appropriate evaluations of academic performance are often quite difficult to make even where sex and race are not involved. Honest disagreements are commonplace, particularly if individual merit is taken seriously in the institutional reward system.

Within a few years, the preponderance of cases will concern individuals who allege discrimination in their failure to be promoted or granted tenure, and colleagues or administrators who argue that they are incompetent or lack professional distinction. These charges wil increase dramatically. Job alternatives in today's academic market, after all, are poor, and there is very little lose by not bringing a charge.

Which agencies are the most appropriate to hear such cases? If the issue is salary discrimination against women, currently the most endemic problem in higher education, it seems likely that the issue can be resolved with some dispatch by the Wage and Hour Division of the Department of Labor. Although some complex policy questions remain (i.e., to what extent may an institution reflect differences in market supply and demand in its salary structure if that has an adverse effect on women—for example, paying scientists more than language teachers), previous interpretations of the Equal Pay Act will cover most abuses. Wage and Hour can go to court if necessary to enforce its findings, but compliance usually precedes that step. The Equal Pay Act, however, applies only to salary and fringe benefit issues and only to sex discrimination. In the long run most collegiate problems wil range beyond the coverage of the Equal Pay Act.

Most attention in higher education has focused on the Office of Civil Rights (OCR)—HEW, under the authority of Executive Order 11246. That document gives HEW the power to require any university with a federal contract to employ on a nondiscriminatory basis and to institute an affirmative action plan. The sanction for failure is delay and eventual loss of federal contracts. There has been in its administration considerable confusion of policy and some serious difficulties. In fact, no contracts have been finally terminated though several have been delayed. Where an institution has engaged in systematic discrimination, contract penalties may be an appropriate sanction. But where the issue involves a single individual's tenure or promotion, the contract sanction is probably improper and unworkable. Using a cutoff of federal contract funds to a whole institution because of a disagreement about an individual grievance is like arming a police force with nuclear weapons. In punishing the guilty so many innocents would be harmed that the weapon cannot in fact be used.

That is one of the reasons why OCR agreed in the fall of 1972 to turn all individual complaints over to the Equal Employment Opportunity Commission (EEOC). EEOC enjoys a number of advantages in handling this kind of complaint. Its staff is larger. As an independent commission it is not so subject to political considerations and, unlike HEW, it has no educational programs of its own. Furthermore, the EEOC's sanction is litigation, not contract cutoffs. Litigation in this sense is more surgical. It can focus on the precise issue of discrimination and can create flexible remedies.

EEOC, however, currently suffers from a backlog of 85,000 cases (about 1,500 in higher education.) Despite the fact that it has doubled its budget in the past three years and has made many administrative improvements, some of its own planners predict a backlog of 250,000 cases by the end of this decade.

It should not come as surprise, then, that it takes an average of 32 months to settle a case. Since most higher education grievance cases are unique and complex, investigations tend to be especially time-consuming. Furthermore, the commission will soon be following a track system policy. Cases assigned to the first track—national employers with a large number of employees—will receive priority. Although EEOC will take some higher education cases to establish internal policies and judicial precedents, most academic grievances cases will not be on its priority track.

In short, EEOC and the other federal agencies will play an important role in setting policy, defining employment discrimination and in eliminating systemic problems, but it is too much to ask them to settle all of the future campus personnel conflicts where discrimination is alleged. It is not only logistically impossible but ultimately inconsistent with the interests of acadamic freedom to have federal authorities play that role.

State and local agencies are not going to be so much help, either. Although they vary in quality, the nonfederal agencies combating discrimination do not enjoy a particularly distinguished record of effectiveness, and the risk of political manipulation of campus grievances is even greater than at the federal level.

MORE FOR THE COURTS

It is inevitable that an increasing number of academic discrimination charges will be decided in the courts. In the long run, however, the courts cannot play a comprehensive monitoring role either. Litigation is costly, time-consuming, and erratic. Furthermore, courts may decline to become enmeshed in such decisions. In *Green* v. *Texas Tech*, the only academic discrimination case to reach a Federal Circuit Court of Appeals thus far, the unanimous opinion was "the findings and decisions of academic administrative bodies are to be upheld by the courts when reached by correct procedures and supported by substantial evidence."

For these and other reasons, most academics still regard the traditional academic procedures (AAUP or campus committees) as the most appropriate forum for pressing a grievance. AAUP has expanded its long-time preoccupation with academic freedom to include discrimination cases. (The number of complaints it processed increased from 550 in 1970 to 1,139 in 1973.) But AAUP is changing its role to participate more aggressively in collective bargaining. As a potential bargaining agent, it is barred from deciding grievances at campuses where other organizations represent the faculty and is not welcome in situations where collective bargaining is being considered. As AAUP becomes more aggressively "labor," it cannot maintain its honest broker image of pursuing only abstract values of academic freedom and nondiscrimination in administration/faculty conflicts.

It becomes increasingly clear that there is a need for an appeal process from the individual campus to a body that would be both competent to judge academic performance and that would also be knowledgeable about discriminatory practice and discrimination law. Here the major disciplinary associations could play a role. About 90 percent of full-time faculty are in the disciplines represented by the 20 largest associations. Individual membership varies by discipline. Most of these associations (such as the American Political Science Association and the Linguistic Society of America) possess the rudiments of a grievance procedure, but these procedures have not been well funded, staffed, or used. There is now a need for the associations to respond to the demands for settling discrimination complaints in a more structured way. Given the tight academic job market and the changing national ethic about appealing to outside authority, negative campus personnel decisions may produce as many as 20 to 200 formal grievances in the large disciplines a year. The most difficult and perhaps most frequent cases will be instances where the charging party alleges discrimination and the institution alleges insufficient performance for promotion and tenure. (Most of the current cases involve women, but a rash of reverse discrimination charges can be expected in the future.) Selected and trained members of the discipline can probably be the best judges of the merits presented by the party and the institution.

Each discipline could appoint a panel called the Academic Review Committee (ARC) that would be prepared to hear such cases. The 10 or 12 members might be on sabbatical leave, recently retired, or otherwise available. While I believe it should be the association's role to select the panel, they should not administer the system for two reasons. First, they lack the personnel and fiscal resources. Second, an association of professors could not maintain membership loyalty and still be completely objective in deciding a number of administration-faculty disputes. For that reason, the associations should nominate the panelists, but the system should be administered by the American Council on Education or some consortium of higher education associations. It should receive the funds, determine the schedule, and select the three or five ARC members for particular investigation or working teams. By separating the nomination and administration functions, neither "labor" nor "management" should feel that the system is biased.

How should the system be funded? Initially, it might be financed as a foundation experiment, but eventually the costs should be borne by the institutions themselves, perhaps supplemented by federal money. Institutions are going to have to pay for the settlement of these cases in some way, whether through litigation costs or professorial time on campus grievance cases.

JURISDICTION AND AUTHORITY

The most complex questions are not those of organization of financing, however, but of jurisdiction and authority. ARCs should accept cases only where both sides have agreed in advance to abide by the decision. At this point, if either party should renege on that agreement, it is not certain that either the federal agencies or courts would regard the agreement as binding. (The Supreme Court has ruled that neither EEOC findings nor decisions of arbitration proceedings can ultimately prevent an employee from exercising the Title VII right to final court determination.)

Nevertheless, if the ARCs develop sound procedures and carefully follow Title VII law, I think the courts will pay them great heed and ultimately merely monitor their results. The courts are not eager to invest their resources in sorting out scores of tenure decisions. Further, appeal from an ARC decision that both parties naturally sought may not be very common. A university that reneged on its agreement to accept the ARC ruling might be barred from further use of the ARC alternative and might discover that the courts are not very hospitable. The grievant, on the other hand, would probably find it too difficult to get a court to overturn the judgment of a nationally selected, trained panel of disinterested peers that decided a lack of merit rather than discrimination existed.

In short, if the ARCs are well administered and render verdicts consistent with public policy, I believe they will establish a role even without any statutory change or formal agreements. Eventually, Title VII may need to be amended to recognize this kind of alternative.

Instituting effective review committees will require some rethinking of institutional roles, and some hard decisions and compromises. But the ARC alternative offers a number of advantages. For the grievant, the ARC alternative offers a forum that ought to be quicker, cheaper, and more private than other routes. To be vindicated by one's academic peers will make restoration to a normal professional role much more likely than if the judgment is strictly governmental. For the university, a timely and efficient hearing is also advantageous. Preserving the privacy of personnel judgments and records is equally important. Utilization of the ARCs ought to reduce the federal investigatory presence on campus and keep evaluations of persons and programs out of the public record of briefs and court decisions. Too often damage is done to the reputations of persons who are not directly parties of the case but whose career records are introduced as comparative evidence.

For the disciplinary associations, the ARCs create a mechanism for protecting members' rights. These procedures can provide a focus for the associations to articulate professional standards in the light of equal employment opportunity requirements. For the government agencies, the ARCs can be a resource of much needed expertise on academic issues. To the extent that they actually settle some cases, they will reduce the backlog and permit a federal focus on systemic issues, policy development, and blue-collar problems. An entirely new body, such as the one proposed here, may be the best way to eliminate discrimination and protect academic freedom.

DePauw University,
Department of Political Science,
Greencastle, Ind., September 17, 1974.

Congressman James G. O'Hara,
Special Committee on Education,
Cannon House Office Building,
Washington, D.C.

Dear Congressman O'Hara: Thank you for your letter of September 11, 1974 inviting me to submit written testimony to your committee for the purpose of expressing my views on the question of compliance with civil rights laws and institutional eligibility for federal funds. I am pleased that Mr. Miro Todorovich of the Committee on Academic Nondiscrimination and Integrity has submitted my name as a possible witness before your special committee, or in lieu of the restricted time, to present my views in written form.

In my opinion the policy of affirmative action has many worthwhile features and it should be maintained. As specified in the Civil Rights Act of 1964 and Executive Order 11246, this policy strengthens the very worthwhile effort to broaden the recruitment process at institutions of higher education to include candidates from all kinds of minority groups and all elements of American society.

However, I believe this policy has been improperly administered by the Office of Civil Rights at the Department of Health, Education, and Welfare. This office has interpreted this law and executive order in a manner which has established quotas and/or timetables by which universities and colleges receiving federal aid must have a certain number of faculty members from a few specified minority groups. This action in turn has increased the demand for persons from these minority groups which has resulted in grossly augmented salaries and created many inequities in the salary scales at numerous institutions of higher education. It has caused the recruitment of blacks, women, Chicanos, etc., in a manner which ignores the interests and professional qualifications of white males. This policy has damaged morale and professional standards in the academic community.

I am not familiar with the specific legislation pending before your special committee on education. I frankly doubt if much new legislation is really needed to restore equality and justice in the recruitment, compensation, promotion, and tenure of faculty members at institutions of higher education. The present legislation is adequate for this purpose and upholds the basic principles of our society and our political system. What is needed, I believe, is the proper implementation of this legislation by the Department of Health, Education, and Welfare. More precise guidelines and more careful oversight of the bureaucracy involved in administering the policy of affirmative action is the most urgent need.

Sincerely yours,

FRANK C. DARLING,
Professor and Head.

STATEMENT OF JUDY BERTELSEN, PRESIDENT, INTERNATIONAL STUDIES ASSOCIATION/WEST

In the current period of retrenchment in employment in institutions of higher education, affirmative action programs are even more important than they have been in the past. If opportunities for minorities and women are to be developed, federal leadership is essential.

Despite the efforts of recent years, the attitudes of many people in positions of influence in higher education remain negative toward minority and women candidates. In many cases, different standards for appointment and promotion are applied to minority and women candidates from those applied to other professionals. Furthermore, the criteria are often stated in vague terms that allow prejudice to masquerade as evaluation of subtle professional qualities. Unless institutions are required to comply with clear and fair standards, persons in positions of academic power in many cases continue to apply capricious (and in some cases vindictive) criteria in appointment and promotion of personnel, while hiding behind the doctrine that academics are somehow above the law, above due process, and beyond question.

The Carnegie Commission report on Opportunities for Women in Higher Education (September, 1973) paints a gloomy picture, due to a wide ranging retrenchment in higher education projected for the coming 25 to 30 years. It is important that the hardships of this period not be used as a smokescreen to "explain" failure to hire and promote qualified minorities and women.

SCIENTIFIC ANALYSIS CORP.,
San Francisco, Calif., September 20, 1974.

Hon. JAMES G. O'HARA,
Chairman, Special Subcommittee on Education,
Cannon Office Building,
Washington, D.C.

DEAR CONGRESSMAN O'HARA: As Chief for the Center of the Study of Women in Society at Scientific Analysis Corporation, and as the Chairperson of the Committee on the Status of Women and Minorities for the Pacific Sociological Association, I have had some experience with why affirmative action is necessary.

It seems to me, that many valuable additions to the Educational Committee are slighted by the patterns of what might be called institutionalized racism and sexism in our institutions of education. Many persons, even with the best will in the world, do not see how their notions of appropriate teachers and professors and researchers have become confused with their notions of the roll of men and women. My own experience has been in higher education, primarily with large universities. And I have been surprised, in that context, to see how many men and even women of good will have not yet grasped the issues of sexism, of reverse discrimination, of the unwitting use of standards of excellence which do not really examine issues of excellence but differentiate between men and women.

For these reasons, I wish to submit the enclosed report on one of our affirmative action investigations at U.C. Berkeley for the record. And I would like this report to stand as the testimony from me and my committee on the way affirmative action programs have not yet been properly accepted and incorporated into the workings of even a very good university with a faculty having the best wishes in mind for their students and teachers.

I would very much like to have a copy of this report inserted in your record and also in the Congressional Record. And for this purpose I enclose two copies.

Sincerely yours,

Dr. ARLENE KAPLAN DANIELS,
Chief, Center for the Study of Women in Society, Chairperson, Committee on the Status of Women and Minorities for P.S.A., President, Sociologists for Women in Society.

Enclosure:

SCIENTIFIC ANALYSIS CORP.,
August 15, 1974.

DEAR COLLEAGUE: The enclosed report of the joint investigation by the Pacific Sociological and American Sociological Association Committees on the Status Women has been sent to you for your information. This report has already been received by appropriate officials in the sociological societies and approved for distribution. The first group to whom this report was sent after association approval was the members of the faculty and student body at UC Berkeley with whom interviews were conducted.

We are now sending the report to other officials in the California University administration, representatives in HEW and OCR, local and state government officials from this region, members of feminist organizations, and other professional organizations concerned with AAP implementation and enforcement, and, finally, members of the press concerned with issues in higher education.

If you wish any particular official or person to receive this report, we will be happy to oblige. We would also be happy to receive any comments or suggestions you may care to make.

Sincerely,

ARLENE KAPLAN DANIELS,
Chairperson, PSA Committee on the Status of Women and Minorities,
Chief, Center for the Study of Women in Society.
RACHEL KAHN-HUT,
Representative,, ASA Committee on the Status of Women in Sociology
Associate Professor, San Francisco State University.

REPORT OF THE INVESTIGATION OF THE COMMITMENT TO AFFIRMATIVE ACTION, BY THE U.C. BERKELEY DEPARTMENT OF SOCIOLOGY, CONDUCTED BY THE JOINT COMMITTEES ON THE STATUS OF WOMEN OF THE PACIFIC SOCIOLOGICAL AND THE AMERICAN SOCIOLOGICAL ASSOCIATION

(Submitted by Rachel Kahn-Hut, San Francisco State University, representing the ASA Committee on the Status of Women in Sociology; Arlene Kaplan Daniels, Scientific Analysis Corp., chairing the PSA Committee on the Status of Women and Miniorities; Nona Glazer-Malbin, Portland State University and Solomon Kobrin, University of Southern California, PSA Committee Members)

INTRODUCTION

Early in the academic year 1973–74, a complaint charging discrimination against women and minorities in hiring practices was filed against the Department of Sociology at U.C. Berkeley by the League of Associated Women on that campus. The complaint was addressed to the chairperson of the PSA Committee on the Status of Women and Minorities, Dr. Arlene Kaplan Daniels. In an effort to establish a liaison with the parallel committee of ASA, Dr. Daniels contacted Dr. Cora B. Marrett, Chairperson of the ASA Committee on the Status of Women in Sociology, requesting a representative from that committee to aid in conducting the investigation. The purpose of this request was two-fold: 1) to develop a precedent and a format by which national and regional committees could work together on problems of common concern in the profession; 2) to follow the original mandate of the regional committee—to engage in investigations and projects at geographical distances too great (and too expensive to underwrite) for the ASA National Committee network. This first attempt at liaison was aided by the fact that a national committee member, Dr. Rachel Kahn-Hut, was located close to the investigation site.

Ideally, such investigations should be conducted by persons who do *not* live and work near the site of investigations to avoid any appearance of undue influence from or bias toward any of the parties involved. Unfortunately, since neither regional nor national organizations have yet been able to allocate funds for these investigations, these precautions cannot be taken. In this case, the committee owes much to the dedication and disinterest of Drs. Glazer-Malbin and Kobrin who made the trip and participated in the investigation entirely at their own expense.

The investigation occurred over a four-week period in March and April 1974. The major effort involved one evening of interviews with concerned parties and then a one-day visit to the campus by the entire committee. A final two days of investigation were undertaken by the two local members of the team, Drs. Kahn-Hut and Daniels, during the following three weeks. In addition, a number of telephone calls and letters were addressed to persons absent from the area but concerned in the case.

This report is divided into four parts: 1) the substance of the complaint; 2) the explanations from departmental spokesmen about why the complaints were not justified; 3) the dissenters' rebuttal; and 4) the evaluation and conclusions of the joint committee.

1. The Substance of the Complaint

On December 26, 1973, the Committee on the Status of Women and Minorities of the Pacific Sociological Association received a request to investigate hiring practices at the Department of Sociology of the University of California at Berkeley from Isabel Welsh, Coordinator for the League of Associated Women (an organization concerned with Affirmative Action at the University of California, Berkeley).

The League of Associated Women made its complaint after stating that the sociology department's own women's caucus had protested to the chancellor but had received no response from him. The core of the complaint against the department concerns secret hiring practices going counter to affirmative action guidelines. The specifics involved the disappearance of a position for a social demographer (when the Personnel Committee nominated a woman) which had been publicly advertised and the redefinition of a Chicano studies position (when the committee nominated a Chicano). The department voted not to accept the nominees of the Personnel Committee and shortly afterward hired two white men who met neither of the publicized job descriptions.

On November 29, 1973 the League of Associated Women, in a letter to Dr. Mary Lepper, Division of Higher Education, Office of Civil Rights, DHEW, charged bad faith was shown by the publication of announcements for jobs which had disappeared.

"The Department publicly (announced in Footnotes, a publication of the ASA) for a specialist in Chicano studies and a demographer under the guiding principles of equal opportunity and affirmative action hiring. This may be construed as the *public* response to the Women's Caucus protest (against the department). In the meantime, however, the Department . . . is negotiating an extra position of assistant professor (for a white male specializing in neither of the advertised fields) . . . behind the scenes and . . . on the ground of previous commitments."

The League concluded its complaint with the following statement:

". . . the professional bodies of colleagues responsible for monitoring the ethics of a profession should intervene and conduct a thorough investigation. We trust that you will accept this grave professional responsibility."

Thus the complaint states that the sociology department "repeatedly and deliberately violated both affirmative action guidelines and professional ethics in hiring practices." The basis for this charge was the hiring of two white males as assistant professors in positions which had not been publicly announced in advance. An additional charge was that these positions were filled with white males despite the recommendation of a legitimately constituted Personnel Committee that two women be hired for these positions; and that a Chicano be appointed to teach Chicano studies.

This complaint has a history within the administrative hierarchy of the University of California at Berkeley. The chairperson of the Affirmative Action Committee of the Academic Senate had questioned the hiring practices of the sociology department. When this questioning process elicited no satisfactory response, another interested organization (L.A.W.) filed the complaint described above. (See Appendices 1–4 for the Academic Senate Committee correspondence with the administration.)

2. *The Departmental Justification of Its Position*

Departmental spokesmen had a number of explanations for why the complaint was ill founded. a) One of the major arguments of departmental spokesmen was the general "good faith" shown by their department long before the law required it. The department hired women and blacks before such action was mandatory and the department can now point to that record by showing, on its roster, three women and four blacks. One in each of these categories is tenured.

One woman was hired after a university-wide fight against the nepotism rules in which many departmental members joined. Another woman was hired over two excellent male candidates, despite prior commitments to them. A majority of the temporary (acting) assistant professors chosen from their own students are women.

The fate of the non-tenured female and black faculty is not yet clear; but the department has made a diligent search for a professor of Chicano studies (i.e. a Chicano) and has gained from the administration the promise of an eventual slot should a suitable candidate be found.

Additional signs of good faith are shown by the pledge to admit a ratio of 50–50 male and female graduate students, despite one senior faculty member's estimation that in terms of excellence, the ratio should be closer to 70–30. Finally, with regard to minority graduate student recruitment, early efforts to find such students at out-of-the-way schools, initiated before AAP requirements existed, are now being resumed.

These, then, are the general arguments in evidence of solid good faith in efforts to meet AAP goals. In addition, a number of arguments are presented to explain why decisions *not* to hire women and minorities recommended by the Personnel Committee should not be taken as evidence of any bad faith.

(*b*) *The candidates discovered by the Personnel Committee were not sufficiently excellent.*—Neither the Chicano studies nor the demography candidate were sufficiently strong to warrant receiving an offer. An additional female candidate (considered when the other two slots appeared) is variously described as not strong enough because her work was rated somewhat below that of one of the male candidates; her area was not needed; the department does not hire its own PhD's. We were told that even the Personnel Committee did not strongly support her candidacy. They saw her only as equal to the other two candidates and left the choice to the department.

(*c*) *Prior commitments.*—There were prior commitments to the two white males for the next available openings. The fulfillment of such commitments is not a sign of bad faith because they were made before AAP guidelines at UCB explicitly prohibited such agreements. (The men were hired on temporary appointments in September 1972).

(*d*) *New positions.*—The two men found in an earlier (1971–72) search were hired in positions which existed either prior to or independent of the two advertised positions (1973–74). The department was able to persuade the administration to make these slots available because the growing enrollment in sociology made expansion necessary. And, in any case, these two professors took line appointments in 1973–74 before the advertisements for the Chicano and demography positions were public.

(*e*) *There was no deliberate effort to mislead in announcing openings for Chicano studies and demography.*—The advertisement for demography and Chicano studies slots (and the request to the Personnel Committee to search for candidates when openings were really not available) were not signs of bad faith. One informant explained that these may only be signs of poor synchronization of efforts and faulty communication between department and Personnel Committee, and department and the administration. There were no advertisements for the openings ultimately filed by two white males because these positions were tentative and questionable until the last moment. Therefore, the positions could not be advertised widely. Another informant argued that at least one appointment was possible as a trade off because the demography position had not been filled by a minority or a woman. Under these circumstances the administration allowed the department to hire a white male qualified in another field.

3. Dissenter's Rebuttal

(*a*) *Lack of good faith.*—Some argue that the appearance of minorities and women in faculty positions was not in and of itself a sign of good faith. It does not necessarily mean either a broad search or a review of other equally qualified minority and women candidates. Nor does it mean that any extra considerations were given to minorities or women. For example, one woman was hired as a person of superior excellence, demonstrated by her market value (competing offers) and her greater experience and training than that of two competing male candidates (without such excellent competing offers). Another woman was generally regarded as outstandingly able by many on the senior faculty though her appointment became possibly only because of simultaneous pressure for a woman candidate from student groups. Similarly, the black faculty member also received competitive offers at the time he received tenure in this department and had several times previously rejected a non-tenured offer.

(*b*) *The criteria by which minority and women candidates are judged are unfair (capricious, idiosyncratic, over-demanding).*—One instance which exercised virtually all dissenters from the departmental justification was the refusal to hire a specific woman PhD. It is argued that she was invidiously compared to one male candidate on publication and to another on area of needed expertise in the department. If she had been compared to the first on teaching, she would have been considered demonstrably superior. And if she had been compared to the second on publication, she would also have been superior. Therefore the Personnel Committee ranked her superior to one male candidate and equal to the other. If the department were truly committed to Affirmative Action, she would have been a strong candidate on the basis of this recommendation. Yet she was not presented as an Affirmative Action candidate; for her advisor thought it demeaning to such a candidate to raise extrinsic issues.

(*c*) *The dubiousness of prior commitments as an argument*—Were the department to continue in its concern for prior commitments, it might well have made such a commitment to this female candidate. Instead the decision was made to abandon a system of commitments which had caused so much trouble and which, in any case, was frowned upon by Affirmative Action guidelines. (See Appendices 5-6 for evidence that Affirmative Action was official policy on this campus at the time these issues arose.) But the system is only encouraged when it favors white male candidates. Similar "commitments" have been withdrawn from other women brought to the department on the ground that "no slots were available". Finally the question of these prior commitments is dubious. No written evidence for these commitments exists, and a senior faculty member denies that such commitments were made. He explained that there were no commitments beyond the assurance that these men would be candidates for future openings in the department. Other sources say they do not believe the commitments could exist; for one white male candidate was heard to worry about his chances for a post just *because* he had no such commitment in writing.

(*d*) *There is no evidence that announced openings for Chicano studies and demography were not intentionally misleading while there is reason to indicate these announcements were misleading.*—Negotiations between department and administration are cloaked in mystery. There is no way to assure the good faith of department assertions in this matter. However, there is reason to believe that one of the white males was hired in the Winter—after the advertisement of the demography position had appeared—and after experienced women candidates had applied.

(*e*) *There is no clear evidence that there has not been tampering with slots while there are indications of such tampering.*—Since the nature of administration-departmental relationships is hidden from public examination, it is impossible to feel secure that "negotiations" permitting the department to evade Affirmative Action guidelines were not made. Such suspicions gain strength, given that this administration was specifically warned much earlier by the Affirmative Action office of the Academic Senate that the issue was at best ambiguous and at worst might turn into an investigation by outside parties. (See Appendices 1-4) And, more generally, the administration is currently under investigation for long-term non-compliance with HEW regulations on Affirmative Action.

4. *Analysis.*

We are left with two questions. First, how good are the evidences of good faith presented to the investigation committee? Second, what powers do departments have, given the organization of academia, to subvert an Affirmative Action Program, either intentionally or unintentionally? In answering these questions we are somewhat limited because we were not permitted to see any records of the Personnel Committee and tenured faculty deliberations. Thus we are dependent upon reports and personal views of the people with whom we spoke.

(a) *Under these circumstances we feel forced to argue that clear evidence of good faith in working for Affirmative Action is missing.*—(See Appendix 5 for administrative recognition that the burden of proof of good faith lies in the University.) The basic difficulty stems from the fact that no clear understanding among the spokesmen (the word is carefully chosen here) of the department exists about what Affirmative Action means. First, every minority and woman present on the faculty is automatically defined as an example of working toward Affirmative Action goals. By implication such a view assumes or admits that each woman or minority would *not* have been hired without an Affirmative Action Program (or Title 7). Only in this perspective does the department appear conscientious in meeting Affirmative Action guidelines. But focussing upon this definition, the facts surounding the hiring of these persons are ignored. For example, one woman was hired in a tenured position after contributing teaching services without pay for several years in the department. Apparently her male colleagues bemoaned the injustice of this condition throughout these years without taking action until a much later date. And there is some possibility that this woman may have been accepted in the department because she wished part-time rather than full-time status. Another woman is claimed as an example of Affirmative Action hiring because she was given a line position when two men were actively sought at the same time as she were given lectureships. But this view ignores the fact that the woman already had a line position in another campus and would not have accepted a lectureship while the two men were not in the same bargaining position. (Interestingly, some faculty members see these two men as having been *deprived* of a job by Affirmative Action. In this view the redress of prior wrongs to women is subordinate to the sense that men unjustly lose their special prerogatives.) A third woman was hired on her merits, but at a time when there was cosiderable pressure from students to look for women candidates. Thus the interest in her candidacy was not clearly generated by department leaders.

(b) *Second, procedures used in the hiring of these women raise questions about departmental understandings of what Affirmative Action recruitment practices actually mean.*—One of the women was already employed for several years on the campus, one was a PhD from Berkeley living in the area, and a third was interviewed when she came to visit a professor under whom she had formerly studied. None of these candidates were found as a result of the systematic general search *required by Affirmative Action guidelines.* Thus, the presence of such members in a department is no sign of a commitment to Affirmative Action.

(c) *Similar doubts exist in examining the departmental assertions of good faith as evidenced in hiring blacks.*—Among this group only one has a tenured position. And he had refused a non-tenured offer several times. From his perspective, the research position he already enjoyed was better than a non-tenured line position (used as a "revolving door" position for minorities). Again pressure from students to keep this person may have played a part. One of the other blacks had a one-year appointment and two others were found in nationwide searches, but are in temporary positions and, we have been told, are unlikely to get tenure.

(d) *The same difficulty in finding evidence of a good faith understanding of AAP appears in the interpretation of the male-female graduate ratio admissions.*—One senior professor explained that applications were received at the ratio of 70% male to 30% females, while the admission ratio was 50–50. He interprets this selecton to mean less competent females must have been chosen over more competent males. But he presented no data to support the interpretation that sex ratio of application and excellence were correlated.

(e) *Claims of Affirmative Action are also weakened since we found little understanding of the notion that traditional criteria may not be relevant for hiring in certain positions.*—For example, the search for an appropriate candidate for a Chicano position involves finding an expert in Chicano studies. Such candidates are also evaluated for their expertise in theoretical and methodological issues. Thus they are held to the most exacting standards in areas besides their own. Such terms appear unfair unless candidates for other positions are similarly evaluated so that someone appointed as a methodologist should be required to show superior proficiency as a theoretician. The department demands high qualifications in all areas of specialization from Chicanos; departmental members are not willing to accept moderate proficiency in these areas in someone who can specialize in Chicano studies. This demand virtually closes off the possibility of hiring a Chicano, for all the Chicano faculty who have been produced come from three schools—Berkeley, Notre Dame and Texas. The department does not hire its own graduates and the training in the remaining schools is seen as not meeting the standards of the department. Therefore, there is no way for a Chicano person in Chicano studies to meet the requirements of this department.

(*f*) *Further, evidence of good faith is weak as long as women and minorities receive less advantageous offers than do others.*—For example, two white males may have been given "commitments" for future line positions when they were appointed as lecturers. When questions arose over the legality of such prior commitments, the department apparently restudied the situation, voted for these candidates strictly on the basis of their merit and found them superior to the minority (woman) candidate. The possibility of then making a commitment for the next line position to the woman candidate (about whose merit there was considerable agreement) was dismissed on the general grounds that moral commitments of this type seemed wrong. The force of such an argument would have been stronger had it not been selectively applied against an Affirmative Action candidate while upheld earlier in promises to two men. Such shifting of grounds for decisions is highly suspect as a disingenuous maneuver to justify prejudiced treatment of women and minority candidates.

The only requirement to assure the commitment to a line position for the two white males seems to have been adequate performance in their temporary jobs. The Chicano minority candidate and the woman were offered only temporary positions and told that they should not expect to move from a lectureship to a line position. In one case, the candidate was told that such a move was not possible. Thus, even if this candidate did accept the position and did perform adequately—let alone if he did better than expected—he could not expect to stay. The department seems to judge minorities as if such candidates were already up for tenure when in fact they are hired only for low- or off-ladder slots. Using such criteria eliminates any opportunity for a minority person to prove him- or herself. The operative concept of "qualified" according to one senior professor is, and should be "one of the leading one or two people in his field". Such a criteria will inevitably remove most minorities and women from consideration. This view shows no understanding of Affirmative Action guidelines. Permitting candidates from undistinguished schools or without distinguished sponsors to have a chance to demonstrate ability is *one of the major tenets of Affirmative Action.*

(*g*) *There are more subtle signs of lack of good faith—at least among some members of the department.*—One of the members—speaking for an hour and assuring the committee of the department's and of his personal acceptance of AAP was asked: "What do you think is the future of AAP on this campus?" The respondent gave a lengthy statement on the problem of hiring women. He expressed the belief there just aren't many good women around, and that many women are not committed to making a career in social science. As this situation changes—and he assumes it will be changing as child care becomes increasingly available—more committed and competent women will be available. However, he doesn't understand why we should assume that women will ever be attracted to academia in the same proportion as men. Further, he thinks a problem for women entering the field will always exist if they continue to be disinterested in what he sees as the core of the field—organizations, institutions, political and economic sociology. (We pointed out that one of the women who had recently been denied a position is exactly in this area; but his explanation for departmental resistance to her candidacy was that "At Berkeley they had enough people in this area.")

Such a position shows us a high-ranking professor in an important departmental status who still accepts all the traditional explanations for the absence of women in academia, ignoring the empirical information widely available, which destroys these myths. (No better critique of his view can be found than the document prepared by the Academic Senate on his own campus.) The position just cited also shows the continuing confidence in the conventional standards of excellence tied to a traditional view of the core of sociology. There are two ways in which this confident assumption works against Affirmative Action hiring. 1) Women and minorities have always experienced greater difficulty gaining acceptance in these traditional areas. 2) Areas where women and minorities tend to specialize can be ignored as peripheral and their expertise is not required in a prestigious department.

Another sign of lack of understanding—or appreciation of Affirmative Action—is reported by one of the candidates. She was told by her advisor that the issue of Affirmative Action had never been raised when discussing her candidacy—though the three people were considered by the department to be virtually equal in ability—because to do so would demean her. Affirmative Action guidelines appear to be interpreted by this advisor either to mean forcing "not as good" candidates on a department or to suggest she would be taking unfair advantage of her sex.

(h) We found difficulties in conducting an investigation without access to records.—We think some explicit prevarication by "responsible" departmental members to the committee may have occurred. It was explained to us that one of the newly appointed assistant professors, recently moved from a "soft money" to a hard "line" position, received a position written into the regular university budget for 1974–75. Such action would show that this position had *not* been traded for the demography position. Under very careful questioning a spokesman for the department assured us that the person moved into the regular position at the beginning of the budget year—July—as would be expected if the position were independent of other departmental and administrative issues. We were alerted to the possibility of prevarication by a faculty member who was out of the area in the fall and who received a letter reporting that the position for this lecturer had just been regularized. (As the faculty member remained on campus during the summer, there would have been no need to write about the matter if it had occurred in July as we were told.) Our suspicions were confirmed by a check of the payroll records which showed that this man was not in a regular line position as of October 1973.

Given the narrative materials offered the committee (we did ask for substantiation and were denied the opportunity to see any) there is little reason to assume good faith adherence to AAP from the Department of Sociology at Berkeley. We are in no position to prove specific intent to evade the law; however we find no basis on which to assume that departmental spokesmen have tried to live up to it.

The second, and more general, question to consider is what we may learn from this investigation about an academic department's ability to subvert the intentions of AAP. First, when there is no reason to assume that the university administration has shown good faith in requiring Affirmative Action (there is now a case filed against Berkeley), the fact that the department is accountable to administration is meaningless. The possibility of collusion between administration and the department exists in these circumstances. Without accountability to outside parties, such a possibility cannot be seriously discounted. For example, the department at one point argued for the hiring of a man on the basis of "prior" commitment. The administration said that such a reason was not acceptable. The faculty merely had to conduct a new vote, now assessing the candidates purely on the basis of "merit" and send the same file back in order to gain administrative approval. Once the "paperwork" has been formalized, no legal or administrative basis for complaints about the validity of prior commitments could be ascertained.

Further, as long as debates within the department are not reported, it is relatively easy to make a strong case for any decision which is ultimately reached. The administration has no basis on which to evaluate and decide otherwise. (Or when supporting materials are sent to the administration, they do not become available to the Academic Senate's Committee on Affirmative Action; hence there is no interested, advocate witness to decisions.) In addition, there are no requirements within the U.S. Berkeley Affirmative Action Program for administrative review of vitae and qualifications of candidates who were *not* selected. Therefore, the procedures currently exclude a way for the administration or an internal advocacy group to be assured that Affirmative Action candidates (of relatively equal merit to non-Affirmative Action candidates) were not unfairly judged.

Within departments, there may be even more subtle and more interesting forms of bias. One such appears in the use of language. As one respondent noted, in discussions about white men one often gets inflated descriptions such as "the best in the field", "superb", "perhaps a genius". But women and minorities are usually discussed in more cautious and realistic terms—"solid", "well-trained", "quite sound". And their weaknesses are more likely to be emphasized. "She is strong theoretically, but weak when it comes to empirical research." And so, simply in the terms of discussion, the men *appear* to be the stronger candidates to those who want to maintain excellence. Women and minorities are automatically ranked on all possible criteria; men tend to be evaluated mainly in the area of their strength.

Another issue is the willingness of the department to fight. In the current tight market and with declining enrollment quite common, many departments will often find they do not have an empty position waiting. The administration may use all available positions wherever departments do have candidates. One consequence of this situation is that a departmental committee can go to administration and say, "We have a candidate and want a position" when the committee members care to do so. Conversely, they can explain inability to hire women and minorities by pointing to the hard facts of life: no empty slots are available—and none expected in the near future. (Nevertheless, there are two new white men in tenure-line slots.) There is no way to judge the validity of these "hard facts" in any one instance; for the department can always argue that any obstacle to hiring comes from the administration. The chance to avoid responsibility and play "good guy" to the administration's "bad guy" is always an option when confidentiality of personnel committee negotiations is given high priority and secrecy in negotiations between the administration and the department results.

Given this confidential relationship between the administration and the department, the departmental spokesmen's claim that it is almost impossible to know for certain if slots will be available cannot be assessed. Similarly, the departmental claim that it is, of course, improper to make a wide search for candidates under these conditions cannot be evaluated. But it is clear that this view of the situation provides an inside track for any who are hired in non-AAP positions; but who happen to be on the scene when positions become available, and who are strongly favored by powerful spokesmen in the department.

CONCLUSION

Investigation by professional organizations is necessary if we are ever to discover the extent of good faith adherence to affirmative action goals by departments. Within the current understandings of departmental autonomy, there is no way to make such assessments; for there is no outside accountability. Recognition of the necessity to develop such accountability systems might lead to professional review boards which could examine the working of AAP, department by department. The work of professional organizations can be expedited by opening the personnel ad administrative files on university campuses to duly appointed representatives of the associations. In this view we are supported by a former chairman of the Department of Sociology who wrote this committee the following: "I am in favor of such reviews as you are conducting, and believe that we should be answerable to bodies such as yours. . . If you can't point to the good chance that there will be a lot of noise if you appoint a white male, then people are likely to return to a "pure qualifications" ideology, and Affirmative Action will have a harder and harder time. . . I'm glad a lot of noise is being made (about this issue), because I think that decisions taken at a high noise level are likely to be only those that are really quite strongly justified. Of course that requires having administrators who don't mind working in the noise, and I hope I'm one of those." Without the ability to review information by outside sources, there will always be doubts about the good faith adherence to Affirmative Action goals by individual departments.

RECOMMENDATIONS TO THE DEPARTMENT

(1) The Department of Sociology at UCB should formulate a definite statement of anticipated teaching and research needs for the coming years. These requirements should be listed in terms of their priority and should be publicized when openings arise.

(2) The Department of Sociology at UCB should adopt an explicit and public policy both at the personnel committee level and at the departmental level towards Affirmative Action. This policy should include explicit goals and timetables based on reasonable estimates of the availability of qualified women and minority applicants.

(3) Membership in the following departmental committees should include graduate students: personnel, academic progress, graduate admissions and awards. Such action prohibits secrecy in deliberations which may later lead to charges of bad faith or inadequate attention to Affirmative Action requirements.

(4) The final deliberations of the tenured faculty on any of the recommendations presented by the above committees should be open to review by accredited members of the appropriate committees within the national and regional sociological associations.

APPENDIX 1

BERKELEY DEPARTMENT OF RHETORIC,
May 23, 1973.

Provost RODERIC PARK,
Chancellor's Office,

DEAR PROVOST PARK: I have recently received further information from senior faculty regarding two hiring cases in Letters and Science. The fact that one of these cases has already passed your review leads me to wonder about the firmness of standards of affirmative action being applied.

1. *Physics department.*—During the fall quarter, the physics department voted on a male candidate in nuclear physics. The department had not been given an FTE yet, they did not advertise the post, they did not make a search, but they took a vote. Many senior nuclear physicists were not present when the vote was taken.

At your behest, the position was announced briefly through the campus paper. When Elizabeth Scott asked to see the search committee summary, she was turned down, so we cannot evaluate the extent of the search. How long and in what places was the position publicized? Was an announcement of the position sent to the women on the roster of nuclear physicists? The total list cannot be so long as to prohibit such total advertising.

The President's affirmative action guidelines of January 5 (as well as national regulations) prohibit age discrimination, but the department officially declared that it was looking for a candidate under forty. This was used as a reason not to consider a woman candidate locally available. Was the chairman told that it is not permissable to make age discrimination official policy?

It may interest you to know that a number of the senior faculty expressed astonishment that the search passed your approval: their astonishment implies that they did not themselves regard the search as meeting affirmative action standards. May we see the search summaries in this case to judge whether their astonishment is merited?

2. *Sociology.*—In recent hiring decisions in the sociology department, two women and a Chicano were turned down. I am particularly concerned in this history with the role of prior commitments.

Several years ago, the department promised a slot to a male, and they have since put another on "hold" in the same way. At a meeting of the Personnel committee, subsequent to the loss of the Chicago candidate, a vote or ranking was made of various candidates for the then available slot. In this ranking a woman candidate with two books, numerous articles, and five years teaching experience was ranked ahead of one of the men to whom a commitment had been made, who was also being considered. She was regarded as having research abilities equal to his, but as superior in the range of courses she could teach. Affirmative action regulations state, of course, that even if they were just equal she should be given preference. It is interesting to note that she was offered, after the vote, a temporary position—but without such future commitments!

When the issue came to a departmental vote, the prior commitment led to prefernece being given to the male candidate, in spite of the recommendation of the personnel committee. Not only was this position given to a male rather than a female, of equal or perhaps superior qualifications, but there are indications that commitments are being made to the other white male in the case which may again tie up future slots and prevent their use for affirmative action.

One of the senior faculty members mentioned this case in a meeting attended by one of my committee members. I have since discussed the case with him, and he gave me the information mentioned above.

In connection with one of the cases I mentioned to you on an earlier occasion, I have been worried about possible repercussions of a negative sort for the women involved. There are at least two cases I know of where women have been effectively blackballed for complaining about the way hiring is being done. The way this happens is that when departments are consulted in connections with recommendations for fellowships or jobs, the faculty tell the person making the inquiry that the woman is an activist, or some other term suggesting she is likely to complain if ill-treated. In one instance I learned about this hazard because a woman on a fellowship committee found that a superbly qualified candidate was very nearly turned down because of such material coming from her department. If women speak or write to you about instances of possible affirmative action problems in their departments, I urge you to protect them from injury by not revealing your sources to the department faculty. In both the cases I am reporting to you now, my sources were male faculty, but it is quite possible that the chairmen will choose to believe otherwise. I just hope you will keep this problem in mind in talking with charimen.

Sincerely yours,

S. M. Ervin-Tripp.

Appendix 2

December 20, 1973.

Chancellor Albert Bowker,
Chanceller's Office,
California Hall,
Campus.

Dear Chancellor Bowker: The first appointment that has been announced since the distribution of FTE for 1974–75 is one that violates affirmative action in spirit and in procedure. I refer to the appointment of ——— to the Sociology Department. Had this record been scrutinized by an affirmative action coordinator I am sure it would have been flagged: it's approval is good evidence of weaknesses in the present system of monitoring appointments.

1. The Sociology Department has been advertising for positions in Chicano studies and in Demography, which have for two years been identified as programmatic needs. *Mr. ——— is a specialist in neither of these fields.*

2. In March, 1971, October, 1971, and Novembers, 1972 the administration made pronouncements requiring affirmative action searches, documentation, and submission of supporting documents demonstrating adequate, complete, searches prior to ladder apponitment submission. *There is no such documentation submitted with the ——— papers.*

3. The evidence on the case strongly suggests that ——— was recruited by the traditional "old boy" letter method, although the recruiting letter was not included, merely referred to. He was given a temporary position, and oral, but apparently not written assurances that he would be taken onto the ladder staff when an opening appeared. Such promises are in clear violation of the affirmative action program. It takes no very elaborate thought to see that tying up future positions by such commitments would foreclose the required searches. That implication was as clear in 1972 as it is in 1973. *Future positions cannot and could not be promised, under the affirmative action program.*

It is interesting to see that the documentation submitted with the records is opaque as to the actual reasons for this appointment. In this, as in other cases, it is imperative to include in the materials the dossiers of the alternative candidates, and information about the choices the department was making. In 1971–72, the department voted that it wanted three candidates which had arrived by various recruiting methods. One of them was in a superior barganing position: the woman was then an assistant professor whereas ——— was still a graduate student. The department sought a way to hire all three. Since the woman required a ladder position, the department gave her the one opening they had, and the two men were put in temporary positions with oral assurances they would get the next ladder openings.

One of the two men has a rather complicated history, in that he had been offered regularization proceedings in 1971, but was required to return to his country for reasons beyond his control. For this reason further action was suspended, and the department promised to take the case up later. The history of this case is longer and more complicated than ——— case, which is one of transparent preferential treatment.

It is interesting to speculate, given the long evidence we have on treatment of lecturers in this as in other departments, on what would have happened had the sexes of ——— and ——— been reversed. It is unlikely that such promises would have been made. Indeed they were not made to a woman lecturer voted by the Personnel Committee more qualified than ———, according to reports, not the written record.

This particular case is a violation of affirmative action. Mr. ——— did not fit the specifications for the positions sought. He was put in his position purely because the department made a private arrangement in violation of the requirements of open search. There are not any of the required documents showing a good faith genuine search to fill a specified position. In all of these respects the ——— case is evidence of poor control by the "Affirmative Action Officers" over affirmative action. The filling of all ladder positions is supporedly covered by these requirements. This is the first exception to be made this year. I hope you will be alert to avoid others, since they are public testimony to the inadequate implementation of the program, and have a demoralizing effect in the departments concerned.

Sincerely yours,

S. M. Ervin-Tripp,
Committee on the Status of Women and Ethnic Minorities.

Appendix 3

Berkeley: Office of the Dean,
College of Letters and Science,
January 25, 1974.

Prof. Susan Ervin-Tripp,
Department of Rhetoric.

Dear Prof. Ervin-Tripp: I reply to your letter of 20 December to Chancellor Bowker about the appointment of ——— to the Sociology Department. This appointment was made on the basis of a commitment which goes back to 1971 and thus antedates the Affirmative Action guidelines which did not appear until December 1972. I believe you have already seen the documentation on this case. This documentation shows clearly that the case went to the Budget Committee in February 1972 and received their approval. Unfortunately, at that time there was no FTE available and so the appointment had, in effect, to be postponed until an FTE became available. The matter has been carefully examined by the Administration, including Chancellor Bowker, and all agree that the appointment of ——— is the result of a sequence of events initiated before the present Affirmative Action search requirements were in effect.

I now turn to some of the specific points in your letter. The appointment of ——— does not come from the FTE available for 1974-75 as you state in your first sentence. It was an extended authorization of an FTE which the Sociology Department had for recruitment during the academic year 1972-73. The advertisements that the Sociology Department made for positions in Chicano Studies and Demography are in response to long-felt needs in the Department. In neither case have suitable candidates appeared. The Department is following Affirmative Action guidelines in these searches. I cannot emphasize too strongly that Affirmative Action is now strictly applied to all new appointments.

The Department of Sociology has been very eager to provide appointments for women and minorities. Their efforts long antedate Affirmative Action. The first woman was appointed in 1966 and the first Black in 1967. The Department has been notably successful in attracting Black and Chicano students, many of whom have been placed in good positions all over the country. The Department is continuing its efforts in this direction.

Sincerely yours,

Roderic B. Park,
Provost and Dean.

Berkeley: Department of Rhetoric,
February 6, 1974.

Provost Roderic Park,
Chancellor's Office.

Dear Provost Park: In reply to your letter of 25 January regarding the appointment of Mr. ————, let me review the three objections which I made: (a) Mr. ———— is not a sepcialist in either of the fields in which the department was recruiting and was authorized to recruit; (b) There were requirements for affirmative action searches as early as March, 1971, but no such required documentation was submitted in this case; (c) a future commitment had been made which foreclosed possible affirmative action hiring.

1. The Higher Education Guidelines require that an employer articulate the criteria by which appointments shall be made, to prevent arbitrary and discriminatory employment decisions. While neither the minimal or ideal criteria for these positions are explicitly defined by the Sociology Department, we can assume from their advertising that at least a minimum criterion was significant publications in demography or Chicano research. To my knowledge, there were candidates who met those criteria. Have you examined their dossiers in order to evaluate whether -------- in fact was better qualified by the department's professed criteria? As the line officer responsible in this case for affirmative action it is hard to see how you could recommend this appointment without making sure some qualified minority or female demographers or Chicano specialists were not being overlooked. If you don't make this affirmative action check, who will?

2. You state that "this appointment was made on the basis of a commitment which goes back to 1971 and thus antedates the Affirmative Action guidelines which did not appear until December 1972."

The laws requiring affirmative action in federal contractors go back to 1968 and the courts have awarded back pay back to that time to women and minority litigants from universities. By March, 1970, department chairmen were told to conform to those regulations. They may have been ill-informed about them, but ignorance of the law cannot excuse them. In March, 1971, Vice-Chancellor Raleigh required that departments "demonstrate that for every new appointment proposed an adequate search has been made for possible women appointees. Such a search should also encompass a review of women currently holding non-ladder appointments on the Berkeley campus." In October, 1971, he elaborated these requirements further.

These requirements are included in the report to H.E.W. as evidence of the university's long-standing commitment to affirmative action. How can you account for the failure of the department to include, or the line officers to enforce inclusion, of affirmative action search evidence in the ---------- materials?

I am glad to hear that the Department of Sociology is very eager to provide appointments for women and minorities. In our report of 1970 we pointed out that at that time there were no women in the department, although a quarter of the Ph.Ds were going to women in the top five Sociology Departments. They had hired the last ladder woman in 1925. According to your own figures, they still rank among the top quartile in underutilization of women; we do not yet have figures for minorities.

While the future good efforts of the department are to be applauded when they occur, appointments are few and far between, and there is no slot allotted to Sociology for next year. The women and minority men who responded to the departmental advertisement, and who are better fitted to those specialties advertised than is Mr. ------, have a legitimate grievance. Where do you recommend that they turn for a remedy?

In summary, the evidence suggests that:

a. The criteria put forward by the department are not met by the candidate appointed. No line officer required to protect affirmative action has examined the alternative candidates to see if there were qualified candidates in the specialties sought.

b. The laws requiring affirmative action, and even the campus directives, antedate the initial appointment.

c. None of the required documentation pertaining to the search for the authorized positions and the candidates' relative qualifications was submitted.

d. There is no apparent grievance procedure available to the candidates whose rights have been violated.

Sincerely yours,

S. M. ERVIN-TRIPP,
Chairperson, Committee on the Status of Women and Ethnic Minorities.

APPENDIX 5

BERKELEY: OFFICE OF THE CHANCELLOR,
March 17, 1971.

To: Deans and department chairmen.

There is much concern now that the American universities are discriminatory in their appointment and advancement procedures regarding women. Both conscious and unconscious factors have been cited and adduced. The law of the land states and the policy of the University of California affirms that there be no discrimination by sex in employment. The fact, however, that charges of such discrimination exist makes it clear that the burden of proof lies on the University itself. Accordingly, it is now requested that Departments demonstrate that for every new appointment proposed an adequate search has been made for possible women appointees. Such a search should also encompass a review of women currently holding non-ladder appointments on the Berkeley campus.

JOHN HENRY RALEIGH,
Vice Chancellor for
Academic Affairs.

APPENDIX 6

BERKELEY: OFFICE OF THE CHANCELLOR,
October 7, 1971.

To: Deans, directors, and department chairmen.

This memorandum concerns (a) the University's expressed dedication to equity in the hiring practices for academic personnel, and (b) the internal study committees' and the relevant outside agencies' demands for proof of compliance.

Understandably, then, certain mandatory requirements must be observed, effective at once.

1. When a new appointment is proposed, the initiating unit must provide documentation showing that the search for the person finally recommended has included a survey of qualified candidates who are women and who are members of ethnic minorities. (In the past, separate reminders have been sent to the campus stressing the importance of increasing our ratios in the employment of women and Blacks; this memo also emphasizes the need actively to seek qualified Chicano, Native American, and Asian American candidates.)

2. In addition, it is most important that all departments keep full and accurate records on all their hiring practices. We must have a complete factual account of all persons considered for any faculty position, with the reasons why one was finally chosen and the others were not.

3. At the same time, the University will continue to evaluate all its faculty members in its traditional manner. Presumed excellence in teaching, scholarship and service will be expected for entry, and certified excellence in these categories will be required for tenure, irrespective of sex or ethnic origin.

JOHN HENRY RALEIGH,
Vice Chancellor for
Academic Affairs.

AMERICAN ASSOCIATION OF UNIVERSITY WOMEN,
Woodland Hills, Calif., September 20, 1974.

Hon. JAMES G. O'HARA,
Chairman, Special Subcommittee on Education, House of Representatives, House Office Building, Washington, D.C.

DEAR CONGRESSMAN O'HARA: The California State Division of the American Association of University Women, representing over 30,000 members, firmly supports the concept of affirmative action programs to help bring women and minorities into equality in education and employment programs.

We support the goals of:

1. Equal opportunity in education, training, employment, housing, credit, mortgage funds and insurance.
2. Elimination of discrimination based on sex, race, color, creed, national origin, marital status or age.
3. Equal opportunity for women in all aspects of life.

Affirmative Action Programs have been a major step toward meeting these goals and we urge you to continue to support and extend them.

Sincerely yours,

SHARON SCHUSTER,
Legislative Program Chairwoman.

STATEMENT BY CHARLES FRANKEL, OLD DOMINION PROFESSOR OF PHILOSOPHY AND PUBLIC AFFAIRS, COLUMBIA UNIVERSITY

I am grateful for the invitation to submit my views on the question of compliance with civil rights laws as it affects universities, and also on the methods used by the executive branch in recent years, particularly the Department of Health, Education and Welfare, in determining a college or university's eligibility for federal funds.

I speak for myself and not as a representative of any organization. However, as a member of a university faculty I have seen some of the effects on my own university, and as the chairman of the International Committee on the Future of the University, I have been in a position to observe events and tendencies on numerous campuses and to compare notes with many colleagues, administrators as well as professors.

I have also had an opportunity, as Assistant Secretary of State for Educational and Cultural Affairs (1965–67), to look at these matters from the governmental side of the question, and I would stress, at the beginning, my sympathy with the objectives of the civil rights program and my sense of affinity with the people in government who have the delicate and difficult task of attempting to move the nation ahead on the path laid down by the Congress and the Supreme Court.

The beginning of wisdom in the approach to these problems, in my opinion, is to make a distinction between the issues posed by the situation of blacks and other long-disadvantaged minorities, and those posed by the situation of women. In the latter case there has been, I believe, a considerable, though largely unconscious, prejudice against having women on the faculties of large universities. Somehow, without thinking much about it, the assumption was simply made that college and university teaching would be attractive only to a small number of women and that these would find positions in colleges for women. It must be added that most women accepted these assumptions, and only occasionally gave evidence that they found them mistaken or burdensome. Broadly speaking, and despite current rhetoric, the situation was not on which deserves to be described as "oppression." However, there can be no doubt that unmeasured valuable talent was lost to higher education in consequence, and that social attitudes have now changed fundamentally. Prejudices against women in universities cannot be permitted to continue.

The basic question is the appropriate remedy. I believe that the old prejudices were largely unconscious. I believe that the conscious effort to overcome them is now massive. More and more women are entering graduate schools and choosing academic careers. In not more than five or ten years, I would expect that the faculties of major universities, with or without the benefit of legislation, will be composed of women in numbers approaching 35–50 percent. This will happen in the natural course of events, now that psychological attitudes among both men and women have changed; I also hazard the guess that there will be a certain amount of leaning over backwards to make it happen.

It would be a great mistake, I believe, under these circumstances, to assume bad faith on the part of university faculties on this matter and to impose bureaucratic supervision upon them. Nothing could be at once more comic and more insulting, for example, than to have visitors from Washington treat the cosmopolitan members of my own faculty at Columbia as though they were harboring deep designs to keep women out. Such intervention is bound to be heavy-handed and will aggravate the already difficult problems of transition to the new situation in a period of acute job shortage. Many male graduate students believe they are being unjustly denied jobs. Many women of first-rate quality who would be members of our faculty in any case resent the imputation that they are there only because they are women and that they are second class. In periods of acute job shortages it is particularly important to avoid tight bureaucratic regulation. Even in the best of times such regulation is to be avoided in universities unless an otherwise incurable situation exists.

In brief, the situation with regard to the recruitment of women on university faculties is well on the way, in my judgment, to complete and satisfactory resolution. What makes it difficult is essentially the job shortage. The imposition of "guidelines" has really been, in practical effect, an imposition of quotas. One of the principal consequences is to give a good and sensible cause, which is in the process of succeeding, an unnecessarily bad reputation.

When we turn to the question of blacks and other groups, the situation is more complex. The pool of available talent among blacks for the teaching of physics, mathematics, foreign languages and the like, is extremely limited. By introducing special programs for blacks and other such groups at the college level, this situation can presumably be rectified to some extent. However, progress is inevitably slow and considerable time is required. It must be remembered that the source of the problem is the woefully inadequate education that blacks receive in primary and secondary schools. The colleges cannot do more than pick up the pieces at the end of this process and do a minor mending job.

The temptation under these conditions is to substitute tokens and symbols for realities. It is possible quickly to increase the number of blacks and others on university faculties not by improving educational opportunities but by making degrees easier to receive. In these circumstances, either the tone of the entire higher educational system is lowered, or a double standard is introduced, so that blacks are treated effectively as a privileged category. That this has happened in many places will be admitted, I am persuaded, by every informed and candid observer. The damage is threefold. Blacks, no matter how gifted, become once again second-class citizens on campuses. Bitterness and racial hostility is encouraged. Last and not least, intellectual disciplines are treated with contempt, as though nothing important was lost when levels of competence in fields like chemistry or medicine were lowered. Few of us would wish to reduce the level of competence in professional football or tennis by introducing guidelines concerning proper ethnic representation. Are mathematics and medicine less important?

These opinions do not mean that I am opposed under all circumstances to the imposition of guidelines and targets. If a pattern of deliberate and persistent racial discrimination can be shown, if the number of qualified minority group members can be easily increased with proper measures, and if the jobs for which they are being trained are essentially interchangeable, there is a strong case for programs like the Philadelphia Plan. However, in colleges and universities teaching is a highly individual affair and when an opening on a faculty occurs the job description is highly individualized. The guidelines ntroduced by HEW would be appropriate for mass production industries. The pressures that are making colleges and universities mass production industries are already considerable and the strongest and most imaginative efforts are required to retain the distinctive values of higher education under these circumstances. I fear that the continuing operation of HEW guidelines will be the straw that breaks the camel's back. In the name of racial amity we will create racial disharmony. In the name of better education for all we will introduce the methods of mass production. The worst sufferers will be students of all races, and the parents and taxpayers who foot the bill.

UNIVERSITY OF CALIFORNIA, LOS ANGELES,
September 20, 1974.

Hon. JAMES G. O'HARA,
Chairman, Special Subcommittee on Education, House of Representatives, Congress of the United States, Cannon House Office Building, Washington, D.C.

DEAR CONGRESSMAN O'HARA: My thanks for your kind invitation to submit material for possible inclusion in the record of your subcommittee hearings.

The enclosed tables give data on the 1973 salaries of college and university faculty members, and then of doctoral professionals generally, broken down into the broad racial categories of "white," "black," and "Oriental." This particular segment of the labor force was chosen for study primarily because important *qualitative* measures of differences are available in these fields. In particular, the quality of individual's training can be ranked according to rankings given by members of their respective professions, as recorded by the American Council on Education. For faculty members, there are also records of the extent of their scholarly publications, as listed by the individuals themselves. The data compiled from the National Academy of Sciences study also permit rankings of the quality of each individual's degree and an age breakdown, as an approximate indication of experience.

The most striking fact to emerge from these data is that "average" differences between groups represent the effect of the different *distributions* of these groups among fields, degree quality, publications records, etc., rather than simply racial or ethnic differences as such. For example, Table 1 shows white faculty to average $627 per year higher than black faculty, but within the cells—holding degree quality and publications constant— blacks earn more than whites more often than not. We are still in the process of compiling data on women, but existing studies already indicate that women are distributed very differently than men with respect to fields of specialization, kinds of employing institution, etc. Like minorities, women tend to be distributed toward occupations which feature lower pay—for example, the humanities rather than the natural sciences, colleges rather than universities. For women, our data will need to hold constant the years of continuous professional employment—a crucial variable on which there are major differences between the sexes. With women, as with minorities, internal breakdowns are often very revealing as to specific reasons behind intergroup differences. For example, studies of academic women show that in many respects the main differences in pay, promotion, publication, etc., are between *married* academic women and all others. Single academic women are much closer to academic men than the married academic women. This is lost sight of in most comparisons of "women" in the aggregate versus "men" in the aggregate.

Another pattern of great importance is the difference in black-white salary by *age*. Table 2 shows older blacks to be earning less than their white counterparts in comparable degree-quality cells, while younger blacks earn more than their white counterparts in each cell. This may well reflect the difference between the more restricted educational and employment opportunities of the past, as reflected in the current position of older black doctorates, versus the better education and increased opportunities available to the younger blacks whose careers have been moulded in more recent years. A pioneering study by Professor Finis Welch in the *American Economic Review* (December 1973) showed significant differences by age bracket in black-white earnings ratios for persons with comparable educations—and this not restricted to professional or academic fields.

A more general way of looking at all of this is that it is not enough to say that discrimination has occurred to justify the sweeping conclusions and sweeping procedures of the so-called "affirmative action" programs. The *locus* of the discrimination is also important—whether it is past employer discrimination and the discouragement of preparation caused by it or current discriminaton among equally prepared individuals, whether it is due to educational discrimination and its continuing consequences in career choice, whether it is due to social stereotypes, home values, etc.

The longer run consequences of "affirmative action" is a sobering subject requiring more time and space than is appropriate here. I hope the enclosed data will help toward putting the discussion on a more factual basis.

Sincerely,

THOMAS SOWELL,
Professor of Economics.

TABLE 2.

SOURCE: 1973 Survey of Doctoral Scientists and Engineers
National Research Council, National Academy of Sciences

STATEMENT OF JANET WELSH BROWN, OFFICE OF OPPORTUNITIES IN SCIENCE, AMERICAN ASSOCIATION FOR THE ADVANCEMENT OF SCIENCE

As Director of the Office of Opportunities in Science of the American Association for the Advancement of Science I want to offer to the Special Sub-Committee on Education some of my experience that testifies to the importance of affirmative action regulations in achieving equal opportunity for women and minorities, including minority women.

The Office of Opportunities in Science is part of the AAAS, a huge professional association which has more than 126,000 members and 283 affiliated societies and state academies of science. As part of our responsibility for increasing the numbers and improving the status of minorities and women in the sciences, we have had ample opportunity to see how affirmative action works. After two years of experience in trying to achieve equal educational and employment opportunities, I am very firmly convinced of the necessity for strong affirmative action regulations and enforcement.

This office receives literally hundreds of requests for information on minority and women scientists, not only from prospective employers but from leaders in science who seek to include women and minorities in their committees, symposia, research and other professional activities. I can assure you from working extensively with these gentlemen that the likelihood of most of them making such efforts without the pressure of affirmative action regulations is nil. Most caucasian men of science have little awareness or interest in the problems. If this were not so we would not have so disgraceful an underutilization of women and minorities in U.S. science.

Without federal leadership the situation has actually worsened over the years. The enclosed chart shows that *the percentage of women doctorates graduated in the 1920s was higher than that of the 1960s in all fields.* Likewise, *the percentage of black doctorates decreased in the decade of the 1960s*—a decade remarkable for its educational and scientific expansion, and presumably of progress for black Americans.

Recently the professional societies have established commissions on the status of women and/or minorities in the profession. Every one of them reveals the same pattern: the women and minorities receive proportionately fewer admissions and fellowships to graduate school; they seldom get the choice post-doctoral appointments; they are found in greatest numbers in the lower ranks, in the less prestigious institutions, carrying the heavier course loads, enjoying fewer benefits and less security. They are paid less than men in every field. It is quite clear that the very persons who attack the principle of affirmative action are the very persons who built and would perpetuate this terrible record.

I can further testify from direct and extensive experience that the "top men in the field" do not know "all the good people in the field" and that "qualified" women and minorities *do* exist—contrary to the allegations of Professor Richard Lester in his latest, most unscientific publication on affirmative action, *Antibias Regulation of Universities.* Time and again I have brought to the attention of such people the existence of highly qualified minority and women scientists with specific areas of expertise. These women and minorities tend to have been overlooked by their employers, colleagues, editors and professional societies in which they have played only a token role. They are often not listed in the prestigious *American Men and Women of Science.* Most academic administrators do not know of their existence and would not be looking at all were it not for the federal affirmative action requirements.

Please do not allow the Sub-Committee to be used for an attack on affirmative action, the most positive and intrinsically American concept to be developed in a long time. "Reverse discrimination" is a bogey man thought up by men who have guilty consciences and feel threatened. Never has a case been proven. It is hard to find jobs these days in many fields and unscrupulous employers are sometimes not above using "affirmative action" as an excuse for not hiring men they would not have hired anyway. The unemployment rate for women is still higher than for men in all the sciences. They and the minority professionals must not once again be made to bear the brunt of national economic difficulties under the guise of non-existent "reverse discrimination."

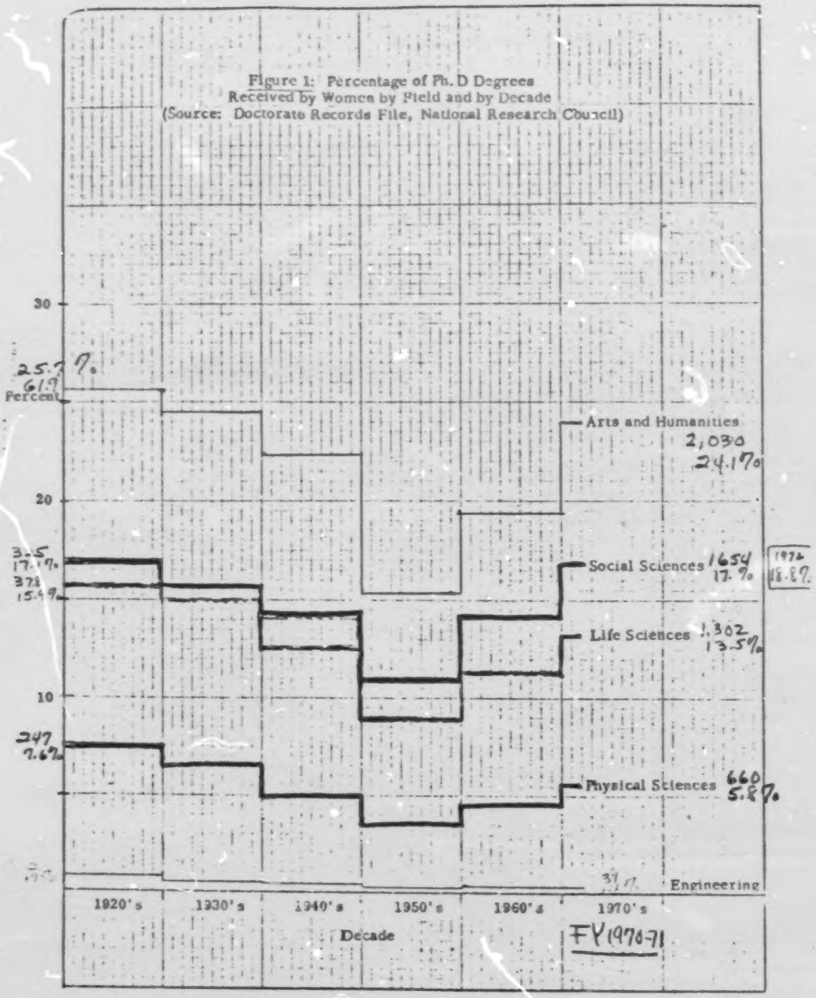

Figure 1: Percentage of Ph. D Degrees Received by Women by Field and by Decade (Source: Doctorate Records File, National Research Council)

TESTIMONY BY LILLI S. HORNIG, EXECUTIVE DIRECTOR, HIGHER EDUCATION RESOURCE SERVICES, BROWN UNIVERSITY

Mr. Chairman and Members of the Subcommittee: I am most appreciative of the opportunity to present my analysis of the impact, effectiveness, and administrative problems of Affirmative Action programs in postsecondary institutions to this distinguished Subcommittee. This is particularly true because my views are seriously at variance with other testimony furnished, for example, by Ms. Lucy Sells; I intend to present evidence to amend that record.

My own concern with the employment problems of academic women dates back many years to when I first became a member of a university faculty. I have been in constant touch with these problems since then, as a senior faculty member and department chairperson, as Executive Director of Higher Education Resource Services at Brown University, and as Chairperson of the Committee

]

on the Education and Employment of Women in Science and Engineering of the Commission for Human Resources in the National Research Council. My overview of the field has been broad in all these activities, and I have an intimate knowledge of faculty hiring practices. My concern with the employment problems of academic women has become much more intense during the last two and a half years while I have directed Higher Education Resource Services. The prime charge of this office is to expand and improve the employment opportunities for women in academic careers. In the course of this work we have dealt with the faculty and administrative personnel needs of well over two hundred institutions of higher education, about one-tenth of the total number in this country. They represent nearly every state and certainly every type of institution—public, private, sectarian, community colleges to the largest universities, and include almost all of the "elite" institutions. We have thus gained some unique insight into the hiring practices of a group of colleges and universities which, because they are so varied and include nearly all of the large state systems, constitute perhaps half of the total higher education effort. This unusual overview has led us to a number of conclusions concerning the necessity for and effectiveness of Affirmative Action programs.

Let me comment first on the need for these programs. There is solid evidence that without a legal mandate forcing postsecondary institutions to provide equal employment opportunity for women as well as minorities, no such efforts would have been undertaken. The proportion of faculty posts held by women had dropped steadily from the 1920's until 1972; even during the 60's, the decade of great expansion of faculties, opportunities for women decreased. In the past few years a great many professional societies and a large number of universities have established commissions on the status of women in the various professions and on faculties; without exception, their studies demonstrate shocking underutilization of highly trained women. Not only are women underrepresented on faculties in relation to their presence in the doctorate pool, but they are predominantly hired at lower ranks and denied opportunities for advancement. At leading universities at most 2–3% of senior faculty are women, although women in the relevant age groups earned 15–20% of the doctorates. Unemployment among women PhD's is significantly higher than among men.

Only a year ago the American Council on Education studied the salaries of men and women on academic faculties and found that, averaged across all institutions, all ranks, and all disciplines, women were paid 17% less than men; the differential was considerably greater in some institutions.

For many years, educational institutions also acted deliberately to deny women access to the advanced training which would prepare them for faculty positions and other professional careers. Law and medical schools maintained strict and disproportionately low quotas for the admission of women; graduate schools discriminated against them in admissions, fellowships, and support services such as career development.

It is difficult to believe that these problems existed as part of the natural order of things; they were created by the deliberate exclusionary policies of the institutions. It is equally difficult to believe that these glaring inequities and the attendant shocking waste of human— and financial —resources would have been corrected by voluntary action on the part of the institutions.

The reason for my skepticism on this score is that the administrations and senior faculties of most major institutions have vigorously resisted implementation of Affirmative Action plans, either overtly or covertly. Their objections have rested on two types of arguments: (1) that the selection and promotion of faculty members is traditionally conducted by a system of peer review within the profession, is based exclusively on merit, and is therefore non-discriminatory by its very nature, and (2) that the requirement to hire women and minority candidates in proportion to their presence in the relevant labor pools is based on an industrial model not applicable to the academic environment and will result in a reduction in quality of faculties.

Both of these arguments are open to very serious question. While it is true that the traditional faculty selection system of peer review is based on merit, the people who are seen to posses merit have been almost exclusively white males; women and minorities were by and large simply excluded from consideration on the basis of sex or race, without regard to merit at all. In fact the operation of this system has been more like that of a private club than of truly professional selection: the people who were eligible for consideration on merit had to possess prior qualifications of race and sex. The system has long been known succinctly as the old-boy network. In practice it meant that when a faculty appointment was to be made, the senior members of a department would inquire of their friends in other institutions who their "best man" was; a short list of candidates resulted, and from it the man who best fitted the particular requirements of the position was chosen. It should be pointed out that this process discriminated not only against women—who would nominate a woman when asked who his best man is?—but it also discriminated strongly against men who were not already at prestige institutions. Prior to World War II it discriminated almost totally against Jews.

The important point to bear in mind about the academic profession is that traditionally it has not been one which granted open access to all aspirants. Rather, membership was by invitation only. At least at the leading institutions, the ones who set the pace for the whole profession, no positions were ever openly advertised and no search procedures were carried out in public. Likely candidates for future academic careers were identified by their professors in graduate school, and ultimately recommended by them for suitable academic openings. At later stages in their careers, the protegees of already prominent professors were invariably the ones appointed to the best positions. Women and minorities were never members of the club, either in graduate schools or later, and therefore had virtually no access to faculty careers. If they were hired by colleges and universities at all, it was by relatively low-prestige institutions and in inferior positions, and they had to beg for employment in a field where jobs were conferred on their male white colleagues by a "grace and favor" system.

The second argument of the opponents of Affirmative Action, that the requirement for setting hiring goals in proportion to the presence of women and minorities in the relevant labor pool (the doctorate population in a given field) will result in a reduction in quality, is as invalid as the first. Indeed, there is every reason to believe that the opposite is true. The reason for this is that just because of previous discrimination, which imposed much stricter criteria for admission to and successful completion of advanced training on women than on men, the women were more highly selected. On the average, then, those women who do complete advanced training would be expected to be *more* able than the average male PhD, and indeed a number of studies substantiate this fact.

The actual implementation and administration of the Affirmative Action programs designed to remedy the problems I have outlined have given rise to a good deal of controversy which is the basis of the present hearings. On the one hand there have been charges of inefficiency, ineptitude, inconsistency, and unwarranted interference with intra-institutional affairs against the Office of Civil Rights in HEW and the various regional branches. On the other hand there have also been charges of continued discriminatory practices, unresponsiveness, evasion, and general foot-dragging on the part of universities. I would like to comment on these points in some deail, based primarily on evidence obtained by our office since 1972.

It is certainly true that the administration of the Higher Education Guidelines by HEW regional offices has been often inconsistent, generally inefficient, and sometimes inept. The administrative history of *all* legislation and regulations prohibiting sex discrimination (Title VII of the 1964 Civil Rights Act, the 1971 amendments to the Public Health Service Act, the Equal Pay Act, the Education Amendments Act of 1972, Executive Order 11246 as amended, and Revised Order No. 4, in addition to the Higher Education Guidelines) has been marked by delay, inaction, confusion and simple non-enforcement. A nationwide class action complaint on grounds of sex discrimination was filed against all colleges and universities by the Women's Equity Action League in January 1970, and similar charges were brought against Harvard University by the National Organization for Women at that time. In April of that year a compliance review was begun at Harvard, the first to be conducted anywhere, thus making it a landmark case. More than three years later, in July 1973, Harvard finally submitted an Affirmative Action plan which was eventually accepted by the Regional [illegible] Rights Director in November 1973.

Such protracted delays have been typical of both the administration of sex-discrimination regulations by HEW and of the responses to complaints and compliance reviews by academic institutions. HEW Regional Offices have typically been sloppy in following their own procedures, often neglecting to notify an institution when a complaint is filed and giving insufficient notice of impending compliance review. There is no uniformity whatsoever among the Regional Offices in setting standards for the kinds of information institutions must furnish either during compliance reviews or in Affirmative Action plans. When an institution does file a plan, it frequently receives no written response whatever—either acceptance or rejection or even a Letter of Findings. A case in point is Brown University, which filed an Affirmative Action plan with the

Region I office in April 1972, following a compliance review. Since then the University has received one letter from that office, requesting clarification of certain data. This was provided, and as of two and one half years later, no further written communications have been received by the administration.

At last count, something under 1% of all the colleges and universities in the country have received formal acceptance of their Affirmative Action plans—a full two years after the Higher Education Guidelines went into effect, and nearly five years after the first sex discrimination complaints were filed. Indeed, less than 10% of *all* the institutions of higher education have even filed Affirmative Action plans. The great majority clearly do not intend to do so until compelled.

It is my understanding that during the past year the Office of Civil Rights has been reviewing its enforcement procedures and intends to issue a uniform set of guidelines shortly.

That enforcement has been slow, haphazard, and inept is only one side of the coin, however. The other is that institutions have on the whole been evasive and uncooperative, with the exception of a shining few who voluntarily filed Affirmative Action plans. The majority have not bothered to educate their faculty and middle-level administrators in the requirements of and necessity for Affirmative Action, yet it is just these people who make most of the hiring decisions. In working with faculty members and search committees, it has been the experience of our office that once they understand fully what the needs and requirements are, they become much more cooperative.

Since the area of faculty recruitment and hiring is the one with which we are most closely involved, I would like to discuss this in some detail.

To put the overall problem in perspective, it must be pointed out that between 1968 and 1973 the total number of women on faculties increased by less than 1 percent, from 19.1 to 20 percent. Virtually all of that increase is due to hiring at the lowest ranks. No national statistics are yet available on any increase in the number of women at senior or tenure level; in early 1973 our office attempted to survey all of the New England institutions in an effort to obtain such data on a regional basis. Out of a 55% response rate, so many of the replies were evasive or nonresponsive to the specific questions that it is difficult to draw firm conclusions, but the data do suggest that there has been no measurable increase in the proportion of women in senior faculty ranks. In other words, while junior faculty in general continue to be promoted to tenure despite economic pressures on the institutions, such promotions are still rare for women.

Because broader and more open recruitment for faculty is central to providing equal opportunity for women and minorities, and is therefore required for Affirmative Action, most institutions have devoted some effort to adapting their formerly exclusive recruitment procedures to the new necessities. This usually takes the form of designing explicit procedures for defining the position and the *bona fide* prerequisities of training and experience, open advertising, and the actual recruitment, review, and hiring process, together with procedures to monitor each of these steps. However, no procedures ever devised has been without loopholes, and faculty and administrative search committees have, in our experience, been quick to take advantage of these.

Among common abuses are the following practices:

(1) *Misleading advertising of positions*

This involves selecting a desired candidate privately before *pro forma* advertising of the position, and appears to be common. One woman reported to us that she had applied for seventy-two positions advertised in the *Chronicle of Higher Education* within 24 hours of their appearance; *in every case* she received replies stating either that the position was already filled or they were in the final selection process and could accept no further applications. One president of a state college, searching for a new dean, wrote us confidentially asking to review our files of candidates "before we have to go public".

(2) *Late advertising of positions*

An estimated five to ten percent of all the vacancies listed with our office have been received either after the deadline for applications or so close to it that no response was possible.

Very frequently we receive telephone calls a few days or sometimes literally hours before a final selection is to be made by a search committee, asking us to furnish at least one female candidate "because there aren't any on the final list". Such cases nearly always involve major positions, including university presidencies, and the women are obviously requested as tokens. Their chances of selection under such circumstances are nil; the collecting of necessary information about a serious candidate for a major position takes many weeks or months.

(3) Discriminatory treatment of applicants

Hundreds of women have reported that interviewers did not show up at scheduled interviews during professional meetings, or that interviews were scheduled only at times when they had clearly indicated they could not be available. Similar numbers report that they receive no replies at all to applications. One women reported that when she applied for an advertised college administrative position she promptly received a letter stating the position was already filled; in the same mail two of her male colleagues, one which similar qualifications and one clearly less qualified, received letters warmly inviting them for interviews.

Instances of such discrimination, or of similar kinds, have been fully documented in hundreds of legal briefs; most victims of sex discrimination, however, do not have the funds to pursue legal action. It is evident that the advent of Affirmative Action has not yet stopped discrimination; it is also evident that many of the procedures need refining and standardizing. But to those of us who observe the field closely it is equally evident that Affirmative Action on the part of colleges and universities is essential, and that the only way it will be achieved is by strict, prompt, and equitable enforcement.

An argument has been made in some quarters that Affirmative Action data-gathering and enforcement are costing the universities money which might be better spent on hiring more faculty and improving instructional programs. This argument is fallacious in that most of the money spent on researching and designing a proper plan is a one-time expenditure, often results in increased efficiency and therefore savings in general personnel procedures, and could not possibly support such long-term commitments as added faculty and teaching programs.

It is difficult for institutions which for decades and perhaps centuries have renewed themselves only in their own established image to accept a changing order. It is also remarkable that with all the limitations inherent inthe traditional discriminatory faculty recruitment and hiring practices of universities, we have so many excellent institutions. But such practices are no longer responsive to the expressed needs of society, nor will it serve the institutions' own best interest to deprive themselves and their students of the improvement in the quality of education which must result if their faculties draw on the talents of *all* educated people rather than only one half.

I earnestly urge this Subcommittee to continue its own distinguished tradition of support for non-discrimination, and to issue a clear mandate in support of truly equal opportunity for all.

BIOGRAPHICAL NOTE

Lilli S. Hornig is Executive Director of Higher Education Resource Services, a project co-sponsored by the Ford Foundation and Brown University to improve the opportunities and status of women in faculty and administrative posts. She received her A.B. from Bryn Mawr and her M.A. and Ph.D. (Chemistry) from Harvard, where she first became fully aware of the problems of women in higher education. She has taught chemistry at Radcliffe and Brown, and chaired the Chemistry Department at Trinity College, Washington, D.C. Her research interests have focussed on biochemical reaction mechanisms, especially in the action of drugs. She also has a long-standing interest in international educational and technological development, and has served as a consultant to the Agency for International Development and as a member of several Presidental missions to explore scientific cooperation with various countries including the Soviet Union, Australia, South Korea, Japan, and a number of West European nations.

Her sensitivity to the career problems of educated women was sharpened not only by the discrimination she saw her women students encountering and by her own professional experience, but also by her personal problems in maintaining a career while raising four children and following a husband whose distinguished accomplishments made him more mobile than most. The combination of these experiences led her to accept her present post, where she feels she can work to tackle the problems of academic women on a broad front while making use of her knowledge of and insight into the workings of universities.

Dr. Hornig has published a number of scientific papers and technical reports and a translation from German, *From My Life*, (the autobiography of Richard Willstatter), and has written and spoken widely on the status of women in academia. She is a member of several professional societies, a trustee and member of the Executive Committee of the Woods Hole Oceanographic Institution, and chairs the newly appointed Committee on Women in Science and Engineering of the Human Resources Commission (National Research Council).

STATE UNIVERSITY OF NEW YORK AT ALBANY,
Albany, N.Y., September 26, 1974.

Hon. JAMES G. O'HARA,
Special Subcommittee on Education, House Education and Labor Committee,
Cannon House Office Building, Washington, D.C.

DEAR CONGRESSMAN O'HARA: I would like to submit, as part of the factual record for your hearings on affirmative action programs, the enclosed material relating to the State University of New York at Albany. As you may be aware, the program as originally proposed was discriminatory on its face; the aid of outside organizations (principally the B'nai B'rith Anti-Defamation League) was sought, and HEW eventually sustained the majority of the ADL's charges in what had by then become a well publicized case. The detailed record of events at SUNYA establishes beyond any doubt that certain specific features of the program, later admitted by HEW to have been discriminatory, were created at the urging and with the knowledge of HEW's own compliance officer, and enables one to fairly infer that other objectionable features were created at the behest and with the knowledge of HEW.

The SUNYA story begins with a compliance review by HEW in the spring of 1971. The resulting report (enclosed) is uncompromising in tone, and in its insistence that the 24 listed "deficiencies" be remedied. Among these deficiencies were the following items:

Deficiency 6.—There are no minority group Deans, Associate Deans, and Assistant Deans.

Deficiency 7.—Aside from the Dean and Assistant Dean of the School of Nursing—traditional jobs for women—there are no females occupying positions at the level of Assistant Dean or higher.

Deficiency 9.—Minority group underultilization in faculty positions is reflected by the following:

	White	Minority
Professors	279	5
Associate professors	201	5
Assistant professors	250	3
Instructor	91	1
Other	76	13
Total	897	[1] 27

[1] In reply, SUNYA noted that there were 71 nonwhite faculty, and that the figure of 27 included only Negroes and Puerto Ricans.

Deficiency 12.—A review of the new hires in the past 12 months discloses that less than five percent were minority group members. Additionally, many departments have hired no minority members.

Deficiency 15.—Only 20 percent of the new faculty hired during the past 12 months were women. Further, many departments hired no female faculty members.

Mr. Peter Holmes of HEW has testified that goals are supposed to be set on the basis of the current availability of qualified minority members and women. However, in Deficiency 12 above, HEW complains that only five percent of "new hires" the previous year were blacks or Puerto Ricans, when, in fact, only about one percent of doctoral degrees are held by blacks, and an even smaller proportion are held by Puerto-Ricans. Deficiency 15 cites as inadequate that only 20% of faculty hired the previous year were women whereas women hold roughly 13% of all doctoral degrees. While the low proportion of doctoral degrees held by women and minority members is no cause for satisfaction, it is clear that HEW is not measuring underutilization according to the standard suggested by Mr. Holme's testimony.

The minimal conclusion to be drawn from the above list of deficiencies is that any department without a minority member or a woman had better hire one, and that women and minority deans and assistant deans should be appointed at the next opportunity. In January, 1972, I phoned Mr. Thomas Barnette—the author of the list of "deficiencies"—and this is precisely the impression of affirmative action which he communicated to me. For example, I began this conversation by describing myself as one who had long been committed to civil rights but who was troubled by affirmative action policies. In reply Mr. Barnette just asked me how many blacks were in my own department, and upon getting an answer of none, said that if we were really committed to civil rights we would go out and hire a black.

SUNYA's reply to Barnette (dated 6/11/74) committed the University (item 24) to a policy of "one-to-one hiring of minorities . . . [to] affect all of the administrative staff," which meant, according to the Vice President for Management and Planning, that for each non-minority member hired, a minority member was to be hired. There is no evidence that Mr. Barnette ever suggested to SUNYA that this would be improper, and it is very difficult to resist the conclusion that Mr. Barnette and others within HEW not only approved of such measures, but insisted on them. However, when HEW had to adjudicate publicized charges that SUNYA was establishing quotas, the one-to-one policy was one of the specific features of the program for which SUNYA was then rebuked, and it goes without saying that HEW has never acknowledged its own culpability in this matter. (Enclosed as evidence is HEW's correspondence with SUNYA President Benezet.)

SUNYA's reply to Barnette refers (with regard to deficiency 9) to a "newly installed faculty vacancy control system" and to "faculty line allocation and appointment" procedures which will be a "major stimulus to the acquisition of minority members." What this meant—as indicated in other documents all but one of which formed part of SUNYA's affirmative action plan and which presumably were forwarded to HEW—is that a moratorium was declared on the renewal of term appointments so that a pool of lines could be accumulated and then reassigned to departments for the purpose of hiring women and minority members. [To explain the terminology: a term appointment is an appointment for a specified length of time—usually for a term of one, two, or three years, as opposed to a tenure appointment which is unlimited in time. A "line" is simply a position. When a term appointment expires, a line becomes available on which to make a new appointment. Lines usually remain within a given department whether or not a given individual is reappointed, but the administration reserves the right to reassign a line from one department to another as well as to approve or disapprove of the proposed appointment or reappointment of a given individual.] Therefore, a department might not be able to reappoint someone whom it wished to reappoint, but it could retain the line if it had a minority or female candidate to propose as a replacement, a procedure which amounts to firing white males in order to replace them with minority members and women.

There is every indication that the SUNYA administration intended to implement the policies it had enunciated. Having become publicly involved with this issue, I was sometimes contacted by people who were offended by affirmative action policies which they were under pressure to implement, and the general pattern which emerged from such communications was absolutely consistent with officially stated policy. The administration appears to have made its greatest efforts in the areas in which it had relative autonomy; i.e., with respect to non-academic jobs and academic administrative jobs, and some people with direct hiring responsibilities in the first of these areas claim to have received direct orders to fill certain positions with blacks. With respect to academic jobs, pressure to hire women and minority members took the forms stated in official documents; i.e., requiring departments to fill certain positions with women and minority members, and allocating lines to departments on the basis of the race or sex of proposed candidates. In an effort to verify that such policies were really being implemented, I called two deans and inquired about the pool of ten lines which the Vice President for Academic Affairs had stated were reserved for the appointment of women and minority members. In reply, I was shown a computer printout of all lines under one dean's jurisdiction, and my attention was called to asterisks in the margin next to a few lines. These were described as "affirmative action lines" which could only be filled by a woman or a minority member. The other dean confirmed that he too had such a list, and placed the same interpretation on the asterisks.

As a result of the public controversy, pressure to discriminate in favor of women and minority members decreased toward the end of the academic year, and some of the reserved lines appear to have been filled by white males after efforts to find women and minority faculty had failed. However, the policy of allocating lines to departments on the basis of the race or sex of proposed candidates was continued, with the sanction of HEW. But the more important point is that in January 1972 SUNYA fully intended to implement the policies it had enunciated, and, to the extent that it failed to do so, was hindered only by the simple unavailability of women and minority members in certain specialized fields, and by the off-campus pressures which its naively candid policy statements had generated.

In conclusion, perhaps a few words on the climate of opinion at SUNYA during the period of the controversy would be appropriate. While there was much grumbling about the program, most of the criticism I heard concerned the feasibility of the stated objectives, and the bullying tactics of some of those responsible for enforcing the program. Comparatively few faculty were willing to argue forthrightedly that equal employment opportunity did not mean reserving jobs or establishing minimum quotas for minority members and women—much less firing white males in order to replace them with women and minority members. There were even informal discussions on this last point in which several young white male faculty members of new left or new politics leanings argued that it would be proper to replace them with minority members. No resignations were submitted in consequence, but this bizzare detail illustrates the rhetorical climate on the campus during this period. Even after the controversy surfaced as a result of ADL involvement, few faculty were willing to take a public stand against SUNYA's travesty of affirmative action. In a general way, it is still far safer to advocate certain selective forms of discrimination than it is to oppose all forms of racial and sexual discrimination.

While the abuses at SUNYA are clearly the fault of HEW, which demanded and approved of the policies which were put into operation, it is equally true that universities are fertile soil for the growth of reverse discrimination as a remedy for more conventional forms. I think there is a clear need to design programs with this fact in mind, and to eliminate from university affirmative action plans the coercive features (goals and timetables) which inevitably lead to abuses. There is also a clear need to call HEW to account and to insist that its programs be consistent with the laws and executive orders from which it derives its authority.

Thank you for your consideration.

Sincerely yours,

MALCOLM J. SHERMAN,
Associate Professor of Mathematics.

DEPARTMENT OF HEALTH, EDUCATION, AND WELFARE,
New York, N.Y., May 27, 1971.

Dr. LOUIS T. BENEZET,
President, State University of New York at Albany,
Albany, N.Y.

DEAR DR. BENEZET: This letter is to report our findings as a result of the Compliance Review held at your institution on April 13, 14, and 15, 1971. Before recording these items we want to thank you and your staff for the cooperation given to us while the review was in process. We are particularly appreciative of the information and statistical data gathered to conduct the review.

The following deficiencies exist relative to your institution's Equal Employment Opportunity Program:

1. Faculty handbooks and other employee media do not contain the institution's Statement of Policy regarding Equal Employment Opportunity. Nor, was there any evidence found indicating that periodic meetings are held to disseminate the institution's policy on Equal Employment Opportunity.
2. An Affirmative Action Plan has not been prepared in accordance with Section 60–1.40 of the Rules and Regulations issued by the Office of Federal Contract Compliance.
3. Purchase Orders do not contain the contract language as required by Section 202, Paragraphs 1–7 of Executive Order 11246.
4. Advertisements do not carry the tagline, "Equal Employment Opportunity Employer".
5. There is no indication that tests have been validated in accordance with the test validation order issued by the Office of Federal Contract Compliance.
6. There are no minority group Deans, Associate Deans and Assistant Deans.
7. Aside from the Dean and Assistant Dean of the School of Nursing—traditional jobs for women—there are no females occupying positions at the level of Assistant Dean or higher.

8. Under the classified services there are no minority group member Administrators or Professionals.

9. Minority group underutilization in faculty positions is reflected by the following:

	White	Minority
Professors	279	5
Associate professors	201	5
Assistant professors	250	3
Instructor	91	1
Other	76	13

10. Of the twenty-seven (27) minority facutly members listed in Item 9, eighteen (18) are in the Afro-Culture Program.

11. There is a dearth of tenured minority group faculty members i.e. three (3) out of a total of twenty-seven (27). Also forty-three (43) percent of the faculty has tenure. Minority group faculty members, however, comprise less than one percent of the tenured faculty.

12. A review of the new hires in the past twelve (12) months discloses that less than five (5) percent were minority group members. Additionally, many departments have hired no minority group members.

13. Women comprise only eighteen (18) percent of the total faculty. Further, only six (6) percent of the Professors and fourteen (14) percent of the Associate Professors are female. While in the lower level positions females comprise twenty-four (24) percent of the Assistant Professors; thirty-five (35) percent of the Instructors and thirty-five (35) percent are below the Instructor level. Male distribution by job classification on the faculty is as follows:

35% are Professors.
23% are Associate Professors.
25% are Assistant Professors.
8% are Instructors.
8% are below Instructor level.

Female distribution:

9% are Professors.
19% are Associate.
36% are Assistant Professors.
18% are Lecturers.
18% are below Instructor level.

These statistics further indicate that there is a disproportionate percentage of females on the faculty in the lower level positions.

14. Thirty (30) percent of the women have tenure as opposed to fifty-six (56) percent of the men. Only fifty (50) percent, however, of the females with tenure are in the higher level positions while eighty-nine (89) percent of the males with tenure are in these higher classifications. These facts tend to indicate (a) a greater percentage of men are being hired into the Professors and Associate Professor rank than women (b) women are spending a longer time in the lower ranks than men.

15. Only twenty (20) percent of the new faculty hires during the past twelve (12) months were women. Further, many departments hired no female faculty members.

16. It was noted that there were only three (3) minority group members and four (4) females in the salary bracket of $20,000 a year or higher as opposed to one hundred sixty-eigth (168) males in this classification. Hence, less than four (4) percent of the faculty members earning $20,000 or more are women and minority group members.

16(A) There is, in fact, a marked pattern of salary differentials between men and women in nearly all job classifications on the faculty. For example, all male Full Professors are higher paid than women.

17. In the Department of Nursing there are twenty-three (23) female faculty members. Not any of them, however, are Full Professors. It was also noted that there are no male faculty members in this department.

18. There is a dearth of minority group member representation in the Laborer category, Grades 1–6 i.e. five (5) percent. In the higher levels—Grades 7–20, there is only one minority group member and no females.

19. Minority group members represent less than one (1) percent of the Service Workers in the Grade Levels 1–14. There are no minorities nor females in the higher levels of 14–20.

20. In the Protective Service Worker Category there are no females and less than three (3) percent are minority group workers.

21. There is a paucity of minority group members and females at all job levels in the category of Operators.

22. In the Craftsmen category there is only one (1) minority group member and no females out of a total of eighty-three (83) employees.

23. Minority group members and females are conspicuously absent in the Technicians category—especially at the higher grade levels of 21–30.

24. Minority group members comprise less than three (3) percent of the Clerical Workers. Additionally, there are only two (2) at the levels of 7–13 and none are in the classifications of 14–30.

Before a contractor can be found in compliance with the Executive Order, it must make a specific commitment in writing outlining the action it intends to take to correct any and all deficiencies. We are requesting that you submit to us, within 10 days, a letter which will indicate in clear terms the specific steps which your administration will take to correct the deficiencies noted in this letter (except item 2). We would appreciate it if your response would follow the numerical sequence of the stated deficiencies.

It is recognized that the University must first complete its Affirmative Action Plan, and in view of this fact, you may defer submitting your College plan until 30 days after the University submits its plan. However, in the meantime, it is suggested that you begin to gather the essential ingredients for the plan based on the information outlined in Order No. 4.

We are asking that you submit to us in your letter of commitment a full explanation and justification in cases where the salaries of women and minorities are lower than for men and majorities.

Should you have any question or need further clarification on any portion of this letter, please do not hesitate to contact me.

Sincerely yours.

THOMAS W. BARNETTE,
Contract Compliance Specialist,
Office for Civil Rights.

STATE UNIVERSITY OF NEW YORK AT ALBANY,
OFFICE OF THE PRESIDENT
June 8, 1971.

MEMORANDUM

To: Vice presidents, deans, directors, and department chairmen.

SUNY-Albany is one of the test campuses selected throughout the country for Compliance Review in the area of equal employment. We have been visited by officials of the Department of Health, Education, and Welfare to whom we supplied detailed records.

The eventual report from Mr. Thomas W. Barnette of the Regional Office of HEW in New York is of such uncompromising nature that we are enclosing it for each of you to peruse. This is not an academic exercise. The sanctions, as you may know, involve the termination of Federal grants of all types.

We are replying as required and will shortly put together a plan of Affirmative Action. We find not all items listed to be comletely accurate; at several points our position has not been fully described. We will specify those points in our reply. We expect to engage each of you in the difficult work of changing the University's record in minority and women's employment at all levels and classes.

May I ask for your understanding in this matter for which, in turn, I pledge my efforts to face with you the many problems that will be involved. Mr. Barnette and the office he represents expressed understanding that dramatic change overnight is not possible; but definite programs of change will be expected of us in the months ahead.

LOUIS T. BENEZET.

STATE UNIVERSITY OF NEW YORK AT ALBANY,
OFFICE OF THE PRESIDENT
June 11, 1971.

MEMORANDUM

To: Vice presidents, deans, directors, and department chairmen.

Having distributed the Compliance Review letter from the Office for Civil Rights of the Department of Health, Education, and Welfare (New York

Region), we feel it is important for you to be kept informed of our full response on the matter of equal employment status for minorities and women. Therefore I am attaching a copy of our "letter of commitment" which we were required to send back to the Office for Civil Rights within ten days after receipt of their letter.

There will, of course, be much to say and do in implementing these procedures. We will need to work together in countless ways to move forward on the changes which quite literally are going to be required of us.

LOUIS T. BENEZET.

STATE UNIVERSITY OF NEW YORK AT ALBANY,
OFFICE OF THE PRESIDENT,
June 11, 1971.

Mr. THOMAS W. BARNETTE,
Office for Civil Rights,
Department of Health, Education, and Welfare,
Federal Building, New York, N.Y.

DEAR MR. BARNETTE: This letter may be interpreted by the Department of Health, Education, and Welfare as a statement of commitment in response to your letter of May 27, 1971 which was delivered to us on June 4. My colleagues and I appreciated the interchange with you in our office on June 4.

As a general acknowledgement, State University of New York at Albany is aware that employment and status of minorities and women have not been at a satisfactory level. The fact that this is an almost universal condition throughout universities in the country does not affect our commitment to improve. What we can do and how fast we can do it will start with a spirit of resolve. It will by necessity be affected also by our ability both to recruit more minorities and women throughout the University and to arrange the necessary discretionary funding. This last is a critical problem at State University of New York this year. The Legislature and the State Division of the Budget have so constrained us that we anticipate literally no discretionary funds with which to make salary adjustments for 1971–72, and it appears that we will have only limited discretion in filling positions as they become vacant. I cite these circumstances not as excuses for inaction but as fundamental facts of our current economic condition.

With these pre-conditions, we shall move to prepare a plan of Affirmative Action for SUNY-Albany which you are to receive not more than 30 days following the submission of a plan for the entire State University of New York.

This first letter of official reply is, as you have requested, a comment upon each of the items you have listed in your May 27 letter. Where we acknowledge deficiency without qualification, you may assume that such acknowledgement implies a commitment that we will inquire further into the circumstances of deficiencies and work for improvements as part of the forthcoming plan of Affirmative Action.

The balance of this letter follows the itemization in yours of May 27.

1. Comment.—Machinery was established during 1970–71 to disseminate and implement State University of New York at Albany's policy on Equal Employment Opportunity. An all-university committee functioned throughout the academic year to develop and recommend strategies for carrying out this responsibility across the board. This committee met with each Academic Dean to determine the status of minority and female employment in each school, to identify the magnitude of special recruitment efforts, and to urge the development of a plan for affirmative action.

Two other faculty-staff committees were created during the spring semester of 1970–71: one for minority employment, and one for female employment. These committees are working closely with all academic departments and administrative offices to upgrade the recruitment and career development efforts for minorities and women in these units. All three of the above committees will make major inputs to State University of New York at Albany's affirmative action plan.

Minority and female employment have been action items on the agenda of both the Deans and Directors groups and the Conference of Academic Deans—throughout the year. These groups committed all new secretarial items anticipated in the 1971–72 budget to minority employment.

Unfortunately, all those items were deleted from our budget by the Legislature.

Commitment.—Through the Equal Employment Opportunity Committees, the several regular administrative councils, and the University Senate, State University of New York at Albany's policy on Equal Employment Opportunity will be disseminated widely and our commitment and implementation will be reinforced throughout the University during the 1971–72 academic year. Future handbooks and other employee media will contain a statement of policy regarding the Equal Employment Opportunity Program. An addendum to the present handbook will be distributed reflecting the Equal Employment Opportunity policy. There will be periodic feature articles in the University campus newspaper, *The Tower Tribune*, on the Equal Employment Opportunity policy.

2. Comment.—An Affirmative Action Plan will be submitted 30 days after the plan of the Central Office of the State University of New York has been submitted.

3. Comment.—The State University at Albany is one of many state agencies required to purchase under the General Specifications of the State Office of General Services. These specifications are provided to each contractor and include the general statement regarding the seller's responsibility for compliance with the anti-discrimination clause of these General Specifications. Standard State purchase order and voucher forms are used.

Commitment.—Effective immediately, vouchers and purchase orders for services and/or goods released directly to the vendor by this University will be stamped with a statement referring to the anti-discrimination clause of the General Specifications.

4. Commitment.—Personnel who deal with the news media will be instructed by letter that the inclusion of the statement, "Equal Employment Opportunity Employer," is to be included in all advertisements recruiting employees or soliciting services. This requirement will be included in the University's Affirmative Action Plan.

5. Comment.—The Department of Civil Service, State of New York, has statewide responsibility for State employee testing and test validation. It has been assumed that validation required by the Federal Contract Compliance is accomplished by this agency.

Commitment.—In coordination with the Central Office of the State University a letter will be forwarded to the New York State Commissioner of Civil Service requesting information relative to test validation requirements of the Office of Federal Contract Compliance.

6. Comment.—Apparently, the personnel information reviewed by the Compliance Review Team failed to identify the Associate Dean for Innovative and Developmental Programs in this category.

Commitment.—Deans and any future Search Committees for Deanships will be requested to make efforts to recruit minority candidates for Assistant Deans, Associate Deans and Deans.

7. Comment.—Apparently, the personnel information reviewed by the Compliance Review Team did not reveal a number of women holding positions at the level of Assistant Dean or higher. Among those not identified are: the Associate Dean of the School of Library Science; the Director and two University Physicians, and the Nurse Administrator in the Student Health Service; the Associate Dean of Students; the Associate Director of the Educational Opportunities Program; the Assistant Dean of the School of Nursing, and an Assistant Dean of the School of Social Welfare. All these are at the level of Assistant Dean or higher.

Commitment.—Special efforts will be made to recruit women candidates for all positions at or above the level of Assistant Dean.

8. Comment.—Under New York State Civil Service categories, classified service does not include administrators or professionals. However, we acknowledge a deficiency of minority employees in supervisory and professional positions.

Commitment.—Priority will be given to the recruitment of prospective minority group administrators and professionals.

9. Comment.—Our personnel information system indicates 71 non-white faculty members instead of the 27 contained in your findings. This larger figure includes other ethnic minorities in addition to Puerto Ricans and Negroes. The deficiency with respect to Negro and Puerto Rican underutilization is acknowledged.

Commitment.—Through our newly installed faculty vacancy control system, our recruitment committees for minorities and women, and our faculty line allocation and appointment decisions, wke will provide a major stimulus to the acquisition of minority faculty members. Through a more aggressive prosecution of our financial aid program for mniority graduate students we will endeavor to make a larger contribution to the available supply of prospective minority faculty members.

10. Coment.—The concentration of minority faculty members in the Afro-American Studies Department is acknowledged.

Commitment.—Through the steps in 9 (above) we will strive to achieve a wider distribution of our minority faculty resources across all academic departments.

11. Comment.—Statement acknowledged. Since the bulk of Black faculty are concentrated in a single, relatively new academic department, the proportion of tenured faculty is lower than for the faculty as a whole. Using our total of 71 non-white faculty members noted in 9 (above) we find 24 of these—or 6%—to be tenured.

Tenured decisions are based upon broadly-based collegial judgments made at departmental, school and university levels, and are thus not matters of administrative discretion.

Commitment.—To insure full opportunity to all present minority faculty members, we will ask departments to initiate tenure consideration for all eligible minority faculty members who wish to be considered during 1971–72.

12. Comment.—Deficiency acknowledged.

Commitment.—For faculty, commitment in 9 (above) applies; for academic administrators commitment in 6 (above) applies; for professional and administrative classified positions, commitment in 8 (above) applies.

13. Comment.—Deficiency acknowledged. Many females leave University employment after beginning teaching careers as instructors or assistant professors, because of marriage and family responsibilities.

Commitment.—An appropriate enlargement of female representation on the faculty particularly at the higher ranks will be sought through the mechanisms described in 9 (above).

To insure full opportunity to all present women faculty members, we will ask departments to initiate promotion consideration for all eligible women faculty members who wish to be considered during 1971–72.

14. Comment.—Apparently the analysis of tenure in the letter of findings was based on a comparison of tenured faculty with total faculty, including part-time personnel. Since part-time personnel cannot achieve tenure, this base may not be appropriate. Based on full-time personel, our records indicate that 44% of women faculty have tenure while 60% of male faculty are tenured. Likewise, we find that 73% of tenured female faculty hold ranks of Associate Professor and Professor, compared 94% of male tenured faculty at those ranks. These data do not appear to support your conclusion about level of appointment and length of service in lower ranks for women.

Commitment.—To insure full opportunity to all present women faculty members, we will ask departments to initiate tenure consideration for all eligible women faculty members who wish to be considered during 1971–72.

15. Comment.—Deficiency acknowledged.

Commitment.—An appropriate enlargement of female representation on the faculty will be sought through the mechanisms described in 9 (above).

16 and 16A. Comment.—Deficiency acknowledged. Our records show that all faculty members earning $20,000 or more, 12 are minority group members and 6 are women compared with 117 white males—a proportion of 13%. Of all professional personnel earning over $20,000, 13 are minority group members and 8 are women compared with 168 white males—a proportion of 11%.

Commitment.—We are initiating an analysis of the salary history of each female and minority faculty member compared with per white faculty members in the same departments, where applicable. The concerned department chairmen and deans will be required to justify any clear differentials in salary treatment of women and minority faculty members. In cases of unjustified salary discriminations we will seek authorization from the State University of New York Central Office and the New York State Budget Division to effect equitable redress. This University campus is not authorized to take such salary actions without extraordinary approvals of higher authorities and the provision of such discretionary funds from the State government.

17. Comment.—The School of Nursing is the newest School on this campus and presently offers only an undergraduate major. Its faculty are all quite recent to the University and their rank distribution accords with the level of instructional responsibility. The Dean of the School is a full Professor. During 1970–71 the School of Nursing had one full-time and one part-time male faculty member.

Commitment.—The faculty of this School will be accorded the opportunity described in commitment 13 (above) dealing with promotion. The School of Nursing will have a second full time male faculty member beginning in September 1971.

18—24. Comment.—Deficiencies acknowledged.

Commitment.—A policy of one-to-one hiring of minorities has been announced by the Vice President for Management and Planning and will affect all of the administrative staff. Objectives included in the Affirmative Action plans should correct this deficiency. Where Civil Service examinations are required to qualify for positions, we will coordinate with Central Office of State University and the State Civil Service Commission in correcting these deficiencies.

I have asked John W. Hartley, Vice President for Management and Planning, to answer any questions or provide additional information related to this matter, if required. Vice President Hartley may be contacted by phone. His number is (518) 457-4944.

Sincerely,

LOUIS T. BENEZET.

ANTI-DEFAMATION LEAGUE OF B'NAI B'RITH,
New York, N.Y., February 23, 1972.

Hon. LOUIS T. BENEZET,
President, State University of New York at Albany,
Albany, N.Y.

DEAR DR. BENEZET: On January 6, 1972, Prof. Malcolm J. Sherman wrote to us, as he did to you, in connection with the implementation by the State University of New York at Albany (SUNYA) of its Affirmative Action Program in behalf of minorities. Subsequently we received from Mr. Leon Calhoun, to whom you referred the matter, a copy of his memorandum of January 19, addressed to Professor Sherman, severely criticizing Professor Sherman's action in writing to us and disagreeing with Professor Sherman's point of view.

We believe Professor Sherman's position to be sound. Let us spell out why:

The Anti-Defamation League's very reason for being is its opposition to all forms of racial and religious discrimination against either groups or specific individuals. The ADL views such discrimination as an unconscionable violation of the moral and constitutional principles upon which American democracy stands and thrives.

The ADL's policy, therefore, has always been to oppose firmly quotas or other limitations based on race, creed, or color, and to support and demand practices in employment or in school admissions based solely on individual merit. We believe that our position supports the only final guarantees against discrimination and injustice toward minorities.

In our view, nothing can justify—let alone initiate—injustice against an individual or against a group because of skin color or other ethnic factors. "Preferential treatment" and racial quotas in behalf of minorities impose one form of racial discrimination in place of another. Like classic bias, it is the deliberate preference for an individual of one race, and solely because of his race, over an individual of another race, even in cases where the latter individual is better qualified in all other respects.

There is no question that Blacks have been greatly disadvantaged in the past due to a long and historical application of such bias and its continuing aftereffects. But past discrimination does not justify, as an attempted remedial measure, a new and equally deliberate and arbitrary discrimination against others. The questions that must be asked in this regard are: Is a white person to sacrifice his personal right to be judged on his own merit by accepting discrimination against himself based solely on the color of his skin? By what logic does some alleged "higher justice" legitimize such an injustice against an individual who has no personal responsibility for historic wrongs? And especially how does this apply at a university in a situation where there is no evidence that there has been any deliberate practice of anti-minority discrimination?

Because society in general bears the responsibility for such wrongs, society rightfully must, and indeed has begun to, undertake the job of righting them. This is the developing social philosophy behind "affirmative action" programs designed to secure better employment and educational opportunities for Blacks. But the aim of affirmative action should be broad social progress as regards racial equality, not the assignment of the historical blame upon, and then the penalizing of, single present individuals who happen to have white skin.

Here we must bear in mind that discrimination, looked at either legalistically or in terms of concrete everyday results, is always perpetrated against an individual, not against a broad and nameless mass. The right to be free from discrimination is an individual right, as the U.S. Supreme Court has consistently held, and it should not be abridged or modified on the basis of the indiviual's race or the history of his race. "Justice" for a group is utterly meaningless if it requires injustice toward individuals. This concept lies at the core of American and democratic values.

The reference by Mr. Calhoun to a U.S. Supreme Court decision that allegedly held constitutional an interpretation of affirmative action as including preferential treatment and racial quotas, is erroneous. The issue before the Circuit Court of Appeals in that case [*Contractors Assn. of Eastern Pa.* v. *Secy. of Labor*, 442 F.2d 159 (3d Cir. 1971), *cert. denied*, 92 S.Ct. 98 (1971)] is not the question before us in the SUNYA situation. Further, the Supreme Court in that case made no decision except to deny the application for review. Time and again the U.S. Supreme Court has said that in denying a writ of certiorari, it takes no position on the merits of the case.

If, indeed, one wants to know the law of our land as laid down by the U.S. Supreme Court on racial quotas, the landmark case is *Hughes* v. *Superior Court of California*, 339 U.S. 460 (1950) in which the Supreme Court clearly held that racial quotas in employment are unconstitutional. In that case the Progressive Citizens of America picketed a grocery store in support of its demands that, as white clerks quit or were transferred, the store hire Negroes until the proportion of Negro clerks to white clerks approximated the proportion of Negro to white customers. The Supreme Court upheld the injunction against the picketing granted by the lower court.

Mr. Justice Frankfurter, writing for the majority, stated that the picketing, if permitted, would "give constitutional protection to petitioners' efforts to subject the opportunity of getting a job to a quota system."

Now to the matter at hand:

In a memorandum over your signature, dated September 28, 1971, addressed to vice-presidents, deans and directors, you concerned yourself with the goals of the State University's Affirmative Action Program. In it you stated that one way of achieving these goals would be for the recipients of the memorandum to anticipate vacancies over a five-year period and indicate *how many* of them "could feasibly be allocated to minority members". Asking for numbers is a clear request for a quota in behalf of minority applicants. We think such a quota is in violation of the 14th Amendment, in violation of New York State's Constitution, of its laws, regulations and judicial decisions. We also believe such racial quotas to be inimical to the public weal, violative of the democratic concept and destructive of the right of individual merit. Instead of assuring equality of opportunity, you are engaging in a program of unequal opportunity.

We have before us, in contrast to your suggested quotas approach, the implementation of an Affirmative Action Program by Chancellor Robert J. Kibbee of the City University of New York. It is in the form of a December 10, 1971 memorandum to CUNY's administrative staff, expressly written to allay possible misunderstanding regarding the correct method in which the CUNY Affirmative Action Program is to be implemented. In so many words, the memorandum warns against erroneously interpreting policy as favoring the establishment of an "employment quota system based upon race, religion, gender or ethnic origin." Chancellor Kibbee expressly adds that in meeting the criteria of the Presidential Executive Order, no interpretation is to be placed upon it that the Program or its implementation "require preferential treatment in recruitment, hiring or promotion on the basis of criteria other than merit. It is our overall personnel policy, of which affirmative action is an important component, that the choice among candidates for hiring or promotion is to be that candidate demonstrating the maximum potential for meeting the job's requirements."

Anther document, dated August 10, 1971, from your State University (SUNYA), made available to us by Professor Sherman, is entitled, "Affirmative Action Program for Equal Employment Opportunity." On page 3 of this memorandum, it is indicated that "the University will defer the filling of some positions until qualified minority members and women are added to the staff of the University." In our view this instruction is similarly a violation of law, in that it virtually forces administrators to choose between hiring on racial or ethnic grounds or having essential jobs go unfilled.

A third instance of violation is the requirement in B-2b of the policy statement on this subject issued on August 31, 1971, by SUNYA. It calls for the "adoption of a deliberate posture of actively seeking . . . qualified or qualifiable persons of minority status . . . who are presently under-represented . . ." By itself, this instruction is thoroughly proper, but against the background of the other directives emanating from SUNYA, it must be read as requiring preferential treatment instead of individual merit, as required by the laws of our land. Under the merit system, only the *best* qualified person—not *any* qualified person—may be appointed. Furthermore, for a college to hire a merely "qualifiable" person to be a professor or administrator, would be a debasement of educational standards.

Confirming this improper implementation of your Affirmative Action Program, is the fourth instance before us, *i.e.*, a September 3, 1971, memorandum from Clifton Thorne, Vice-President for Student Affairs, directed to the University's Directors of Student Affairs Functions. It contains a directive that "to overcome present under-utilization of minorities, temporary preference in the hiring of new personnel must be given to members of minority groups with particular emphasis on the appointment of Blacks, Puerto Ricans and Indians, as well as to women."

As if the nail down the absolute illegality of the instruction, Mr. Thorne goes on to say, "as a guideline, I would urge that no fewer than one of every three new and vacant positions be filled with minority members . . . ." To eliminate any doubt whatever that this illegal instruction is authorized, the memorandum bears the University's imprimatur "APPROVED BY THE OFFICE OF EQUAL EMPLOYMENT OPPORTUNITY."

At the risk of repetition, we emphasize our view that this latter instruction in the Thorne memorandum, and the University's approval of it, are in clear violation of the Federal and New York law, as well as SUNYA's own policy statement respecting its Equal Employment Opportunity Program. Specifically, in New York State, and that is what we are here dealing with, there is an explicit statute prohibiting discrimination in employment on account of race, creed or national origin. N.Y. Executive Law, sec. 296, subd. 1(a). To say it another way, the thrust of all three mandates is expressed in the prohibition set forth in SUNYA's own policy statement—a mandate against "discrimination in employment because of race, color, religion, sex or national origin".

A fifth document in our hands, the Agenda for a January 21, 1972 meeting of the SUNYA University Senate, contains the report given by Dr. Philip Sirotkin, SUNYA's Vice President for Academic Affairs to a December 16, 1971 meeting of the SUNYA Council on Educational Policy. In his report Dr. Sirotkin states that 10 of the 86 faculty vacancies expected by September 1972 "were specifically earmarked for the appointment of women and minorities." We regard this commitment as a further blatant example of an illegal quota.

Finally, there is at hand a press clipping which, if accurate, is additional evidence of violation of law by SUNYA. It is a December 3, 1971, clipping from page 16 of the Albany Student Press reporting that "John Hartley, Vice President for Management and Planning, has announced a policy of one-to-one hiring of minorities affecting all of the administrative staff. This means that for every white (non-minority member) hired, a minority member is hired." This news story is still another clear indication of the imposition of an illegal quota in behalf of minority group people.

Presidential Executive Order 11246, as amended, and the official guidelines of the U.S. Department of Labor's Office of Federal Contract Compliance (which are binding on HEW and all other Federal agencies, as well as on all Federal contractors) are, of course, the source of SUNYA's obligation to promulgate an Affirmative Action Program in the first place. The detailed rules of the guidelines are directly relevant on this matter.

The specifically warn that "goals may not be rigid and inflexible quotas that must be met". The same guidelines state that goals are "not intended and should not be used to discriminate against any applicant or employee beacuse of race, color, religion, sex, or national origin". Distorting the Affirmative Action Program into a program of racial quotas or racial preferential treatment, is a clear violation of these guidelines.

For the foregoing reasons, the Anti-Defamation League of B'nai B'rith vigorously protests the distortion of the Affirmative Action concept at SUNYA.

In conclusion, let us reiterate that the Anti-Defamation League has always fougth for equal opportunity in employment, and other areas. We have always fought quota systems restricting equality of opportunity for any group. We strongly support both the merit system and affirmative action programs. We oppose the distortion of affirmative action programs into programs of preferential treatment of one person or group over another person or group on account of race or creed—as destructive of equal opportunity and violative of the Constitution and Federal and State laws. We deeply believe that affirmative action programs designed to achieve equality of opportunity for minority groups can be effectively implemented without violating the fundamental laws of our nation.

May we ask your response.

Sincerely,

Seymour Graubard, *National Chairman.*

DEPARTMENT OF HEALTH, EDUCATION, AND WELFARE,
OFFICE OF THE SECRETARY,
Washington, D.C., December 14, 1972.

Dr. LOUIS T. BENEZET,
President, State University of New York at Albany,
Albany, N.Y.

DEAR DR. BENEZET: As you may know, the Anti-Defamation League of B'nai B'rith, on behalf of itself and five other national Jewish organizations, has filed with this Department allegations of abuses in faculty and administrative employment by a number of colleges and universities, among them State University of New York at Albany.

These organizations are concerned that, in an effort to meet your affirmative action commitment to expand employment opportunities for women and minorities, you have possibly engaged in discrimination against white male applicants on account of their race or sex.

I am enclosing a copy of the allegation lodged against your institution. I would appreciate receiving from you a response to the allegation contained in the enclosure so that we might be able to determine whether further investigation is necessary.

While it is our purpose to ensure equal opportunity in employment, we are concerned that well-intent affirmative action efforts not be implemented in such a way as to promote or result in any form of discrimination prohibited by law.

Specifically, I would like to call your attention to the first paragraph, page eight, of the enclosed Higher Education Guidelines for Executive Order 1246, which states:

> In the area of academic appointments, a non-discriminatory selection process does not mean that an institution should indulge in "reverse discrimination" or "preferential treatment" which leads to the selection of unqualified persons over qualified ones. Indeed, to take such action on grounds of race, ethnicity, sex or religion constitutes discrimination in violation of the Executive Order.

I trust that your response will help to clarify this matter.

Thank you for your cooperation. If I may be of assistance to you in expediting a response, please do not hesitate to contact this Office.

Sincerely yours,

J. STANLEY POTTINGER,
Director, Office for Civil Rights.

STATE UNIVERSITY OF NEW YORK AT ALBANY,
December 28, 1972.

Mr. J. STANLEY POTTINGER,
Director Office for Civil Rights,
Department of Health, Education, and Welfare,
Washington, D.C.

DEAR MR. POTTINGER: Your letter about the Anti-Defamation League of B'nai B'rith's complaints of abuse in faculty and administrative employment has been referred to me for reply by President Benezet.

We have written both the Anti-Defamation League and the American Jewish Congress and have met personally with the ADL to explain the Affirmative Action Program of this University and to attempt to convince them that our plan is not discriminatory. I have enclosed copies of our letters to these organizations.

Following our face-to-face meeting with the Anti-Defamation League of B'nai B'rith earlier this year, we reviewed the language of our plan and issued a "Statement on Affirmative Action at State University of New York at Albany" (also enclosed) to clarify those parts of the program which might be misinterpreted. This statement was reviewed and presented to the University Senate by its Council on Educational Policy. The University Senate of this campus adopted this statement as Bill Number 197172–42. We think that *this* statement addresses itself to the alleged discrimination charges.

We have also formally explained to Mr. Seymour Graubard of the Anti-Defamation League of B'nai B'rith and more recently to Mr. Martin Hochbaum if the American Jewish Congress that the Affirmative Action Program of the University is designed only to overcome the past pattern of discrimination against women and minorities and to increase the pool of qualified persons available for employment consideration. The employment selection process of this University campus is based on suitable qualifications as determined by the professional standards established by faculty, staff, and the New York State Civil Service. We do *not* believe that "reverse discrimination" is an acceptable course of action to achieve our goal of increased employment and educational opportunity for minorities and women. We believe we have assured the campus community of this principle.

We are presently planning to rewrite our Affirmative Action Program to comply with the format soon to be issued by the Central Administration of the State University of New York. This will result in a change of the present language. There will be no change in the principles or objectives of the plan. Copies of the revised version will be made available to ADL, the American Jewish Congress and any other organization that would like to have one.

A review of the recent hiring statistics compiled since our Affirmative Action Program has been in effect does not reflect reverse discrimination as alleged but shows a successful trend toward overcoming the present "under-utilization" of women and minorities.

NEW APPOINTMENTS 1972-73

	Number	Percent
Total hired	150	100
Total white	128	85
White male	71	47
White female	57	38
Total minorities	22	15
Male	8	5
Female	14	10

I hope that this response answers your questions. If it does not or if there are other questions, please get in touch with me.

Sincerely,

JOHN W. HARTLEY,
Vice President for Management and Planning.

JANUARY 2, 1973.

Mr. J. STANLEY POTTINGER,
Director, Office for Civil Rights, Department of Health, Education, and Welfare, Washington, D.C.

DEAR MR. POTTINGER: Vice President John Hartley's December 28 analysis of our Affirmative Action Program expresses our position accurately. As you know, the principal difficulty remains to locate sufficient qualified candidates who are women or minority people.

From many years in this business, I feel safe in predicting that it will be a long time before there will be a market situation which could even permit "reverse discrimination" if an institution wanted to practice it—and I assure you we don't.

Sincerely yours,

LOUIS T. BENEZET.

DEPARTMENT OF HEALTH, EDUCATION, AND WELFARE,
OFFICE OF THE SECRETARY,
Washington, D.C., January 31, 1973.

Mr. JOHN W. HARTLEY,
Vice President for Management and Planning, State University of New York, Albany, N.Y.

DEAR MR. HARTLEY: Mr. Pottinger has asked that I thank you for your recent response to his December 14 inquiry concerning an allegation of discrimination in employment procedures lodged against the State University of New York, Albany, by the Anti-Defamation League of B'nai B'rith.

On the basis of your letter and that of President Benezet, in addition to the enclosures, we assume that the review of your affirmative action policy was designed in part to preclude any future instances of discriminatory hiring under which, for instance, certain positions may be "earmarked" for minority persons in the sense that other persons may not apply or be considered for those positions. However, neither your letter nor the "Statement on Affirmative Action" makes specific reference to this and other alleged discriminatory policies cited in the report of the Anti-Defamation League and in the inquiry we sent to the University on December 14. I hope that you will understand that, as a law enforcement agency, the Office for Civil Rights must seek out the facts in connection with complaints submitted for review. Therefore, I would like to request that you address yourself to the specific instances of alleged discrimination noted in our earlier inquiry. If the statements and polcies attributed to the University by the ADL are correct, we would like such confirmation, including an indication as to whether and by what means the policies have since been modified, if at all.

Permit me to add that the University's commitment to affirmative action, as broadly set forth in your correspondence, including the establishment of goals and timetables, is not in question here. Your correspondence indicates an awareness of the distinctions between an affirmative action program that is acceptable and one that has the effect of discrimination in violation of the Executive Order. We would not want to give the impression, by this inquiry, that the Office for Civil Rights is disputing here your expressed understandng in this regard. We merely wish to ascertain the facts with respect to the specific action the University has undertaken to modify those policies cited in the report.

I trust that we will hear from you shortly. If I may be of assistance in expediting your response, please do not hesitate to contact me.

Sincerely yours,

SAMUEL H. SOLOMON,
Special Assistant to the Director, Office for Civil Rights.

STATE UNIVERSITY OF NEW YORK AT ALBANY,
February 26, 1973.

Mr. SAMUEL H. SOLOMON,
Special Assistant to the Director, Office for Civil Rights, Department of Health, Education, and Welfare, Washington, D.C.

DEAR MR. SOLOMON: I have your letter responding to our explanation of the alleged discrimination in employment charges made by the Anti-Defamation League. You have asked that we reply more directly to the specific charges cited in the report of the Anti Defamation League, so let me attempt to do that.

First, may I say that the instances which the Anti-Defamation League has cited all occurred in the very early stages of the development of our Affirmative Action Program. I think I must concede that in the spirited drive to get the Affirmative Action Program working to correct the imbalance of employment at this University there may have been some statements made which perhaps went beyond the intent of the program. But let me emphasize again that there has not been at any time any policy to employ anything less than the best qualified people for any position. We do wish to assure ourselves that minority and women candidates are solicited and considered for each job opening.

All of the incidents cited by the Anti-Defamation League reflect the urging of our principal administrators to their staffs to improve the employment situation with regard to women and minorities and are not examples of official policy.

Let's look at each of the alleged discriminatory actions.

We did request that deans and department heads anticipate vacancies over a five year period and indicate how many could be allocated to minority members. This was a matter of setting goals for the employment of minorities. We were not establishing quotas. I am sure you know the subtleties in distinguishing between goals and quotas and the controversy which has arisen around this. Our language may have left something to be desired but our intent was to set goals. The language has been made clearer in the subsequent official policy.

The Anti-Defamation League cites a directive which recommends that no fewer than one of every three new vacant administrative positions dealing with student affairs be filled with minority group members. Let me say again that this was not a policy but only the urging of one of our senior administrators to correct the employment imbalance. The language may have been broader than it should have been but this was early in the development of Affirmative Action. We needed to get people's attention.

The same is true for the news story in the campus newspaper reporting that I had announced a policy of one-to-one hiring of minorities. Again, this was a device to bring to the attention of our administrative departments that we were serious about implementing the Affirmative Action Program, as we still are. We wanted to be sure that minority candidates were interviewed for jobs. I think the ADL charges take these statements out of the context in which they were made. This gives a distorted perspective.

You have copies of our Affirmative Action Program. You have copies of the actions taken by the University Senate. These reflect the development of the Affirmative Action Program and are the official policies of the University. The urgings of members of the administration to try to implement the policy were necessary in the early days in order to get the program moving.

Finally, the chairman of the Judaic Studies Department, Professor Eckstein, did write to a professional association that the department was searching for a biblical scholar who is either female or a member of a minority group. Again, Professor Eckstein was attempting to assure that we would receive applications from women and minority candidates and the steps he followed seemed necessary to accomplish that.

Overall, it seems to me that the Anti-Defamation League is splitting hairs on this issue. I am quite willing to say that we were making concerned efforts to get minority candidates and women candidates to apply for jobs at this University and that we may have over-stepped a little in some instances to assure that this was done. Let me reiterate, however, that we do not intend to hire unqualified people. We do intend to have every job open to all candidates without discrimination. We think we are beginning to accomplish this. Our record shows that progress has been made in the past two years. It does not show, by any stretch of the imagination, that we have discriminated on behalf of women and minorities. We still have a long way to go to bring employment in balance.

I hope that this clears up the matters which you have inquired about. Please let me know if you would like further information from us. We would like to get the arguments settled and get on with the job of establishing equal employment opportunity.

Sincerely,

JOHN W. HARTLEY,
Vice President for Management and Planning.

DEPARTMENT OF HEALTH, EDUCATION, AND WELFARE.
OFFICE OF THE SECRETARY.
Washington, D.C., March 29, 1973.

Mr. JOHN W. HARTLEY,
Vice President for Management and Planning,
State University of New York, Albany, N.Y.

DEAR MR. HARTLEY: Thank you for your letter of February 26. I appreciate your taking the time to set forth a more detailed response to the allegations cited in the report of the Anti-Defamation League.

As indicated in my correspondence of January 31, we are not questioning the University's commitment to affirmative action or the overall intent of its affirmative action program. The April 1972 "Statement on Affirmative Action" is generally sound. However, there is some difficulty with the rationale of your most recent correspondence. You seem to justify overstatement of purpose on the grounds that it has been utilized in pursuit of a positive end. You acknowledge statements which have gone "beyond the intent of the program," language that leaves "something to be desired," and language that "may have been broader than it should have been." These, you say, have been attention-getting devices, whose purpose has been to urge upon your administrators the seriousness of your equal employment opportunity efforts. I would suggest that if your administrators were to accept your urgings with the same seriousness with which they have been proffered and if they were to attain the objectives as set forth, then the result could conceivably be precisely that about which the ADL complains, namely quota hiring and reverse discrimination in recruiting. One-in-three or one-for-one hiring of minorities reflects quotas in employment. You indicate that this was not university policy, but certainly when it comes at the urging of senior administrators it has the effect of policy. Seen in this light, it is perhaps inappropriate to view the ADL allegations as "splitting hairs."

We believe that a strong affirmative action plan, implemented in a nondiscriminatory manner at the behest of a well-motivated and effective leadership, such as has been demonstrated at SUNY-Albany, develops its own momentum. As a major university administrator who deals with the problems of equal employment opportunity on a continuing and regular basis, you certainly recognize the sensitivity of the issues involved.

We want to encourage you in what appears to be a very comprehensive affirmative action program to expand employment opportunities for women and minorities. We hope, too, that you will be mindful of the concerns and potential repercussions that can result from over-statements, such as those cited in your letter. Your revision of the University's affirmative action plan appears to have been part of an effort to eliminate sections that might be subject to misunderstanding and to make the program's structure more responsive to the University's needs and to Federal regulations.

Once again, thank you for amplifying on your earlier comments. Please do not hesitate to contact us if we may be of further assistance.

Sincerely yours,

SAMUEL H. SOLOMON,
Special Assistant to the Director, Office for Civil Rights.

STATEMENT OF KENNETH B. LITTLE, PH. D., EXECUTIVE OFFICER, AMERICAN PSYCHOLOGICAL ASSOCIATION

On behalf of the American Psychological Association, I would like to share with the Special Subcommittee on Education some of the experiences our organization has had with affirmative action and to compare this experience with some information we have developed on the subject for psychology in general. Our own experience suggests that affirmative action is a positive step not only for the women involved, but also for the organization undertaking it. On the other hand, while affirmative action regulations have sensitized the psychological community to the operation of sex bias in research, the process of education, and hiring practices, actual changes in these practices themselves have not lived up to expectations. Hopefully, hearings such as these conducted by the committee will result in efforts to actualize the intentions of affirmative action regulations.

Since 1970 the American Psychological Association has moved to ensure that women psychologists would be fully enfranchised members of the psychological community. Within our organization that has meant the development of a Committee on Women in Psychology as well as other committees formed in response to affirmative action issues. These include a Committee on Academic Freedom and Conditions of Employment, a Committee on Equality of Opportunity in Psychology, a Task Force on Issues of Sexual Bias in Graduate Education, and a Task Force on Sex Bias and Sexual Stereotyping in Psychotherapeutic Practice. In reviewing the operations of the American Psychological Association for the period 1968–73, the Executive Officer was able to demonstrate significantly increased participation of women psychologists on various committees and boards of the organization as well as within the office staff of the Association.

This increased interest, concern, and gradual progress has been heartening and quite directly traceable to the impact of a general government commitment to affirmative action. On the other hand, the report, *Doctoral Scientists and Engineers in the United States, 1973 Profile*, from the Commission on Human Resources, shows that in the scientific community in general, "Women constituted about 9% of the science and engineering doctoral population—2,300. Their median salary was $17,620—$3,500 less than the median salary for men. Women reported an unemployment rate of 3.9%, while the rate for men was 0.9%." The position of women within psychology reflects this poor showing for science in general. This was clearly demonstrated among academic psychology programs.

Attached is the "Survey of Departments of Psychology—1972 and 1973" developed by the Committee on Women in Psychology of the American Psychological Association to evaluate the progress of women psychologists as faculty members of academic departments. Summary Table 4 on page 6 shows that although the percentage of women *instructors* on full time faculties increased from 36% to 43% between 1972 and 1973, the percentage of women *professors* decreased from 8% to 7% from 1972 to 1973. From academic year 1970–71 to 1973–74 there has been increased enrollments of both women and minorities in doctoral programs in psychology. (APA Manpower Survey). At the same time, as Summary Table 4 demonstrates, there has been a small increase in the number of women at the lowest ranks on psychology faculties. This is an initial step in equalizing opportunities for women within the profession of psychology, but in many ways is a misleading one. The Committee on Women in Psychology has received informal reports from numerous women who have been offered one year appointments at various universities. In this respect the universities are attempting to comply with the affirmative action regulations. At the same time the spirit of the regulations is being avoided since, regardless of the women faculty member's performance during her year's appointment, many of them have been notified that the university will be unable to continue that appointment. They thus have no opportunity of becoming a part of the regular tenured faculty. Increasing the input of women and minorities at the lowest level (graduate student and instructor) of the psychological profession without any parallel commitment to following through with increased representation at every level of the instructional staff creates a deceptive picture of progress in coping with sex discrimination.

The "Survey of Departments of Psychology," Summary Table 5 on page 6 of the attchment, also points up the fact that even when women do attain appropriate positions within the psychological heirarchy, they continue to be paid at a lower salary than their male colleagues. In fact, between 1972 and 1973 the salary differential between men and women increased. In 1972 male full professors received $1,720 more than their female colleagues; in 1973 that differential increased to $2,357. Thus, although it may be generally believed that women have made significant progress, particularly within the professions, in the past few years, for psychology the statistical data simply do not support this impression.

The lack of women scientists in the major positions of responsibility in psychology has had a significant impact on the development of psychology as a science. Psychology, as it relates to women, has been permeated with unexamined biases which may distort scientific conclusions. In addition to the fact that psychological theories are usually conceived by men with men in mind, women are used much less frequently as subjects in psychological experiments and their psychology is often inferred by reference to a male model. Moreover, whole areas of inquiry of importance to women are not researched at all, and the whole process of the research enterprise is frequently distorted by the sexually biased value orientation of the scientist without his/her awareness of such bias. The presence of women in the field of psychology on an equal footing with men would be a significant corrective for this distortion in the science of psychology.

In summary, a review of our organization's experience over the past few years with affirmative action demonstrates its importance as a spur to increasing the involvement of women in the psychological profession. At the same time it is clear that greater government action is necessary to promote an actualization of equal opportunity for women within psychology and society in general.

SEPTEMBER 20, 1974.

AMERICAN PSYCHOLOGICAL ASSOCIATION

WASHINGTON, D.C.

As staff liaison for the Committee on Women in Psychology of the American Psychological Association I am very concerned about the on-going hearings of the Special Subcommittee on Education on civil rights compliance on eligibility for federal assistance by institutions of higher education.

I am attaching a statement from the Executive Officer, Kenneth B. Little, Ph.D. of the American Psychological Association concerning the experience of our organization with affirmative action regulations that I would like to submit for the committee's record. In addition, in this letter I should like to share my personal experience with the importance of affirmative action.

In addition to my position here as staff liaison for the Committee on Women in Psychology, I am Administrative Officer for Policy Studies, a senior staff position. This position became known to me in an advertisement in the American Psychological Association *Monitor*. The policy of advertising such positions and encouraging the response of minority and women candidates is a clear result of affirmative action input to the American Psychological Association. In the past four years there has been a move away from filling positions of responsibility with "friends of friends" to a new awareness that since the friends of "white males" tend also to be "white males" such recruitment results in excluding qualified women and minority doctorates from positions of responsibility in the organization.

After taking my position as Administrative Office for Policy Studies and being invited to serve as staff liaison for the Committee on Women in Psychology, my own awareness of sexual bias was strikingly enhanced. Stimulated by affirmative action requirements, colleges, universities, and organizations such as ours have been polling our own memberships to determine what qualified individuals are available. In doing so I have been astonished to find the large number of well trained, competent and interested women available for positions of responsibility who until recently were simply assumed not to exist.

The attached statement will more carefully delineate the impact of affirmative action on the operations of the American Psychological Association.

Thank you very much for your consideration of this material.

Sincerely,

SERENA STIER, PH. D.,
Administrative Officer, Committee on Women in Psychology.

SURVEY OF DEPARTMENTS OF PSYCHOLOGY—1972 AND 1973

Data have been collected for the last three years from graduate departments of psychology to assess the status of women. The SPSSI (Division 9) Committee on Sex Discrimination Survey in the Spring of 1971 drew a response from 74 percent of the total 231 deparments. In Spring 1972 the Task Force on the Status of Women in Psychology modified the questionnaire to reflect the issues spelled out in its Guidelines to Department Chairpeople, and this mailing drew an 83 percent response from the population surveyed, which consisted of APA-accredited departments, and the largest Ph. D. and M.A. granting departments. With minor changes, the 1973 Survey Questionnaire was sent to the same institutions, yielding an 86 percent response rate of those who answered in 1972.

These data have been collected in order to monitor to what extent the Guidelines formulated by the earlier Task Force are being implemented. Thus, the reports serve the purpose of providing feedback for the Council of Representatives, boards and committees in the APA governance structure, as well as for relevant government agencies and psychology departments. Moreover, these data continue to point out the necessity of further actions in order to remedy the existing inequity in the status of men and women psychologists.

Data comparing academic years 1971–72 and 1972–73 are included in the attached tables. An examination of these data does not show apparent changes in the reward structure, such as rank and salaries. However, there are some positive changes noted with respect to institutional policies—e.g., parental leaves granted working parents, anti-nepotism regulations, and the offering of women's studies courses.

After three years, it is a well-documented fact that a great deal of work remains to be accomplished in order to effect change and achieve our goal. New measures must and will be sought to overcome the patterns of discrimination which have prevented equality for men and women psychologists.

LIST OF INSTITUTIONS AND PROGRAMS IN 1972 AND 1973 SURVEYS

A. Respondents in both 1972 and 1973:

Adelphi[1]
Arizona, Univ. of[1]

FEDERATION OF ORGANIZATIONS FOR PROFESSIONAL WOMEN,
Washington, D.C., September 22, 1974.

Hon. JAMES G. O'HARA,
Chairman, Special Subcommittee on Education,
Cannon House Office Building,
Washington, D.C.

DEAR CONGRESSMAN O'HARA: On behalf of the Federation of Organizations for Professional Women, I am submitting a statement of our views concerning your hearings on "Civil Rights Compliance and Federal Funding for Institutions of Higher Education." As I believe our Government Liaison Task Force Chairperson, Dr. Helene Guttman, has already indicated to you, the Federation was disappointed that it was not asked to appear before the committee. Our membership is especially concerned with the achievement of equal rights on campus and is therefore keenly interested in being assured that the recent forward progress will not be halted due to a relaxation of affirmative action requirements.

In addition to our statement, the Federation would also like to submit for the record three documents which we believe shed useful light on the hearing topic. These include the following:

1. Statement of Affirmative Action for Equal Employment Opportunities by the United States Commission on Civil Rights.
2. "Affirmative Inaction on Campus: Will the Real Victims Please Stand Up?" An unsigned article from *The Spokeswoman*, August 15, 1974.
3. Gertrude Ezorsky, "The Fight Over University Women," *The New York Review of Books*, May 16, 1974.

Thank you for your consideration of these submissions.

Sincerely,

JULIA GRAHAM LEAR,
Chairperson, Affirmative Action Task Force.

STATEMENT OF JULIA GRAHAM LEAR

CIVIL RIGHTS COMPLIANCE AND FEDERAL FUNDING OF INSTITUTIONS OF HIGHER EDUCATION

During the past year, the Federation of Organizations for Professional Women, an umbrella association of 53 professional organizations and caucases dedicated to equal rights for women, has watched with concern as a groundswell of opposition has developed to application of Revised Order No. 4 to institutions of higher education. It appears to us that the impression has been created that the order has forced universities to lower standards to hire women and minorities and that the only purpose the order serves now is to perpetuate the inordinate power women and minorities wield on campus. Our membership, which includes academicians in the social sciences, humanities and physical sciences, rejects this motion and wishes to stress to your committee our belief that equal rights both for women and minority students and faculty are as yet an unrealized dream at many universities. We still need strong, effective affirmative action programs to assure equal opportunity on campus.

The opponents of affirmative action and Revised Order No. 4 appear to base their claim that the bureaucratic procedures required by the order are unnecessary on the following grounds:

1. That universities now routinely follow non-discriminatory practices and seek out the best candidate, male or female, whether for teaching positions or scholarships.

2. That a lack of supply of quality candidates is the reason women have not been hired by some faculties.

3. That the order itself encourages reverse discrimination and is inherently unfair to universities.

We would like to comment on each of these contentions in light of our experience during the past several years.

1. *Universities routinely follow non-discriminatory practices and seek out the best candidates without regard to sex or race.*—Unfortunately, this is not the case. For example, in December 1973, the Committee on the Charles Bullard Fund for Forest Research, Harvard University placed a page length column in the journal *Bioscience* announcing fellowships for "advanced research and study by men." Throughout the advertisement references were to "his" and "him". While inquiries from the Federation and the Association of Women in Science produced assurances that women were welcome to apply, the announcement did not read that way and implied quite the contrary. Thus, despite two years of allegedly oppressive government regulation in support of equal employment opportunity, at least one group of senior professors at Harvard were unaware of their obligation to advertise for "men and women".

2. *A lack of supply of quality candidates is the reason why leading universities have hired so few women.*—Data from my own field, political science, calls this statement into question. According to statistics published by the American Political Science Association in 1974 the following major departments of government had no women on their faculties (the number of faculty members appear in parentheses): Columbia (25), Cornell (25), North Carolina (34) and Syracuse (26). Three departments employed one woman: University of California at Berkeley (42), Stanford (25) and Yale (27). What is peculiar here is that these same universities were graduating women doctorates at increasing rates and these same graduate departments would generally be the source of new assistant professors at the more prestigious schools. For example, in the past three years Berkeley graduated 18 women doctorates, Columbia—28, Harvard—22 and Yale—7.

Professor Richard Lester in *Antibias Regulation of Universities* suggests that women would be more in evidence on the faculties of elite universities if the federal government would undertake to finance graduate programs for women and minorities at the elite schools. But the evidence above indicates that the problem does not lie in the absence of women graduate students. Women are being accepted into the graduate programs at major universities; they simply are not being hired.

Some statistics covering other disciplines and institutions reveal that the situation in political science is not unique. *The Spokeswoman* printed the following statement in "Affirmative Inaction on Campus" (August 15, 1974): "In 1968, 26% of Ph. D.s awarded in psychology at major institutions went to women, as well as 20% in zoology, 21% in biochemistry, 13% in history and 11% in philosophy. In 1968–69, Berkeley had 163 men filling 163 positions in these disciplines. In 1960, Harvard awarded 10% of Ph.D.s in arts and sciences to women, and in 1969, 19%. Of 484 senior Harvard faculty members in 1969–70, 483 were men. . . . Unless these universities believe the degrees they give are worthless, they can only explain the under-utilization of women by saying that 1) women don't want to teach after they get the degrees or 2) that family pressures reduce ambition and output and thus justify low salaries and slow promotion rates. Ezorsky calls the rationalization of "family responsibilities" one of the most pervasive and pernicious, and gives it a name of its own: "famrat." Famrat doesn't stand up to the facts, however: 90% of women Ph.D.s are employed, primarily in lower ranking universities and at lower levels. A 1967 article in *Social Problems*, "The Woman Ph.D., a Recent Profile," found that married women Ph. D.s published as much or more than men Ph. D.s.

3. *The order itself encourages reverse discrimination and is unfair to universities.*—The widely-held belief that the order requires reverse discrimination and permits overbearing directives to universities from the Office for Civil Rights, H.E.W. is, we believe, not the result of careful study of the order's impact, but the result of a barrage of mis-leading criticism from some of our most distinguished scholars and administrators. For example, on October 27, 1973 (p. 59) *The Economist* reported the following from a conference in Vienna entitled "International Council on University Emergencies":

> . . Martin Seymour Lipset, a sociologist from Harvard, set out his argument in his report on the American scene. The state now has the whip hand over many universities in the United States, he said, because of the financial squeeze imposed by the Nixon administration. They are being asked by government departments and courts for "affirmative action": towards minority groups, defined as women, blacks, Latin Americans and American Indians.
>
> This means hiring university staff under special quotas laid down by the Department of Health, Education and Welfare, sometimes without regard for the academic merit of the candidates.

If Professor Lipset's presentation was reported correctly, this can only be described as the grossest distortion of what Revised Order No. 4 says. There is no requirement to hire unqualified people: there is only a requirement to recruit broadly and to open up the hiring and promotion processes.

An equally misleading statement was made by President William McGill of Columbia University concerning H.E.W.'s administration of Revised Order No. 4 in a *Life* magazine editorial, October 8, 1971. President McGill charged that, without "prior warning", H.E.W. had informed Columbia that it was not in compliance with the order and would face a cut-off of federal funds. McGill went on to state that "There was no notice of hearing or right to appeal, no clear indication in fact of the manner in which we had failed in compliance." As the committee is probably aware, H.E.W.'s rejection of Columbia's affirmative action plan culminated two and one-half years of negotiations between the university and H.E.W.'s Office for Civil Rights. During that time Columbia had consistently refused to provide basic employment data that was fundamental to the construction of a new affirmative action policy.

Opponents of affirmative action are probably correct, however, when they reject the order on the grounds it permits universities to make sex and race relevant criteria in hiring. The question is: Is this a bad thing? The Revised Order assumes that it is desirable to have women and minorities employed by universites to the degree they are available in the appropriate disciplines. And this may mean that in cases where women and minorities have been restricted or excluded before, the order is suggesting that one's sex or race may be relevant to the candidate selection process—*all other things being equal.* It can thus be argued that since the regulation does not encourage blindness to sex or color, the regulation is therefore defective. While this argument, on its face, is persuasive to all concerned with even-handed justice, we would suggest that a regulation that forbade any consideration of race or sex in evaluating job candidates *at this time* might be analagous to the situation Anatole France had in mind when he noted that the French government, with a passion for equal justice, had forbidden both the rich and the poor from sleeping under bridges. A regulation which on its face may appear fair may actually serve to perpetuate hardship for a traditionally deprived group. We believe that until the legacy of female and minority exclusion has been dissipated, some kind of mechanism (whether it be Revised Order No. 4

or similar legislation) will be absolutely essential to assure equal justice for women and minorities on campus.

As a final comment, we would submit that if there has been improper implementation of the order, that does not mean the regulation is bad, but it may mean that there has been poor enforcement and perhaps some bad faith. We think there are remedies for poor enforcement which would not require exempting universities from the obligations of Revised Order No. 4. It would certainly be appropriate before re-constructing the civil rights obligations of universities that some attempt be made to determine what has happened on campus under the revised order. To date an impartial study of this matter has not been made. Obviously, changes in the civil rights obligations should not be made lightly. Affirmative action did not spring full blown out of a meddlesome bureaucracy but, as Virginia Willis wrote in *Affirmative Action: The Unrealized Goal*, "Affirmative action has its roots in the failure of attempts over three decades to establish equal employment opportunity through passive prohibition of conscious discrimination." Any attempt to replace the order must proceed in full recognition of this fact and only after data concerning the implementation of the order has been received and carefully studied.

STATEMENT ON AFFIRMATIVE ACTION FOR EQUAL EMPLOYMENT OPPORTUNITIES BY THE U.S. COMMISSION ON CIVIL RIGHTS

Since its creation in 1957, the U.S. Commission on Civil Rights has investigated and analyzed the issue of employment discrimination. This pervasive problem continues to attract considerable attention although great strides have been taken by the Federal Government to remedy it. State and local Fair Employment Practices Commissions, Title VII of the Civil Rights Act of 1964, the Equal Employment Opportunity Commission, and Executive Order 11246, are all products of the past 15 years of attention to this situation.

If laws had changed the conditions of employment discrimination, there would be little need for subsequent action today. But the employment picture for our society indicates that the groups victimized by discriminatory employment practices still carry the burden of that wrongdoing.

Unemployment for blacks, Spanish surnamed Americans, and other minorities remains far higher than that of white America. For the past 15 years, the unemployment rate for nonwhites has been twice that for whites. The national rate in 1971 was 5.4 percent for white Americans, but 9.9 percent for blacks and other minority individuals. In 1969–70 the unemployment rates in New York City showed the following disparity: Whites in the city recorded a rate of 4.7 percent; blacks, 5.4 percent; and Puerto Ricans, 9.5 percent. Underemployment (part-time workers seeking full employment), another plague on minority job seekers, is also a real problem. A 1966 Government study found an underemployment rate of 29.1 percent in minority (black and Puerto Rican) neighborhoods of New York City.

The underemployment rates for minority Americans are not just a consequence of past discrimination. A look at youth employment rates refutes this argument. For white male adults, the unemployment rate is 4.0 percent; for white teenagers, it is 15.1 percent. However, the statistics for minority male adults show a rate of 7.2 percent; and for minority teenagers, a staggering 31.7 percent.[1]

In whole industries such as building construction, higher education, and government civil service, racial and ethnic minorities and women are consistently absent or found in disproportionate numbers in low wags, low status jobs.[2]

Income is another measure of the job discrimination suffered by minority Americans. In 1971 the median family income for whites was $10,672 compared with $6,440 for non-writes, and $7,117 (1970 figure) for Spanish surnamed Americans. The discriminatory effects on minorities is obvious when one considers that 32 percent of blacks were below the low income level (poverty line) in 1971. Including Spanish surnamed Americans, Indians, and other minority groups, the figure declines slightly to 31 percent. But the number of white Americans living in poverty is only 8 percent. The receipt of public assistance is another indicator of the economic status of minority citizens. While 4 percent of the white population receives public assistance, 25 percent of the minority population receives aid. In toto, 6.4 million blacks, and other non-white persons, rely upon public assistance in order to survive.[3]

[1] U.S. Commission on Civil Rights, Job and Civil Rights 5 (1969). U.S. Commission on Civil Rights, Demographic, Social and Economic Characteristics of New York City and the New York Metropolitan Area 10–12 (1972). U.S. Department of Labor, Bureau of Labor Statistics, The Social and Economic Status of the Black Population in the United States, 1971, 52, 53.

[2] In the construction trades, new apprentices were 87 percent white, and 13 percent black. For the Federal Civil Service, of those employees above the GS–5 level, 88.5 percent are white, 8.3 percent black, and women account for 30.1 percent of all civil servants. Finally, a 1969 survey of college teaching positions showed whites with 96.3 percent of all positions. Blacks had 2.2 percent, and women accounted for 19.1 percent.

The mechanisms created by Title VII alone cannot handle the dimensions of the problem. In FY 1972 the EEOC received 38,840 complaints; it expects 45,000 new complaints during the next fiscal year. The growing backlog of cases is now 53,410, 43,101 of which are pending investigation. Conciliation enforcement and litigation against employment discrimination cannot receive EEOC priority in such a situation.

The benefits of a Federal contract compliance program to accompany EEOC activities are impressive. Fully one-third of the Nation's labor force is employed by companies which are Government contractors. These companies are among the Nation's largest and most prestigious business firms and institutions. The ending of discriminatory employment barriers in this sphere of the Nation's economic life would go far to redeem the pledge of nondiscrimination contained in the Civil Rights Act of 1964.

Over the last years the Nation has been witness to this shift in equal employment opportunity policy from the enacting of legislation to the implementation of nondiscrimination laws. In its wake the move has given rise to a debate concerning the parameters of affirmative action and the possible sanctioning of quota systems and reverse discrimination to achieve nondiscriminatory employment.

To offer a Commission view of this issue, the Commissioners have prepared this Position Statement for public discussion and official consideration. Part I is a survey of the present status of the law and the basis for affirmative action. Part II is a review of certain terms relevant to this area—a look at what affirmative action is, and what it is not. Part III is an effort to respond to certain questions that inevitably evolve out of such discussions. And Part IV discusses the policy considerations invoked by the affirmative action issue and proposes ultimate objectives for nondiscrimination in employment nationally.

PART I

Federal, State, and local laws prohibit employment discrimination by employers, labor unions, and others. Where discrimination has occurred, the law requires that all continuing discriminatory effects be remdied.[4] However, intentional discrimination, such as job assignment by race, is but the tip of an iceberg. Racial and ethnic divisions in society have translated themselves into institutions which systematically deny equal employment opportunity to minority persons. Similarly, traditional and outmodel views of the role of women give rise to widespread patterns of employment discrimination on the basis of sex. Accordingly, one of the most pervasive forms of employment discrimination is "systemic discrimination" i.e., discriminatory practices—most, but not all, unintentional—built into the systems and instructions which control access to employment opportunity.

While erecting formidable and, at times, insurmountable barriers to minorities and women seeking employment, the effect of this has been to create a substantial preference for white males irrespective of their relative qualifications vis-a-vis members of the excluded groups. Viewed in this context affirmative action programs are designed not to establish preferential treatment for minorities and women. Rather, the purpose of such programs is to eliminate the institutional barriers that minorities and women now encounter in seeking employment and thereby to redress the historic imbalance favoring white males in the job market. The elimination of these disparities in employment opportunity is absolutely essential if the polarization with which the Nation is now afflicted is ever to be eradicated. Effectuation of affirmative action programs is, therefore, truly in the national interest.

U.S. Department of Commerce, Bureau of the Census, Selected Characteristics of Persons and Families of Mexican, Puerto Rican and Other Spanish Origin: March, 1971.

[4] Thus, for example, a common discriminatory has been the assignment of minority workers to certain departments of a particular business. Under Title VII of the Civil Rights Act of 1964, the Federal courts require that such employees be given special remedial rights to transfer into departments from which they previously were excluded. *Papermakers and Paperworkers, Local 189 v. United States*, 416 F. 2d 980, 988 (5th Cir. 1969), *cert. den.*, 397 U.S. 919 (1970).

Affirmative action programs are aimed at, among other things, eliminating the existing discriminatory barriers to equal employment opportunity.

Some common examples of discriminatory barriers to equal employment opportunity are:

> Instances in which an employer or union rely upon word of mouth contact for recruitment, minority persons who have less acces than other persons to informal networks of employment information, such as through present employees or officials, are denied equal access to available opportunities.
>
> Recruitment at schools or colleges with a predominantly nonminority or male makeup is discriminatory when comparable recruitment is not done in predominantly minority or co-ed institutions.
>
> Rules against employment of married women and rules providing for the automatic termination of employment upon pregnancy amount to unwarranted discrimination against women.
>
> Job qualifications which are not substantially related to job requirements unfairly penalize minority persons with limited education or job experience.
>
> A past history of discriminatory practices continues to deter minority applications until the employer has clearly demonstrated that equal employment opportunity is being achieved.

There has been a growing awareness in recent years of these problems, and widespread adoption of remedies to deal with them. Despite these efforts, both intentional discrimination and systemtic discrimination remain widespread. Moreover, a point of even greater significance is that the *consequences* of years of such discrimination in the past remain. As long as the consequences of past discrimination—e.g., the employment opportunity preference in favor of white males—persist, the necessity to redress the imbalance continues.

These, then, are the considerations which underlie the need for remedial "affirmative action".

As part of the Civil Rights Act of 1964, Congress enacted Title VII of the act which makes it a violation of Federal law for an employer, labor union, or employment agency to discriminate against an employee or prospective applicant because of race, color, ethnic origin, religion, or sex. To enforce this new law, Title VII established an Equal Employment Opportunity Commission with the power to investigate complaints, conciliate, and recommend the initiation of civil action by the Department of Justice.[5]

In addition to Justice Department instituted procedings, Title VII permits the complainant to initiate suit in Federal court if EEOC conciliation fails.

In cases arising under Title VII, the Federal courts have established that where the proportion of minorities employed by the defendant employer is less than that which reasonably would be expected on the basis of the availability of qualified minority group members, a presumption of discrimination arises. *United States* v. *Ironworkers Local 86*, 443 F. 2d 544, 550–551 (9th Cir. 1971), cert. den., 404 U.S. 984 (1971); *United States* v. *Hayes International Corp.*, 456 F. 2d 112, 120 (5th Cir. 1972); *United States* v. *United Brotherhood of Carpenters and Joiners, Local 169*, 457 F. 2d 210, 214 (7th Cir. 1972). The burden is shifted to the defendant to demonstrate that such underutilization is not the product of discrimination. *Id.*

If the Federal court reaches a finding of employment discrimination under Title VII, it may "order such affirmative action as may be appropriate, which may include reinstatement or hiring of employees, with or without back pay." Section 706(g), Title VII. Because of the significance of the *consequences* of years of past systematic discrimination, the legal wrong ends only when all the consequences of past discrmination have been eliminated by the employer.

---

[5] Under Title VII, as amended by the Equal Employment Opportunity Act of 1972, the EEOC has jurisdiction over those businesses engaged in interstate commerce that employ more than 25 employees. As of March 24, 1973, the jurisdictional number will drop to 15 employees as provided by the 1972 amendments. Coverage was also extended to include employment by State and local governments, and educational institutions exempt under the 1964 legislation. This extension was effective as of March 24, 1972.

The EEOC was also empowered to initiate legal actions in Federal court against violators of EEOC orders, and the courts were authorized to issue cease and desist orders enjoining unlawful employment practices when a violation of the law has been proven. This EEOC court enforcement power applies to discrimination by private employers only. The Department of Justice is responsible for enforcement of Title VII against public employers and educational institutions. Public Law 92–261 (March 24, 1972).

The number of cases which can be tried by Federal courts of administrative tribunals is small compared to the pervasive nature of employment discrimination. Responding to this void, the Federal Government over the last decade has promulgated a series of Executive orders that provide for nondiscriminatory employment by Federal contractors, and construction contractors on federally assisted projects. The current order is E.O. 11246.

The use of affirmative action remedies is basic both to Title VII and to Executive Order 11246. Thus, for example, when the court in an action under Title VII determines that the defendant has discriminated in violation of the Title, the court will order the employer to undertake affirmative action which will remedy the discriminatory consequences of past discrimination and prevent the recurrence of such discrimination in the future.

A principal difference between Title VII and Executive Order 11246 is that the Executive order imposes upon Federal contractors the duty to make a *self-determination* as to the need for affirmative action, without resort to a judicial determination. Thus, the keystone of the "affirmative action plans" which Federal contractors are required to adopt, is the self-analysis performed by the contractor.

Like other affirmative action requirements applicable to Federal contractors, this "self-analysis" requirement appears in regulations promulgated by the Office of Federal Contract Compliance (OFCC) of the United States Department of Labor (41 CFR 60). The regulations require:

> An analysis of all major job classifications at the facility, with explanation if minorities or women are currently being underutilized in any one or more job classification . . . . 41 CFR 60-2.11(a).

The regulations define "underutilization to mean

> having fewer minorities or women in a particular job classification than would reasonably be expected by their availability. *Id.*

While the regulations afford guidance in making the determination of "underutilization" (see 41 CFR 60-2.11(a)(1)), the determination is of necessity an approximate one. The determination will depend upon the industry of the contractor, and the location of the facility or institution. While it is probably that minority underutilization will include blacks, women, and Spanish surnamed individuals, it is quite possible that, in some locations, Jews, Asian Americans, ethnic Europeans, and Indians will be underutilized minorities for some Federal contractors.[6] Nonetheless, the crucial point to bear in mind is that patterns of systemic discrimination have been so pervasive that gross and unmistakable underutilization is a common occurrence.[7] As the OFCC regulations point out, this is most likely to be the case in such categories as officials and managers, professional, technicians, sales workers, office and clerical staffs, and skilled craftsmen. (See 41 CFR 60-2.11).

Once a pattern of underutilization is identified, the next step is to assess the obstacles (generally, form of "systemic discrimination" such as those described above) which have produced it, and to design corrective aaffirmtive action accordingly. (41 CFR 60-1.40; 60-2.24).

The kinds of affirmative action which may be appropriate are as diverse as the forms of systemic discrimination themselves. The OFCC regulations (41 CFR 60-2.24) list a host of affirmative actions which may be appropriate. These include actions in the area of determining qualifications, recruitment, training, promotion, counseling, and other areas.

The absence of a court order does not permit employers to legally continue otherwise discriminatory employment practices. All employers covered by Title VII and all Federal contractors covered by E.O. 11246 have a legal obligation to obey the law, and thus take steps to eliminate any discriminatory employment practices that may persist in their businesses or institutions. Since continuation of discriminatory practices may eventually give rise to an EEOC action or private litigation with its concomitant remedies of reinstatement, back pay, affirmative recruitment, proportionate hiring, etc., common sense and sound legal advice should compel the employer to take such steps. Thus, the employer would be well-advised to eliminate unlawful practices himself as opposed to awaiting future court or administrative action. Given the polarization which stems, in part, from the existing gross disparaties in employment opportunity, such steps are not only legally proper but are also consonant with sound management principles.

---

[6] The Federal Regulations for the implementation of E.O. 11246, known additionally as "Revised Order No. 4," do not provide a comprehensive definition of the terms "minority" or "minority group." The Regulations do provide some limitation on the terms by referring to the affirmative action program's beneficiaries as "members of an 'affected class' who by virtue of past discrimination continue to suffer the present effects of that discrimination." 41 CFR 60-2.1. Thus, the term "minorities" applies generally to blacks, Indians, and Spanish surnamed Americans. In certain contexts, depending upon the geographic area and a past history of discriminatory practices, Asian Americans, Jews, and white ethnic groups may also be deemed "minorities" within the meaning of 41 CFR 60-2.10, 60-2.11.

[7] In the absence of such gross and unmistakable underutilization, discrimination and/or the present effects of past discrimination would, of course, have to be shown as the basis for any affirmative action effort.

1. Employer A never has had to recruit employees for an 800-person industrial plant engaged in interstate commerce. An abundant number of applicants always has been produced through word-of-mouth references from present employees. Because the employers' work force is all-white the applicants obtained by employee word-of-mouth are similarly all-white. Despite an abundance of present white applicants, and despite the expense involved, the employer nonetheless embarks on an intensive recruitment campaign, directed specifically at areas of minority residential concentration.

Such remedial recriutment efforts are directly supported by judicial decisions. In *Parham* v. *Southwestern Bell Telephone Company*, 433 F. 2d 421 (8th Cir. 1970), the court held that an ostensibly nondiscriminatory method of recruitment—by word-of-mouth through present employees—comprised illegal discrimination. See also, *Lea* v. *Cone Mills Corp.*, 301 F. Supp. [illegible]7 (M.D.N.C. 1969), *aff'd in part and vacated in part on other grounds per curiam*, 438 F. 2d 86 (4th Cir. 1971) ; *Clark* v. *American Marine Corp.* 304 F. Supp. 603, 606 (E.D. La. 1969).

In these circumstances, affirmative efforts to recruit minorities are necessary to counterbalance the pro-white bias inherent in word-of-mouth recruitment through a predominantly white work force.

The United States Supreme Court has stated a more general rule, of which the above case is an application. In a case pertaining to tests used in appraising applicants, the Court held that ostensibly "objective" criteria for employment or promotion are discriminatory if they result in a relative disadvantage for minority persons, without being plainly compelled by business necessity. *Griggs* v. *Duke Power Co.*, 401 U.S. 424 (1971).

2. In designing an affirmative recruitment campaign, the president of State College B, an institution with numerous HEW research contracts, may learn that the dearth of professional minority personnel employed at the college is due in substantial part to the fact that the college has a history in the black community as one which traditionally has not employed black faculty and staff. Although under no judicial compunction to take remedial action, the president may, nevertheless, conclude that the college is in a situation which requires remedial action. Such action typically involves affirmative steps assuring the minority community that the institution will afford minority applicants meaningful equal employment opportunity and that employment of qualified minority applicants will not be limited to mere token representation. To achieve such assurance the president of State College B might well embark upon a program designed to increase the pool of minority applicants for positions at the school and involving, at least for a limited period of time, a program of hiring a reasonable ratio of minority applicants.[8]

The premise of ratio hiring is that the employer has a pool of applicants—including whites and minorities—who are qualified for the job in question. The rationale of *Carter* v. *Gallagher* is that such ratio hiring will provide an assurance necessary to overcome the deterrent effect which past discriminatory practices have had upon minority applicants.[9]

---

[8] The principle here involved has been enunciated as follows: Given the past discriminatory hiring policies of the Minneapolis Fire Department, which were well known in the minority community, it is not unreasonable to assume that minority persons will still be reluctant to apply for employment, absent some positive assurance that if qualified they will in fact be hired on a more than token basis. *Carter* v. *Gallagher*, 452 F. 2d 315, 331 (8th Cir. 1972).

[9] The same remedial principle of ratios was adopted by the court in *Local 53* v. *Vogler*, 407 F. 2d 1047 (5th Cir. 1969), requiring a union, which in the past had discriminatorily excluded minorities from membership to refer for employment—in its capacity as hiring hall—whites and blacks on an alternating basis. The one-for-one formula has been used in other Title VII cases as well. See, also upholding a one-for-one ratio: *NAACP* v. *Allen*, 340 F. Supp. 703 (M.D. Ala. 1972) (hiring of Alabama State police); *United States* v. *Local 10 Sheet Metal Workers*, 3 CCH EPD 8068 (D. N.J. 1970) (referral of temporary apprentices or seasonal help); *United States* v. *Central Motor Lines*, 325 F. Supp. 478 (W.D.N.C. 1970) (hiring of road drivers) entered on stipulated facts; *Coffey* v. *Brady*, No. 71–44–Civ–J (M.D. Fla. 1971), (hiring of firemen). A one-for-two ratio was upheld in *United States* v. *Ironworkers, Local 86*, 443 R. 2d 544 (9th Cir. 1971), *cert. den.* 404 U.S. 984 (1971).

The ratio hiring principle of these cases may be used by the president of the college in the design of the school's affirmative action program. Thus, the college may determine that it will be approximately two months before its recruitment efforts pay off in terms of substantial numbers of minority applicants. Inasmuch as hiring needs are flexible, the employer may determine to defer a certain proportion of hiring until he has a substantial number of qualified majority and minority applicants. Such an affirmative action program by State College B would be goal-oriented within the framework of E.O. 11246.

It may be argued, as it was in *Carter*, that such ratio hiring does violence to the concept of "first come, first served," thereby violating the constitutional rights of white applicants already on a qualified list. But the very essence of affirmative action is that white males have the "inside track" to the job opportunities (for example, through word-of-mouth channels) and that—until affirmative recruitment has taken hold sufficiently to overcome that advantage—the first come, first served principle will continue to give a discriminatory advantage to whites. Moreover, in some contexts, the first come, first served principle has no real meaning. In the case of construction employment, for example, the allocation of job opportunities among nonunion (often predominantly minority) and union (often predominantly white) sources often must be done through a process of deliberate allocation, there being no mechanism for hiring on a first come, first served basis equitably between the two sources.

Another common misconception is that affirmative action does violence to the concept of preferring the "better qualified" applicant. Proponents of this view maintain that, if an applicant has made a higher score on the employer's aptitude test, or if he has more years of education, he should be preferred as "better qualified" than another applicant who—while eminently qualified for the job—has a lower score or less education. But often comparative test scores or years of education do *not* accurately measure the applicant's ability to perform the job. Moreover, minorities and women have suffered decades of discrimination both in employment and in opportunities to obtain the education and training that are requisites for many jobs. The use of standards unrelated to the duties of the jobs being sought and having the effect of depriving such admittedly qualified persons from obtaining such jobs thus perpetuates discrimination. Accordingly, the courts have recognized that job standards must *realistically* and *specifically* be fitted to the jobs for which they apply. *Griggs* v. *Duke Power Co.*, 401 U.S. 424 (1971) (holding that the "qualified" standard must be applied in a strictly job-related context).

3. The ratio hiring required in *Carter* v. *Gallagher*, it was noted, was predicated on the need to provide an assurance to minority employees that they will, in fact, be hired on a more than token basis. A similar kind of assurance may be necessary for affirmative recruitment to be successful wherever the likelihood of new employees being laid off is of major concern. Thus, where the last-hired, first-fired principle is applied, this may provide a serious obstacle to affirmative action recruitment—especially in industries subject to employment fluctuations. By shortening the work week for all employees, by giving a special period of guarantee against lay-off for affirmatively recruited employees, or by other means, the adverse effects of the lay-off threat upon affirmative recruitment may be limited. This can and should be done without being used as a basis for discharging present employees to make room for minority applicants.

4. Hospital C, another Federal contractor, notes that while minorities are applying in increasing numbers, many cannot meet the criteria established for entry job classifications. In addition to carefully screening and "validating" such criteria, the employer also may expand the range of employees he is able to hire by instituting programs of entry-level training. There are a variety of programs administered by the Department of Labor, under the Manpower Development and Training Act, pursuant to which an employer may receive Federal financial assistance in support of such programs.

While such affirmative action training opportunities, of course, are not restricted to minorities, it is entirely appropriate for such programs to be aimed principally at them. Thus, for example, the hospital can recruit for the program principally in central city, heavily minority areas. Equally basic to the MDTA training scheme is the relationship between identity as a minority individual and qualification as a "disadvantaged person". In order to qualify for MDTA on-the-job training assistance, an employee must have been identified as a "disadvantaged person" by the local employment service or Concentrated Employment Program. One of the indicia of being a "disadvantaged person" (when coupled with another factor such as youth, lack of education, poverty, etc.) is minority status. Closely related to MDTA on-the-job training programs, may be a restructuring of jobs, so as to create "job ladders", up which the disadvantaged are better able to rise.

5. Employer D, a medium size corporation listed on the New York Stock Exchange, is considering a shift of its facilities from the central city to a suburban area. The employer carefully weighs the impact of the move upon minority employees.

As a Federal contractor, subject to Executive Order 11246, the contractor is required to assure that the move would not have an adverse disparate effect upon minority employees. The General Counsel of the Equal Employment Opportunity Commission has taken the position that the same requirement of affirmative action arises under Title VII. Thus, the EEOC General Counsel has stated:

> The transfer of an employer's facilities constitutes a *prima facie* violation of Title VII if (1) the community from which an employer moves has a higher percentage of minority workers than the community to which he moves, or (2) the transfer affects the employment situation of the employer's minority workers more adversely than it affects his remaining workers, and (3) the employer fails to take measures to correct such disparate effect.[10]

Thus, under both Executive Order 11246 and Title VII, the employer must recognize barriers to minority access to employment in suburbia as an instance of "systemic discrimination", which must be combatted by affirmative action measures.

6. As a final example, among the requirements used by employer E, a Federal contractor, selecting applicants for employment is that they have no police record. Employer E has utilized this policy because he is convinced that, as a group, persons without police records make better employees than those with police records. In addition, some of his employees have stated support for this policy, indicating they feel it a protection to them. Nonetheless, noting that minority applicants are much more likely to have police records than are white applicants, and therefore are rejected in disproportionate numbers because of this fact, employer E determines to discontinue the requirement.

Judicial decisions squarely support this course; indeed, they state that it may be mandated under Title VII of the Civil Rights Act of 1964. Thus, in *Gregory* v. *Litton Systems*, 316 F. Supp. 401 (D.C. Ca. 1970), the court ruled that it constituted unlawful discrimination for an employer to reject employees with arrest records, since this resulted in the rejection of a disproportionately large number of minority applicants, without adequate justification in business necessity.[11]

The United States Supreme Court has stated a more general rule, of which the above case is an application. In a case pertaining to tests used in appraising applicants, the Court held that ostensibly "objective" criteria for employment or promotion are discriminatory if they result in a relative disadvantage for minority persons, without being plainly compelled by business necessity. *Griggs* v. *Duke Power Co.*, 401 U.S. 424 (1971); *U.S.* v. *Hayes International Corp.*, 456 F. 2d 112, 118 (5th Cir. 1972).

PART II

To state the law fairly is one thing, to administer it fairly may at times be a very different matter. The law relevant to employment discrimination is clear and receives few arguments. But the administration of Title VII and especially E.O. 11246 have given rise to a number of terms and concepts that have made its administration a controversial issue. Thus, this Commission finds it necessary to conscientiously define the concepts that it endorses to overcome the past and possible consequences of employment discrimination.

We have defined "affirmative action" as steps taken to remedy the grossly disparate staffing and recruitment patterns that are the present consequences of past discrimination and to prevent the occurrence of employment discrimination in the future. In order to properly undertake an affirmative action program under E.O. 11246 the Federal contractor must analyze its employment patterns and "utilization" of minorities and women.[12]

---

[10] EEOC Memorandum, General Counsel to Chairman, July 7, 1971, at 2. This is the same principle as that declared in *Norwalk CORE* v. *Norwalk Redevelopment Agency*, 395 F. 2d 920 (2d Cir. 1968), where the court held that the relocation authority was required to recognize, and to take steps to overcome, the relocation problems special to minority relocatees.

[11] The discriminatory effect of rejecting employees on the basis of arrest records may be seen, for example, in the fact that minority persons, dwelling in high crime areas, are more likely to be arrested on "suspicion" than are other persons. Thus, nationally, while blacks comprise 11 percent of the population, they account for 45 percent of all "suspicion arrests." *Gregory* v. *Litton Systems*, 316 F. Supp. at 403.

Essential to an affirmative action program is the development of a comprehensive inventory of all employees by race, sex and ethnicity. Data should be collected by organizational unit and by pay grade. It is important that figures be collected concerning the number by race, sex, and ethnicity of job applicants, accepted and rejected, including the reasons for rejections, promotions, training opportunities offered, terminations, awards, transfers, and other matters relating to employee work conditions. These figures should be compared for each job category with estimates which are made of the availability of women and each minority group within the recruiting area designated.

Similarly an employer must determine the recruitment, hiring, and promotion standards and practices which govern the operation of each organizational unit. It is important to determine if any of these factors have the effect of denying equal employment opportunity and benefits to persons on a basis of their race, sex, or ethnicity. To the extent that these studies demonstrate that a problem exists with regard to the utilization of minority groups and women by the employer, then the matter must be treated in the same manner as other management questions. Goals, which are reasonably attainable by applying good faith efforts, should be established to overcome the underutilization. The goals should be based on such matters as employee turnover rate, rate of new hires, as well as upgrading and promotion actions. It is well recognized that the setting of goals provides a valid bench mark against which progress can be measured and the need for further action diagnosed.

Although it is possible that underutilization results from one practice of an employer, it is more likely that a number of accepted and institutionalized practices have caused an exclusion of women and minority groups from fair opportunity for employment. In the course of identifying areas in which minorities and women have been discriminated against, whether intentionally or inadvertently, an employer must first examine the recruitment and hiring policies and practices. Recruitment and hiring are two parts of one process whereby employees are brought into the work force, yet each have special problems which must be examined and dealt with separately.

Recruitment is the process by which an institution develops an applicant pool from which hiring decisions are made. It can be an active process, in which the employer seeks to communicate employment needs to candidates through advertisement, word-of-mouth, notification to schools or training institutes, conventions or job registers. Recruitment, however, may also be a passive function, the evaluation or inclusion in the applicant pool of only those persons who on their own motion or by unsolicited recommendation apply to the employer for a position.

Where underutilization is attributable to the fact that the number of minorities recruited is lower than the size of the available number of qualified persons within the minority labor force in the employer's recruitment area, then a strengthened search network must be developed. Sources other than the traditional avenues through which promising candidates have been located (e.g., professional journals, newspapers, and referrals from present staff and associates) must be utilized. These new sources would consist of individuals at predominantly minority colleges, minorities engaged in related industries and in government, minorities in training programs or engaged in research, minorities involved in community advocacy and development work.

Once a nondiscriminatory applicant pool has been established, the process of selection from that pool must itself be subjected to careful examination. All criteria used to select employees, whether or not they are discriminatory on their face, must be reviewed to determine if they hav a disproportionately negative effect on minorities. If so, they must be further examined to determine whether they are relevant to the duties of the particular position in question.

Tests must be validated to insure that they are both job related and not culturally biased. Other employment criteria must likewise be job related. This insures that they are not unnecessarily high and inadvertently discriminatory. Other selection techniques such as credit check, marital status considerations or arrest records must also be reviewed to determine if they cause a disparate result in employment patterns and whether they are objectively valid and job-related.

---

[12] See discussion of OFCC regulations, *supra*.

In many cases an employer would want to consider additional factors in evaluating an individual's potential contribution to the establishment as, for example, the value which diversity in perspective and life experience may contribute to an academic program or the extent to which services to a Spanish speaking or black service population might be improved by the employment of bilingual and bicultural staff. This does not imply that unqualified persons should be hired or that genuinely valid standards should be eliminated or diluted. It simply means that the criteria which have traditionally been used in hiring and promoting must be broadened to include consideration of minorities and women. Where the qualifications of such applicants are substantially the same or better than nonminority male applicants and where the recruitment involved is in an area of employment in which there has been a dearth of equal opportunity for minority and women applicants a substantial effort must be made to recruit minorities and women and thereby redress the imbalance.

The Federal contractor within the context of its own "self-analysis" identifies "goals and timetables" as part of the affirmative action program. Thus, the basis for affirmative action is the contractor's underutilization analysis of minorities and women, and underutilization that under existing case law raises a presumption of employment discrimination.

The employer's affirmative action plan "goals and timetables", then set out the numerical increase in minority and female employment, by job classification, which the contractor aims to achieve in correcting identified underutilization.

As we have noted, one aim of affirmative action is to assure against the continuation of discriminatory practices. Another aim is to redress patterns of minority and female underutilization. The best test for determining whether these aims are being achieved is by a results test. Whether expressed in terms of applications, hires, or promotions, the results test is the best indicator of whether women and minorities *in fact* are achieving the access to employment opportunities required pursuant to the twin aims of affirmative action.

In essence, equal opportunity goals and timetables are no different from the performance goals familiar in many business contexts—for examples in sales campaigns. In all such instances, the key to effective management is a reasoned determination of what results ought to be achieved. Those targeted results then become the foundation for supervisory determinations as to when the ongoing effort should be strengthened. Thus, for example, if sales figures drop below targeted goals, this sounds a signal for corrective action. Similarly, if minority or women hires fall below targeted goals, this is a signal for a careful examination of whether systemic barriers to equal employment opportunity have been overcome, and whether more satisfactory progress can be made in redressing patterns of underutilization.

The crucial factor to be kept in mind with respect to goals and timetables is that they are a complement to affirmative action. They comprise a guide to determine whether the affirmative action plan is working. The ultimate legal obligation of the employer is *not* to achieve the established goals, but "the results which could reasonably be expected from [the contractor's] putting forth every good faith effort to make his overall affirmative action program work." (41 CFR 60–2.12(a)).

Thus, for example, the opinion of the Attorney General of the United States upholding the "Philadelphia Plan" for remedying the effects of past discrimination in the construction industry, 42 Op. Atty. Gen., N. 37 (1969), makes clear that the key question in the use of "goals" for increasing minority employment pursuant to the Plan, is whether "good faith efforts" have been made to achieve such goals.

As we have seen, there is an enormous range of possible affirmative action steps, each of which can be pursued with varying degrees of intensity and resource commitment. Because of this open-ended nature of affirmative action, it is virtually always possible for the employer to readjust performance upwards to assure adequate results. For this reason, "goals and timetables" are necessary for meaningful evaluation of equal employment opportunity efforts.

PART III

The Commission's position regarding the implementation of affirmative action by Federal contractors can be stated as responses to some commonly asked questions about this subject.

Question 1. Are not goals and timetables the same as quotas for racial, ethnic, and sex groups?

Answer. No. The essential difference is that under a quota system a fixed number or percentage of minorities or females is imposed upon the employer who has an absolute obligation to meet that fixed number. No excuses are accepted, nor can failure to meet the quota be justified.

Goals and timetables, by contrast, are result-oriented procedures by which the employer—subject only to the requirement that the targeted results are as much as reasonably can be expected—determines goals and a time schedule for correcting minority underutilization, and then makes every good-faith effort to achieve the self-imposed goals. Contrary to what would be true in the case of quotas, failure to meet goals and timetables is excused if the employer can show that good-faith efforts have really been made. However, an employer must be prepared to demonstrate in detail why good-faith efforts failed to produce desired results.

In a sense goals and timetables represent a shifting of the burden of proof from the government to the employer on the question of whether or not the employer used good-faith efforts to hire more minority individuals and women.

Question 2. Why are goals and timetables necessary?

Answer. The necessity for goals and timetables arose out of long and painful experience in which lip service to equal employment opportunity was paid by employers who then did little to correct the situation. It also arose out of the realization that *procedures* for assuring equal employment opportunity can accomplish little unless they are tied closely to results.

After generations of intentional and systematic discrimination against minorities and women, the pattern of unequal employment opportunity persists. Although intentional discriminatory practices are now illegal, many systemic practices still exist that limit the opportunities available to minorities and women. Patterns of employment have become firmly established creating many positions that minorities and women no longer even try to fill. Accordingly, if they are truly to get a fair deal in the job market, there is a compelling need for an effective program of affirmative action assuring women and minorities that meaningful equal employment opportunity—not mere tokenism—is what they can reasonably expect. To achieve such assurance employers must *affirmatively* seek out minorities and women and place them in jobs for which they are qualified but from which they have long been excluded. To bring about such affirmative action is precisely what goals and timetables are intended to do.

Question 3. Do not goals and timetables result in hiring on the basis of race or sex, rather than on the basis of who is best qualified for the job, thereby undermining the merit system?

Answer. No. There is a myth abroad that, in years past, hiring decisions always were made on the basis of objective and proven methods for assessing applicants' "qualifications." In fact, the hiring decisions of many if not most, employers were based in large measure on subjective and unproven criteria. As a result, racial and sexist stereotypes operated to exclude women and minorities without regard for their actual qualifications. Indeed, such criteria in some degree were institutionalized within the "merit system" itself. For example, under the well established "rule of three," public employers have been free to use subjective and unsubstantiated criteria in selecting among the top three candidates for a post. Following the principle of the *Griggs* case (discussed above), therefore, a major affirmative action step to be taken in achieving minority employment goals is to assure that job qualifications *are* accurately appraised. Thus, if a hiring standard disproportionately excludes women or minorities, the employer can use that standard only if such standard demonstrably assesses qualifications for the job. This does not weaken, but rather strengthens, the role of applicant "qualifications" in determining employee selection.

Question 4. Do not affirmative action plans establish preferential treatment for minority groups and women?

Answer. No. On the contrary their purpose is to undo a preferential system many years in the making and to redress the historic imbalances now favoring white males in the job market.

Redressing this imbalance requires that discriminatory patterns be eradicated and some measure of equity be established for persons who have been discriminatorily excluded in the past. Implementation of affirmative action plans must, therefore, necessarily involve a selection process aimed at achieving these goals.

For the purpose of remedying discriminatory practices, a selection process designed to achieve such goals is a valid technique so long as it does not produce a pattern of discrimination against qualified members of another group. The fact is that very few persons are ever hired on a totally objective basis. Even the Civil Service Merit system rarely requires the selection of a *specific* person from among a group of qualified applicants. The requirement is that from among such a group *a* person be selected. Obviously many subjective elements then enter into the selection process. The candidates personality, disposition, experience, apparent judgment, are just a few of the elements that always influence a selection. Unfortunately, a significant reason for the paucity of minority group persons and women in many job categories is that these subjective factors never included providing a fair share of employment opportunities to them.

An affirmative action plan must require some action that has not heretofore taken place otherwise it is useless. One of the requirements therefore is that in the subjective evaluations that always occurs in the selection process one factor previously excluded should now be included—a concern that a reasonable number of qualified minorities and women be hired until equity is attained.

Question 5. Are goals and timetables aimed at achieving proportional representation of minorities and women?

Answer. The concept of goals and timetables is *not* synonymous with proportional representation. Rather, the concept comes into play when it has been determined that women or minorities are underutilized or underrepresented in one or more job classifications. When underutilization has been established, affirmative action programs (as already described) are employed to bring minorities and women into the labor force in the numbers that "would reasonably be expected by their availability." Goals and timetables may be viewed as the measure or yardstick to determine whether the affirmative action programs are, in fact, achieving the goals of increasing the number of women and minorities in the labor force.

The concept of goals and timetables often conjures up an image of some precise mathematical division of a pie whereby each group or subgroup gets a share dependent upon the size of the group. But the concept in no way depends upon a precise mathematical formula. Rather, it focuses on the demonstrable results of past discrimination (the underutilization) and seeks to remedy that by compensatory programs (affirmative action). The "goal" that we refer to is nothing more than a description of what the labor force would look like absent the effects of illegal racial or sexual discrimination, and the "timetable" is the informed estimate of time needed to achieve the discrimination-free labor force without disrupting the industry or denying anyone the opportunity for employment.

PART IV

The moral and ethical imperatives of affirmative action in employment should need no further expansion. This need, we trust, was accepted by the American public long ago. This Commission, however, is concerned that in the current economic situation effective implementation of affirmative action will require greater—not less—commitment to the goal of equal opportunity in employment. And, with the unemployment of minorities twice as high as that of whites, with underemployment showing an even greater gap, the Commission feels the necessity to again call to the attention of the American public its obligations to create an equitable society for all.

Equity cannot be obtained without the application of effort and, in some cases, unusual measures. The measures now enacted into law or issued as Executive orders are not so unusual either in substance or in general practice as to evoke resistance on the part of Americans to adhere to them. This is as true in the employment of persons to serve in the Federal Government as it is private employment. In fact, it is incumbent on the Federal Government to establish the pattern and set the pace. We believe that where quotas as defined in this statement have been established without a judicial finding of discrimination such practices should cease. Goals and timetables, as defined in this statement are, we believe, fair and equitable. They represent the minimum measures necessary to assure that all Americans can be assured of equal treatment under the law. It is not complimentary of the American society to find it necessary to *require* any action designed to provide all citizens an equal opportunity to use their energies and their talents.

Unfortunately, in the immediate future the test of our commitment to the principles upon which the Nation stands may be less related to our willingness to voluntarily do what is right than to our acquiescence in following the law as it is written.

[From the Spokeswoman, Aug. 15, 1974]

Affirmative Inaction on Campus: Will the Real Victims Please Stand Up?

University faculties sinking into mediocrity; women and blacks paid higher starting salaries than well-qualified white males; institutions forced to play "musical chairs," pirating token minority appointees from one another to stay in compliance: these are some of the dangerous side effects of affirmative action on campus according to a report by Dr. Richard A. Lester published June 28, 1974 under the auspices of the Carnegie Commission on Higher Education. Lester studied the implemenation of affirmative action programs over a five-year period at twenty leading institutions with large federal contracts. He concluded that affirmative action is "a statistical system that deals more with the hiring of typists, bricklayers and punch press operators." Carnegie Commission chairman Clark Kerr, in a peface to the report, agreed that federal guidelines fail to take into consideration the inadequate supply of qualified people in seeking to impose "numerical hiring goals that often have little relevance to the character and mission of the universities."

Resistance to HEW's demands for compliance with equal employment guidelines began with the first complaints filed in 1971. Universities have often seen themselves as privileged systems in which general economic and political laws do not hold, and have based their resistance on this view. That Dr. Lester's "new" findings echo the old academic fears is shown in Gertrude Ezorsky's May, 1974 article in *The New York Review of Books*, "The Fight Against University Women." Hiring goals, the heart of affirmative action, are seen as a direct threat to the merit system that is supposed to operate in the universities. Merit, determined by standards best understood by the departments concerned, is no respecter of race or sex, and should therefore suffice to insure equal treatment of applicants. In fact, say Ezorsky and others, department chairmen typically ask old professors to recommend candidates; unsolicited applications fare badly under this "old boy" system. The claim that there aren't enough qualified applicants is also untrue. Ezorsky admits relevant differences in the position of women among other underutilized groups: less that 1% of Ph. D.s are black, and there is correspondingly strong competition for black candidates. But in 1972 one in eight Ph. D.s was a woman, while women were only one in fifty full professors at major universities. In 1968, 26% of Ph. D.s awarded in psychology at major institutions went to women, as well as 20% in zoology, 21% in biochemistry, 13% in history and 11% in philiosophy. In 1968–69 Berkeley had 163 men filling 163 positions in these disciplines. In 1960, Harvard awarded 10% of Ph. D. in arts and sciences to women, and in 1969 19%. Of 484 senior Harvard faculty members in 1969–70, 483 were men. There are plenty of women Ph. D.s from high-prestige institutions. Unless these universities believe the degrees they give are worthless, they can only explain the under-utilization of women by saying that 1) women don't want to teach after they get the degrees or 2) that family pressures reduce ambition and output and thus justify low salaries and slow promotion rates. Ezorsky calls the rationalization of "family responsibilities" one of the most pervasive and pernicious, and gives it a name of its own: "famrat." Famrat doesn't stand up to the facts, however: 90% of women Ph. D.s are employed, primarily in lower-ranking universities and at lower levels. A 1967 article in *Social Problems*, "The Woman Ph. D., a Recent Profile," found that married women Ph. D.s published as much or more than men Ph. D.s And L. R. Harmon's "Scientific Manpower Report No. 6" (1965) concluded from a study of more than 20,000 Ph. D.s that "women . . . Ph. D.s are superior to their male counterparts on all measures derived from high school records, in all . . . specializations" (page 60) and "earlier study found women Ph. D.s . . . brighter by any index . . . than men in the same . . . specialization." (pages 27–28).

Even if it *were* true that there aren't enough qualified women, the charge that affirmative action means hiring the unqualified is clearly false. There is also no support in law for paying minority appointees more than white males. At a conference held earlier this year at the University of Michigan, U.S. Representative Edith Green, author of Title IX of the Higher Education Amendments of 1972, refuted the idea of a quota system, saying that "quotas are the crudest form of mindless inequality." On the other hand, eliminating hiring goals would undermine what few gains have been made. Green outlined the current situation: there are 32,875 male full professors in the U.S., and 3,193 female: median pay for women professors is $11,000, for men $22,000; 69% of women enter college with a "B" average or better, 41% of men; in college men get more financial aid, in graduate schools all of the most important stipends go to men.

Affirmative action has in fact, then, effected little change in the status of women in higher education or in the mental attitudes and biases permeating white, male academia. And it is the institutions who have done the least who protest the loudest. Harvard has yet to come up with an affirmative action plan acceptable to HEW and still has its federal money (*The Spokeswoman*, August 15, 1973). Brooklyn College, which has refused since 1971 to act on HEW recommendations, still has its federal money. At the same time, HEW has accepted the good faith efforts of Rutgers, M.I.T., Princeton and other schools unable to meet their hiring goals.

Responding to Dr. Lester's report for Carnegie, Mary Lepper, director of the higher education division of HEW's Office of Civil Rights, took strong exception to the report's findings: "The charge that women and minorities are not prepared [to be] as potientially excellent educators as white males cannot be substantiated." One thing Dr. Lester, Representative Green and Dr. Lepper agree on is that there are grave flaws in the mechanics of affirmative action. Two and one-half years after Title IX was passed, HEW has just come up with guidelines for implementation (*The Spokeswoman*, July 15, 1974). The guidelines aren't much of a threat to educators: they're vague, leave many cases uncovered and, most important, make no provision for enforcement. As in the past, the burden of proof falls on the victims.

[From the New York Review, May 16, 1974]

THE FIGHT OVER UNIVERSITY WOMEN

(By Gertrude Ezorsky)

Four years ago, the first complaint of university sex discrimination was filed with the secretary of labor by a woman's organization called the Women's Equity Action League. WEAL requested that an Executive Order, which, as of 1968, prohibited sex discrimination by federal contractors, be enforced against universities. Millions of dollars in federal contracts were handed out every year to academic institutions which, as WEAL claimed, practiced extensive and vicious prejudice against women instructors and students. WEAL appended eighty pages of evidence for its charges and asked that HEW examine all universities and colleges holding federal contracts to see whether they were complying with the Executive Order.

Within six months complaints against more than one hundred academic institutions were filed by women's groups.[1] Under this pressure HEW's Office for Civil Rights began conducting reviews of the compliance of universities. Almost everywhere HEW found evidence of prejudice. The university administrators, in effect, had to promise to mend their ways or lose their federal allowances. Like other employers holding government contracts, they were required to draw up programs to eliminate discrimination in hiring.

The academic campaign against HEW on campus started on October 8, 1971, when Columbia's President William J. McGill, as *Life's* guest editor, complained that with "no prior warning" HEW had instructed Columbia "to get into [federal contract] compliance within thirty days or face a cut-off of federal funds." McGill's claim that Columbia had "no prior warning" was, as we shall see, utterly false. But within a few weeks Professor Sidney Hook of New York University was denouncing HEW's thirty-day edicts. While women's organizations were busy filing more university discrimination charges, Hook was busy telling university officials just what they wanted to hear: administrators "should not yield to [HEW] . . . ultimata."[2] Hook organized the Committee on Academic Non-Discrimination and Integrity, and in one article after another male professors wailed about HEW interference on campus.

These protectors of academic integrity against the HEW civil rights office use two kinds of argument. According to the first, university hiring practices are fine just as they are. Universities practice a "merit system" of employment.[3]

---

[1] *Discrimination Against Women*. Hearings before the Special Subcommittee on Education of the Committee on Education and Labor, House of Representatives, June, 1970 (hereafter *House Hearings*), pp. 298–314.

[2] *The New York Times*, November 5, 1971.

[3] "HEW and the Universities," *Commentary*, February, 1972 (hereafter HU), p. 40; "The Idea of Merit," *Commentary*, December, 1972 (hereafter IM), p. 45.

Since a merit system is, *by definition*, free of sex discrimination, HEW's pressure to hire and upgrade women faculty is superfluous and, if successful, would corrupt "standards of excellence."[4] This argument is consistent. Unfortunately, its premise—that universities practice a merit system—is false.

Not all HEW critics agree that academic hirings and firings are so fair or so virtuous. Some even grant (sometimes) that universities have treated women badly. But, they claim, HEW remedies have bad side effects. First, HEW investigators ignore university rights to due process (e.g., by issuing orders that universities must end discrimination within thirty days). Second, HEW insists on increased numerical *representation* of women on faculty—a numbers game that is said to be logically absurd since any other group could demand faculty representation. Finally, by requiring that the universities set numerical goals, HEW is allegedly imposing a quota system that causes reverse discrimination against men. As Charles Frankel, a philosopher, put it: "If you hire unqualified women . . . bright white males don't get jobs."[5]

Let us see if the claims of these academics against HEW stand up.

THE MERIT SYSTEM

Paul Seabury, a political scientist writing in *Commentary*, describes HEW's enforcement of the Executive Order as an "assault on the merit system" of faculty recruitment. If the universities complied with HEW's demands, this would, he said,

> compel a stark remodeling of their criteria of recruitment, their ethos of professionalism and their standards of excellence. . . .[6] Somebody . . . has to pay when the principle of merit is compromised or replaced by preferential ethnic and sex criteria.[7]

Seabury explains that the idea of merit as a conception of justice means "to each according to his abilities . . . [and] works."[8] Of course, Seabury does not claim that throughout society people are rewarded according to their ability and works. Why then does he believe that this kind of justice looms so large in academies? Do professors have so much more integrity than ordinary mortals? Such discrepancy between the morality of academia and the rest of the world seems implausible, for a start.

Note that the idea of a merit hiring *system* does not mean merely that excellence is given some recognition. Superior quality plays a role in almost any market or hiring system. The force of talent is undeniable. It is unlikely that the three top sopranos would be unrecognized. Similarly, virtually anyone who has contributed significantly to knowledge will be offered a place in a major university. But it is a necessary condition of any hiring system based on merit that qualified candidates not be excluded, either because of (1) hiring procedures that tend to reject them, or (2) prejudiced attitudes, e.g., against women. Academic hiring fails on both counts.

HIRING

If any group can be expected to hire its faculty according to "standards of excellence," it should be the philosophers. Do not philosophers, far from petty concerns, seek Truth, Beauty, and the Good? But the fact is that hiring practices in philosophy are similar to those described in *US vs Local 46, Lathe Workers* where the court found a "deep-rooted and pervasive practice" in the lathe workers union of giving out jobs through their own network "on the basis . . . generally [of] 'pull.'"

As with the lathe workers, so with the logicians. The philosophy hiring network is revealed in a document issued by the officers of the American Philosophical Association:

> [we] have for some time been ashamed of the way in which we force young philosophers to . . . enter . . . the profession. . . . Candidates for junior positions, *no matter how able*, can . . . probably expect . . . serious consideration from only a few departments, . . . in a great many cases, departments having *some special tie* with [their] own. These conditions, together with the spectacle of the annual smoker . . . [where job interviews occur] can

[6] HU, p. 38.
[7] HU, p. 44.
[8] IM, p. 41.

> hardly . . . instill . . . pride in our profession. [APA Bulletin #4, February, 1971 emphasis added]

This "special tie" is known in every profession as the "old boy" or the "buddy" system. Seabury's claim that American administrators seek "the best the world of scholarship could offer" is misleading.[9] Typically, a department chairman asks his former graduate professor to recommend a candidate. For example, colleges in New York City employ a large number of Columbia PhDs. Did New York college administrators just happen to find the best available candidates from "the world of scholarship" studying right in their own neighborhood? The fact is that a local phone call often fills the job. This "old boy" system tends to exclude talented people outside the closed circuit.

Seabury does offer one fact about academic hiring practices. The hiring "skill pool" used by "top universities" is "the top 5 percent of graduate students in the top ten universities."[10] But hiring among top institutions itself exemplifies the "old boy" system. A bright graduate student who didn't attend a top university is usually barred from a place on their faculties. In a merit system, such institutions would reasonably recruit, in good measure, from top universities; but no candidate would be denied a chance merely because of the status of his or her graduate school. The fact is, however, that a student's choice of graduate school (often made naively or ignorantly or because of family obligations) "has a determining effect on where he ends up."

> Just as a person's eventual position in society depends on the class he was born into as well as on his own talent, so his eventual position in higher education depends on the standing of . . . his PhD institution . . . as well as on his capabilities. . . . [R. Berelson, *Graduate Education in the US*, McGraw-Hill, 1960, pp. 109-113]

The "halo effect" conferred by a PhD degree from a high-status school is an advantage regardless of merit. But that halo does not brighten a mediocre PhD's own classroom, where generations of students may languish under incompetent instruction. In today's tight academic market, mediocrities with high-status PhDs can still expect decent jobs, while bright lively candidates from minor universities may worry whether they will ever get to teach a class. As the APA document reports, job candidates have a "desperate sense that one could find out where the jobs are if one could only be introduced to the right people."[11]

A resolution by young philosophers describes hiring procedures:

> Something must be done about the degrading and humilitating process of [convention] interviewing . . . the inhuman rush for jobs and candidates. . . . How are we to take philosophy as a great enterprise of the human spirit, when it becomes a scene of speedy uncaring encounters with recruiters and a race from interview to interview. [APA Bulletin #4]

Philosophers refer to the APA Convention, where "degrading and humilitating" job interviews occur, as "the slave market." Perhaps some day Seabury will explain how hiring procedures appropriate to a slave market sustain a merit system.

A system where job applicants are "desperate" to meet the right people also corrupts professional excellence, although more subtly. What happens when young people, who regard their profession as "a great enterprise of the human spirit," discover that to practice their profession they should know the "right" people? Ways of knowing the right people are the same throughout society; and profesors are no less susceptible to flattery than others. Young persons who become adept in getting to know the right people are likely to become less fit to practice any "great enterprise of the human spirit." (Such adeptness can also help a young academic to become one of those "right people" himself—a fact which helps to explain how mediocrity finds a home for itself on major university faculties; or—to skip a step in this story—how so much pale, male, dead wood got settled at the top.)

Recently, I ran into a philosophy instructor who as a student had seemed the model of intellectual purity. This model now held forth on the utility of something he called "deference." It is certainly true that deference is professionally most useful and can be practiced in a variety of ways. For example, one could, in one's own articles, defer to Profesor Joe Doaks, by such references as these:

---

[9] HU, pp. 40–41.

[10] HU, p. 42.

[11] It should be said that in the last few years, the American Philosophical Association has attempted to reform these hiring practices, e.g., by publication of a directory, *Jobs in Philosophy*, where job openings are listed and described.

> Philosophers like Bertrand Russell and Joe Doaks. . . . This article is a footnote to Professor Doak's classic paper. . . . As Doaks has taught us. . . .

It is not surprising that many young academics come to resemble their Madison Avenue counterparts—junior executives on the make.

While Seabury mentions the hiring tie among top institutions, he says practically nothing about general hiring practices in the academic world. But the moral principle he praises—to each according to his ability and works—is a tenet of justice. Surely the person applying for an instructorship at Podunk College, as well as at Harvard, has a right to just treatment. Seabury might broaden his moral perspective by asking whether academic people are usually accorded fair treatment. He would find, I suggest, that applicants for instructorships share the fate of job seekers everywhere. Being the best qualified candidate is *one* way to get the job.

SEX DISCRIMINATION

The claim that universities use the merit system is weakened even more by the extensive evidence of university sex bias in employment. In this respect, universities looked no better in 1970, when HEW began a number of campus reviews, than did society in general.

Let us briefly recall how widespread sex bias had become by 1970. Excluded, for the most part, from positions of power in government, industry, labor, and the professions, women were concentrated primarily in low paying, unskilled and semiskilled jobs. (Even in an overwhelmingly female occupation, lower education, there were fewer than five women among 13,000 U.S. district superintendents.)[12] For every $100 earned by the average full-time male worker in 1968, his female counterpart earned $58.20.[13] A typical eigth-grade male graduate earned as much as a woman BA working full time.[14]

Such gaps have usually been explained by saying that employers are "naturally" reluctant to hire and promote women who "naturally" take time out or resign because of family obligations. This family rationalization is used so often it deserves a name, *Famrat.* But by 1970, studies had undermined this argument considerably. When the records of men and women were compared for the same job categories, it turned out that women resign or are absent less often (including time off for child care and pregnancy) than men. The status of a job roughly predicts turnover. Dishwashers leave their jobs more ofen than bank presidents.[15]

The scarcity of women's faces in high places has been coupled with a general belief in their inferiority. Thus, in experiments, the same article (appraised by both women and men) was rated significantly lower when attributed to a female writer.[16] The belief in female inferiority has shown up in radical as well as respectable society. At a 1966 SDS convention women who proposed a women's liberation plank were "pelted with tomatoes and thrown out of the convention."[17] As the power, position, and pay of most jobs increase, the smaller the ratio of women. This same pyramid appears within academies, where an institutional standing, rank, and salary rise, the ratio of women declines. Perhaps this pyramid has been based on women's academic inferiority? Let us see.

HIGHER HURDLES

A comparison of male and female students shows that "apparently only the very best of the good women students" entered graduate school.[18] Harmon, in his study of over 20,000 PhDs, reports:

> Women . . . PhDs are superior to their male countreparts on all measures derived from high school records, in all . . . specialization[s]. [Page 60] An earlier study . . . found . . . women PhDs . . . brighter by any index . . . used, than men in the same . . . specialization. [*High School Ability Patterns: A Backward Look from the Doctorate*, Scientific Manpower Report No. 6, 1965,

[18] *Academic Women*, Jesse Bernard (Pennsylvania State University Press, 1964), p. 80.

L. R. Harmon, pp. 27–28.]
There is a simple enough explanation for this marked academic superiority of women PhDs: since women students faced greater obstacles in obtaining PhDs, in general, only the very able made it. But the barriers these women encountered as students foreshadowed their treatment as instructors.

As a consequence of sex quotas, women needed higher grades for admission to many colleges. (The University of North Carolina at Chapel Hill restricted admission of women a few years ago "to those . . . especially well qualified." The entering class was 80 percent male.)[19] In academia, open expression of sex prejudice was considered respectable. Nathan Pusey, president of Harvard, upon learning that, because of the draft, fewer men would apply to Harvard Graduate School, complained, "We shall be left with the lame, the halt, and the women."[20] Sarah Lawrence president Charles de Carlo explained that "feminine instincts . . . demand that men be better than they are."[21]

It is unimaginable that spokesmen for major liberal academic institutions would have openly expressed such attitudes toward Jews or blacks. (It is also unimaginable that such institutions would have tolerated bulletins in their placement offices listing jobs for "whites only" or "gentiles only." Yet the *College Placement Annual* used by hundreds of major institutions often advertised jobs for "male only.")[22]

What college presidents said openly about women is a mild indication of what went on behind the scenes, when women's grades and recommendations were made up or when women students criticized a male professor's opinions in class. The following are samples from a collection of remarks by academic men about women:

> Any woman who got this far has got to be a kook. . . . The girls here get good grades because they study hard, not because they are more intelligent than men. . . . We expect women who come here to be competent, good students, but we don't expect them to be brilliant or original. . . . Women are intrinsically inferior. . . . Our general admissions policy has been, if the body is warm and male, take it; if it is female, make sure it is at least an A minus from Bryn Mawr.[23]

Women who survived in academic life had to be able, hard-working, and determined. A medical school dean exclaimed: "My God, . . . what [am I] going to do with all these female overachievers who keep applying?"[24]

EMPLOYMENT

Were "female overachievers" applying for jobs as instructors rewarded in accordance with "their ability and . . . works"? One study suggests they were punished because of their ability and work. Women PhDs ranking highest by academic standards turned up as the same women who reported academic sex discrimination (H. Astin, *The Woman Doctorate in America*, p. 107).

Let us look now at the general position of women PhDs. Over 90 percent are employed,[25] they work primarily in lower ranking institutions which require heavier teaching loads for lower salaries.[26] It is often the case that a junior scholar, beginning as an instructor or assistant professor, ascends the academic ladder to a full professorship. Yet never in the history of six social science departments at the University of Chicago (founded in 1892) has a single woman junior appointee become a full professor in her department. (The first woman to teach a political science course—Elizabeth Wallace in 1892—was also the last woman appointed in that department.)[27]

Seabury describes the scarcity of women on major university faculties as "statistical underrepresent[ation]" caused by the merit system.

> This [merit] system . . . left a myriad of American categories statistically underrepresented in the highest precincts of American higher education. . . . On faculties . . . women are underrepresented. . . . Jews . . . 3 percent of the population . . . are a vastly greater proportion . . . on the faculties of America's greatest universities. [HU, pp. 40–41]

By women's "statistical" underrepresentation on major university faculties, Seabury means the disparity between the female percentage of such faculties and the 51 percent female proportion of the national population. To fault universities alone for that is, of course, to burden them with sins not of their making. But there is another revealing disparity which Seabury never mentions: the great gap between *women trained as PhDs* and *women hired as faculty* by major universities. Here are some pre-HEW 1970 comparisons between the ratio of women as PDs and as major university faculty:

Approximately one in eight PhDs is a woman, but at major universities one in fifty full professors is a woman.[28] Women are granted one in six sociology PhDs, but only one in 100 sociology professorships in top graduate schools.[29]

Women were awarded 10 percent of Harvard's Arts and Sciences PhDs in 1960, and 19 percent in 1969. But Harvard's 1969–1970 Senior Arts and Sciences Faculty (except for one woman's chair) was composed as follows: Men, 483; Women, 0.[30]

In 1968, Columbia awarded women 67 percent of its PhDs in French, 44 percent in anthropology, 36 percent in psychology, and 17 percent in philosophy. But no woman was included on these PhD-granting faculties.[31]

In 1968, major institutions awarded the following percentages of PhDs to women in five disciplines. Psychology: 26 percent, zoology: 20 percent, biochemistry: 21 percent, history: 13 percent, philosophy: 11 percent.[32] But Berkeley's 163 faculty positions in these five disciplines (instructor and up) were distributed in 1968–1969 as follows: Men, 163; Women, 0.[33]

Why does this enormous gap exist between women trained and women hired by major universities? *Famrat* surely competes with sex discrimination as a candidate for such an explanation: a woman PhD's family obligations are so consuming that she becomes less qualified than her male counterpart. When one notes that the average woman PhD does twenty-eight hours per week of housework, *Famrat* seems even more plausible as an explanation.[34]

But if *Famrat* were true, then there should be sharp differences between men and women PhDs in the amount of work published. In fact the difference is a negligible one.[35] Not surprising if we remember that it usually takes very hard-working, able, and determined women students to overcome the barriers of sex prejudice. Moreover, *Famrat* cannot tell us why the half of women PhDs who are single receive "markedly lower" salaries than male PhDs.[36] Or why, as a study of academic social scientists holding a PhD over twenty years showed, 90 percent of the men, but only 53 percent of the single women, had attained a full professorship.[37] Finally, while *Famrat* might explain why some academic women become less qualified than their male competitors, it cannot explain why academic women equally qualified with men are paid less and promoted more slowly.

An analysis of the 1969 survey by the Carnegie Commission on Higher Education and the American Council of Education sums up the story:[38] Allowing for practically all the relevant factors that might affect the outcome (demographic, educational, work experience, institutional), the results "clearly demonstrate the biases . . . against women in awarding rank." To pay women as much as men of "similar rank, background, achievements and work setting" would require an average compensatory raise of $1,000. This figure, according to the analysts, is "*extremely conservative*" since it does not reflect the salary loss from discrimination in opportunities for advancement, hiring, and rank. The amount of "*actual*" salary discrimination entitles women to a "substantially" higher compensatory average raise (emphasis in original).

[38] "Sex Discrimination in Academia," Helen S. Astin and Alan E. Bayer, *Educational Record*, Spring, 1972.

If sex bias deprives academic women of the salary and rank they deserve, it is surely reasonable to infer that such bias also deprives them of other professional rewards, e.g., of positions they merit in the "highest precincts" of American education. When Seabury's articles extolling the academic merit system appeared, mounting evidence of university sex discrimination had already been published, although nowhere does this social scientist refer to it. Sidney Hook assesses the degree of sex prejudice in universities as merely "peripheral." [30] Yet Hook—defender for decades of the scientific method—fails to offer a shred of evidence for this view. These self-proclaimed defenders of scholarship standards might start by doing some homework.

ENFORCEMENT

By 1971 the HEW civil rights investigators were conducting a number of reviews of university discrimination. Predictably, administrators in institutions where women had been kept in their place complained that the HEW investigators were violating their rights. The published reports about two such cases—Columbia University and Brooklyn College—suggest, however, that it is the authors of these reports who are violating rights—the right of their readers to be told the whole truth.

Columbia's President McGill had this to say about HEW's methods:

> If . . . we are to move quickly to truly equal opportunity for women under federal pressure . . . it would be advisable to protect the integrity of the experiment by suitable exercise of due process. To take one example, in late June of this year [1971] Columbia received a letter addressed to "President Andrew Carider" stating that we were out of compliance with the terms of the federal executive order enforcing equal rights in federal contract activities. We were instructed to get into compliance within thirty days or face a cut-off of federal grant funds. There was no prior warning. There was no notice of hearing or right to appeal; no clear indication in fact of the manner in which we had failed in compliance. All this required discovery.
>
> Such methods seem to me a bit heavy-handed. One would think that an agency threatening to cut off all our federal funds would at least make an effort to get the president's name straight. (I succeeded Andrew Cordier in 1970.) Even with the best intentions we cannot accomplish overnight what our social order has failed to achieve throughout all its history [*Life* guest editorial, October 8, 1971.]

No prior warning? No due process? Demand for overnight accomplishment?

The truth is that HEW had been negotiating with Columbia for two and a half years before McGill received this warning in June, 1971. McGill himself was involved in these negotiations. Six months before the warning was given, on February 2, 1971, he was informed in writing by an HEW official of their requests concerning an impending Columbia review. During those two and a half years, Columbia received a considerable amount of "due process" and prior warning." What was at issue?

Columbia, like other government contractors, is required to undertake an "affirmative action plan". It must (1) compile basic employment data relevant to discrimination; (2) identify discrimination in hiring, salary, and promotion; (3) set up a remedial program with goals and time tables. In two and a half years, Columbia failed to take serious steps toward getting through phase (1). Without such data on comparative salaries, job duties, etc., an employer can't identify the discrimination itself (phase 2), and so can't devise remedial programs (phase 3).

Between February, 1969, and June, 1971, Columbia promised HEW the employment data, then stalled, made fresh promises, and stalled some more. At the end of 1969 Columbia submitted a plan lacking basic data and it was still lacking in June, 1971, HEW again and again requested this information from Columbia officials (e.g., Presidents Cordier and McGill, Vice President Goodell, Dean Merritt) by letters, telephone, interviews, special delivery mail. What McGill conveyed to *Life's* two million readers—that HEW's June, 1971, warning was HEW's first communication with Columbia—was false.

---

[30] *Freedom at Issue*, July, 1972 (hereafter, FAI), a bi-monthly paper published by Freedom House.

Sidney Hook, applauding McGill's *Life* editorial as a resopnse to HEW's "poisoned" reasoning, suggested that "even alleged criminals" are assured more procedural protection than HEW gave Columbia.[40] What alleged criminal is given two and a half years to examine his own record and make plans for doing better?

Columbia's second plan was submitted, again without basic data, on July 30, 1971. In this plan, Columbia anticipated that by December, 1973, *five years after negotiations began*, it could complete an analysis of faculty salaries. HEW's civil rights director, J. Stanley Pottinger, told Columbia why the plan was rejected:

> . . . it fails to identify and analyze . . . basic employment patterns necessary for the identification of problems, and the development of . . . remedies . . . it fails to commit the University to gather and analyze this information so that it can itself . . . identify and eliminate . . . problems. . . . Instead despite a considerable passage of time . . . the University proposes to make analyses . . . only after additional unexplained exorbitant delays . . . I should emphasize that . . . hiring criteria . . . [are] appropriately left to University officials. Our sole interest is to ensure that . . . employment criteria are not invidiously discriminatory on their face, and are implemented in a nondiscriminatory manner.

Of Pottinger's recommendation to terminate Columbia's contracts Seabury wrote:

> In November, 1971, HEW's Office for Civil Rights anounced its intent to institute proceedings for Columbia's permanent debarment—*even though no charges or findings of discrimination had been made.* Columbia simply had not come up with an acceptable affirmative-action program to redress inequities which had not even been found to exist. [HU, *Commentary*, February, 1972, p. 39, emphasis in original]

It is astonishing that although at another point in his article Seabury refers to McGill's claim that Columbia found it difficult to collect data for HEW, *he never mentions HEW's charges that Columbia failed to supply information for two and a half years.* He thus conveys the impression of tyrannical, irrational bureaucrats threatening to "wholly wreck" a university. The truth is that nonenforcement in cases like Columbia's would "wholly wreck" chances of women and minorities for justice on their jobs.

It is highly unlikely that Seabury was ignorant of HEW's charges against Columbia. Those charges were published in the same *New York Times* story (November 5, 1971) that reported HEW's announcement of its enforcement action at Columbia—the same announcement Seabury referred to in *Commentary*. HEW's "thirty month delay" charge was repeated in the next day's *Times*, in the same column containing a statement by McGill that Seabury cities.[41] Hence it is hard not to conclude that Seabury is guilty, not of mere negligence (i.e., not troubling to ascertain the whole truth), but of a more serious moral offense, attempting to create a false belief by deliberately ommitting relevant facts.

Another exposé of HEW, this time from Sidney Hook, about Brooklyn College:

> On April 30, 1971, . . . [the] President of Brooklyn College . . . received a letter from the HEW, *making not a "complaint" alleging sex discrimination [against a woman associate professor]* . . . but declaring that "findings" had been reached that the college was guilty of sex discrimination and ordering that [she] . . . be forthwith promoted . . . with . . . several years pay differential. *All this set forth as a "finding" without even a hearing!* Failure to act on the finding, it was threatened, would lead to cancellation of all federal grants. [*Freedom at Issue*, March, 1972, emphasis added]

But HEW investigators had met with the college president and dean of administration on March 18, 1971. Moreover, not one word about canceling federal grants appears in this HEW letter. Nor was the president "ordered," as Hook claims, to promote the woman in question and pay her back salary. The HEW letter states:

---

[40] FAI, November, 1971.

[41] HU, p. 42.

> We are *recommending* that . . . she be immediately promoted . . . we are *recommending* that . . . [her] salary be immediately raised . . . and back salary [granted]. . . . [Emphasis added]

Three years later, Brooklyn College, its federal grants untouched, has yet to accept these recommendations.

More from Hook: "HEW did not ask why the promotion in question had been turned down for twenty years by this woman's colleagues. . . ." But in fact, her promotion was denied, not by her department colleagues, but by a committee appointed by the administration. Indeed, the very HEW letter Hook cites reports that her department colleagues recommended her promotion ten times between 1957 and 1967, and "in five separate years . . . [she] was *the department's first ranked choice for promotion*" (emphasis added).

Turned down by her colleagues indeed!

Had Sidney Hook honestly investigated these HEW findings he might have found that men whose academic qualifications were inferior were given the promotion she was denied. He might also have found evidence that Brooklyn College (like other CUNY colleges) has consistently practiced discrimination against women instructors.[42] Instead, he published a plainly distorted account of this woman's case, an account she must have read with considerable pain. (I have cited here only the most flagrant of Hook's distortions.) On a most generous interpretation, Hook's report is hearsay, originating from a hostile source. However, this moral philosopher is certainly guilty of culpable negligence with respect to the truth.

HEW investigators, enforcing the Executive Order, are required in their campus reviews to investigate patterns of job discrimination and to ensure that action to remedy it is taken (e.g., setting numerical hiring goals and time tables). Critics argue that HEW's rules for universities put unfair emphasis on numerical criteria. First, absurd arithmetical standards are allegedly used to detect hiring discrimination (i.e., "underutilization"). Second, in their enforcement of the numerical hiring goal requirements, HEW investigators are said to be imposing a quota system, which yields reverse discrimination against white men.

HEW investigators have frequently interpreted discrimination against women instructors as a disparity between the ratio of women who are on the faculty and those who are PhDs.[43]

Daniel Bell questions HEW's "logic."

> . . . the government's test became . . . if women earned 30 percent of the PhDs, are 30 percent of the faculty women . . . what is the logic of extending the "representation" principle only to women . . . [and minorities named] in the HEW guideline? . . . why not religion or political beliefs as the criterion of balanced representation . . . [should] conservatives, . . . highly underrepresented in [California] state [faculties], . . . be given preference in hiring. . . ? [*The Public Interest*, February 1972, pp. 37–38]

Thus, according to Bell, the logic of HEW rules is absurd because any group could demand faculty representation. But, in fact, the absurd demands Bell fears are excluded by HEW practice. This is why: Suppose a group constitutes 30 percent of the candidates for employment, but only 10 percent of those actually hired. We presume that "underutilization" has taken place when we know there has been a clear pattern of discrimination against the group in question. Consider the following hypothetical case: Suppose that women and Republicans each constitute 5 percent of the sociology faculty in a typical major university, the U of X. Such statistics taken alone may be grounds for a suspicion of discrimination. But interpret these statistics in the light of what we know about the hiring of women and the possibility that the U of X discriminates against women becomes likely, while the same possibility concerning Republicans declines.

---

[42] "Women as a group are not treated equitably throughout the CUNY system (p. 6). However the CUNY system is analyzed . . . the lower faculty rank standing of women prevails (p. 50). Women were *not* receiving equal pay for equal work (p. 59). . . . Brooklyn . . . diverge(s) in no significant way from the . . . CUNY . . . pattern (p. 54)." The argument that the lower status of women faculty members is based on their lack of professional achievments is inapplicable at CUNY (p. 66). *The Status of Women at the City University of New York, A Report to the Chancellor*, prepared by the Chancellor's Advisory Committee on the Status of Women, December, 1972 (emphasis in original).

[43] " 'Underutilization' [of women] is defined as having fewer women in a particular job classification than would reasonably be expected by their availability . . . the contractor will consider the availability of women having requisite skills in an area from which the contractor can reasonably recruit" (Revised Order No. 4).

Remember that the gap between women trained and women hired holds generally for major universities, in most departments, while in society at large, as well as universities, women are concentrated at the bottom in salary, position, power, etc. Sixteen percent of sociology PhDs are women, while 5 percent of the U of X sociologists are women. In view of this pervasive background of sex prejudice, it is quite likely that the 95 percent male U of X sociology department "underutilizes" women.

Nothing like this general pattern could be shown for Republicans, or for most other political or religious groups. So the argument that any group whatever could demand faculty representation is without merit. But suppose that the U of X sociology department does *quite likely* discriminate against women. Is this sufficient for conviction? A jury should convict only if the defendant is not merely likely guilty, but guilty beyond a shadow of a doubt.

True. But remember, in a courtroom the consequence of erroneous conviction is unjust imprisonment, while under HEW's rules the university is "sentenced" to aim at recruiting and promoting qualified women. Some of course would regard having women in their department as a painful penalty, and giving women equal rank a still greater misery. But would such suffering be undeserved?

QUOTAS

Employers who fail to meet their hiring goals for women instructors are not penalized by HEW if they can show they are trying in "good faith" to find qualified women (e.g., by soliciting applications from women's professional organizations, by advertising vacancies, and by abandoning the "old boy" system of faculty recruitment). However, it is widely believed that HEW, by requiring such goals, is really imposing a quota system. According to such belief, the university is compelled to hire a specified number of women or lose their federal contracts. Under threat of such sanction, the university has no alternative but to reject more qualified male candidates, i.e., practice reverse discrimination.

The "quota" charge was, to my knowledge, first made in the March 1972, *Freedom at Issue* article by Sidney Hook. His article appeared with the following bold headline: "Force Faculty 'Quotas'—HEW." The unwary reader would think that an HEW official had in fact instructed HEW representatives to "force faculty 'quotas.'" Yet nowhere in Hook's article is any such HEW statement displayed, and Hook cites no source for this headline. The "quota" charge continues to thrive, in spite of HEW's denial. "Goals," writes Seabury, are the "twin sister" of "formal quotas." [44] Daniel Bell claims:

> The government assumes that "educated labor" is "homogeneous. . . ." One can "logically" insist on quotas where the skill is homogeneous . . . set[ting] *"target"* figures for women . . . has . . . [in] practice . . . meant quotas, or priorities in hiring, for . . . [women]. [*Public Interests*, Fall, pp. 36–37, 1972]

The fact is that rules for applying the Executive Order specifically state that "goals must not be rigid and inflexible quotas which must be met." [45] Hence, if the quotas charge is true, HEW officials are illegally imposing quotas, by threatening sanctions when a university, in spite of "good faith efforts," fails to meet its hiring goals. Some HEW investigators, carried away by their power, might, on some occasions, have so exceeded their legal authority. But if there are such cases, when apparently neither Hook, Seabury, nor Bell has been able to find them. For all their "quota" mongering they have failed to show a single case where HEW has, in fact, imposed a quota on a university, i.e., refused to accept "good faith efforts" in lieu of a goal unfulfilled.

On the other hand, HEW has accepted good faith efforts from universities (e.g., MIT, University of Vermont, Princeton, Rutgers, and Tiffts) who fell short of their hiring goals. Moreover, none other than President McGill of Columbia University has stated that:

> In the [1972] agreements which we reached with the government . . . we were not required to engage in preferential hiring of minorities and women. We are also not required to inject any considerations beyond merit and excellence into our appointment process. . . . Thus the fact that we have stated our long-range objectives numerically . . . (under existing federal

---

[44] IM, p. 45.

[45] Revised Order No. 4.

> regulations) . . . does not seem to me to have forced reverse discrimination upon us. . . .
>
> I have never encountered such views [favoring preferential hiring] in any of my dealings with public officials. [Address read B'nai B'rith Anti-Defamation League, Palm Beach, Florida, January 20, 1973] [46]

The claim that HEW is forcing faculty quotas turns out to be unsupported. Moreover, if the Executive Order is weakened by eliminating hiring goals, then as far as women are concerned the future will resemble the past. Hundreds of academic departments have yet to make even a token repudiation of that past, i.e., to promote or give tenure to a single woman, or to hire one women as an assistant, associate, or full professor. Remember that the men who expressed contempt for women graduate students are for the most part still around. Is it plausible that they want *women* in their departments? The typical male academic has been inclined to believe for most of his life that, with rare exception, women's minds are not to be taken seriously. Should he trust himself to judge a woman's intellect impartially? [47]

Finally, it has been objected that there is a tendency in the hiring process for goals to become quotas. After all, the easiest way to meet a goal is by preferential hiring, e.g., to reserve a current vacancy for a women, whenever possible.

Yes, it is the easiest way, and it is posible that some of the administrators who *say* (illegally) that they are holding a post for a women actually end up hiring one. Any man who as a consequence is unjustly denied the job he merits is perfectly entitled to do what a great many women are still doing: to file a sex discrimination grievance with agovernment agency. Of course, if these administrators had seriously been searching for the best candidates, they wouldn't have taken the easy way of preferential hiring. But had they followed a merit system, academic women wouldn't have found it necessary to call in the law.

PREPARED STATEMENT OF HELENE N. GUTTMAN, PROFESSOR OF BIOLOGICAL SCIENCES, UNIVERSITY OF ILLINOIS AT CHICAGO CIRCLE

This is the testimony of Helene N. Guttman, Ph.D., Professor of Biological Sciences, University of Illinois at Chicago Circle (UICC). At that institution, she is also an elected member of the University Senate, of the Faculty Advisory Committee and of the Executive Committee of the UICC Women's Caucus. Nationally she is chairperson of the Taskforce on Liaison with Government of the Federation of Organizations for Professional Women and of the Status of Women Committee of the American Institute of Chemists. Professionally she is Fellow of the American Academy for Microbiology, Fellow of the American Institute of Chemists, Fellow of the American Association for the Advancement of

---

[46] McGill was describing not merely the situation at Columbia. In fact, HEW generally leaves hiring standards to the university. (See Pottinger's letter cited above.) However, a biased administrator may prevent hiring or promotion of appropriately qualified women by deliberately raising standards for women candidates. This discriminatory double standard was, in fact, widely used against academic women. "Being 'qualified' simply has a different meaning for women than for men" (Sandler, *WRCR*, p. 570). Revised Order No. 4 makes the following "suggestion."

> The contractor should insure that minority and female employees are given equal opportunity for promotion. Suggestions for achieving this result include . . . neither minority or female employees should be required to possess higher qualifications than those of the lowest qualified incumbent (No. 60 :2.24 : fn 5).

Peter Holmes, current HEW civil rights director, reported HEW's interpretation of this section:

> . . . [it] constitutes . . . suggestions [whose] . . . object is to discourage contractors from applying an *abnormally rigorous standard* in order to exclude or limit persons from consideration on a racial or sexual basis. This does not however require the employment or promotion of a person solely because that individual meets the qualifications of the least qualified incumbent. [Read to September, 1973, Political Science Association meetings. Emphasis added]

[47] Currently the situation of black academic job candidates is relevantly different from the position of womn candidates, since the supply of trained academic blacks is much smaller. Less than 1 percent of PhD holders are black. (See data on number of black PhDs, actual and projected, in a 1968 study appearing in *Available Data on Minorities and Women*, US Department of HEW.) Universities are currently competing for token blacks and prdominantly black colleges are experiencing a "brain drain." But if the supply of black candidates were to increase substantially and significant numbers of blacks rose in the academic hierarchy, it is not implausible that academic race bias would reassert itself. Imagine a situation where a black administrator denies promotion to a white instructor on the grounds that the instructor's publications are intellectually inferior. Could any white person, no matter how emancipated, who grew up in this society, be certain that he or she would feel no differently because the adverse judge of his or her intellect was black?

Science, Member of the Executive Committee of the Society for Protozoology, and Member of the Editorial Board of the Journal of Protozoology.

During 1973 and the first half of 1974, I have visited more than two dozen academic institutions throughout the country to give professional lectures in my research specialties and to assess the status and treatment of women in those and neighboring institutions. In addition our UICC Women's Caucus exchanges information on the status and treatment of women with similar groups throughout the country.

Inspection of the number of doctorates awarded to women and percent doctorates awarded to women in many of the diverse fields comprising natural and social sciences was already high in the years 1960–69 when discrimination against women graduate students not only illegal—only unethical. Thus those women can be presumed to be more highly qualified than men who were graduated during that period because women were more rigorously screened. Moreover, significant numbers of these women were awarded degrees from departments and universities which were considered the most selective and/or the most distinguished. However, the number of women who hold senior or administrative posts in prestigious as well as average institutions is low: in several cases the number of women faculty members has declined in the last year.

Examples of practices in prestigious institutions are particularly noteworthy because, by their esteem in the professional and academic community, their graduates are actively sought. Furthermore, because of their prestige and other amenities they are able to capture both junior and senior personnel currently employed by other institutions. Yet investigation shows that these institutions have, in the main, added few if any women to the total in senior staff or to junior positions which are in the line of assent to senior positions. Clearly these institutions take the *de facto* position that all of their doctoral graduates—or they would not have granted them their degree, but they make personal reservations about admitting women—but not men—to the jobs that are the usual reward for this quality.

Current federal regulations (Executive Order 11246 as amended; Revised Order; Title VII of the Civil Rights Act of 1964 as amended by the Equal Employment Opportunity Act of 1972; the Equal Pay Act of 1963 as amended by the Education Amendments of 1972) and many state regulations prohibit disparate treatment of men and women of equal quality. Yet statistics show that these practices continue because higher administrators do not insist that unit heads participate in these aspects of ethical practices and the governmental agencies whose mandate it is to protect the civil rights of individuals instead protect institutional continuation of discrimination. Meanwhile many individual careers suffer irreparable damage and all of society loses services of useful and even gifted citizens. Annual statistics published by the American Chemical Society in *Chemical and Engineering News* and a similar survey published by the American Society for Microbiology in its *Newsletter* (and reprinted in *Science*) show persistence in both salary and rank discrimination and increase in disparate treatment at the higher ranks.

An indication of the type of problem commonly found in large university chemistry departments can be judged from the example of the one at the University of Minnesota. This department currently consists of 44 male members and has had *no women* on its permanent faculty since its founding in 1917! Women have had post-doctoral, research associate, and *transient* faculty positions. In one recent, notable instance, a woman who had been rated as their top postdoctoral and then as an excellent teacher in her transient assistant professorial position began to be rated inadequate in all categories shortly after she requested consideration for a position in the permanent faculty line of assent. At that time her department was actively recruiting for such a position in her field and hired a man whose qualifications did not surpass the woman they refused to consider.

The scandalous acceptance of the admittedly inadequate Harvard Affirmative Action Plan by the Office for Civil Rights, DHEW, is an example of combined institutional laxity and failure of the federal government to enforce their own regulations. The 13 major points of failure of the Harvard Plan have been published widely in the New England states. The stance of OCR–DHEW has been to reveal these inadequacies and allow the university time to put their house in order. Those are fine sentiments but the actions of Harvard do not bespeak serious efforts. As I mentioned before, the prestige, salary and other amenities offered to men to join the Harvard faculty frequently lure them from other good jobs so it is hard to believe that similar hard sell efforts directed towards women would not also be successful. At Harvard Medical School there have been notable increases in admissions of women medical students yet several departments openly practice discrimination in hiring and/or reward to the few women faculty.

Specific details on these matters will be supplied *in camera* to protect the women involved from harassment and retaliation. An example of an open sexist advertisement (men only apply) from another unit of Harvard has been pointed out in the testimony of Dr. Julia Lear. Thus we see that Harvard has given removal of sexist practices a very low priority and our government agencies mandated to protect the civil rights of individuals to ensure FAIR treatment also have not made surveillance of Harvard a matter worthy of high priority action.

The situation at Princeton University, a relatively small but highly-prestigious institution, deserves some attention because one of its faculty members Dr. Richard A. Lester recently published a report under the auspices of the Carnegie Commission on Higher Education which appears to be in conflict with my own experience as well as the experience of other colleagues. Since I am particularly concerned with entrance of our distinguished women scientists into the higher ranking university positions, I am giving as background some examples of the percentage women doctorates awarded between 1960–69 (data from DHEW). If one adds doctorates awarded before that time and in addition remembers that criteria for admission to graduate school and award of doctorates to women during that period were higher for women than for their male peers, one then understands that a disproportionately large number of women (but not men) were better than average and, *if fair play* ruled then a number in excess of the percent doctorates to women would be represented in the number of women in university leadership positions. Unfortunately, the number of women in these important and leadership positions is small and has shown little increase. The total number of women on faculties of some large universities (for example my own university) has actually decreased in the last year.

Proportion of doctorates earned by women 1960–69

Field:	*Percent*
Anthropology	22
General biology	20
Anatomy and histology	18
Bacteriology	17
Biochemistry	17
Cytology	30
Embryology	24
Molecular biology (1968–69 only)	19
Nutrition	29
Physiology	15
Public health	15
Clinical dental services	17
General psychology	20
Clinical psychology	25
Social psychology	22
Sociology	17

The Office of the Chancellor, University of Wisconsin, has prepared an even more impressive set of statistics. That is a list of total number of women doctorates in various fields from *top degree granting universities* for the years 1967–69. Those percentages show that there are even more young women doctorates available and they have degrees from the more prestigious institutions. Only a few examples are given here to make the point:

Field	Women doctorates in percent	
	(DHEW) 1960–69	(University of Wisconsin top institutions) 1967–69
Anatomy and histology	18	23
Anthropology	22	25
Bacteriology	17	22
Biochemistry	17	22
Sociology	17	18

Dr. Lester claims that (a) there has been a reduction in quality of university faculty; and (b) that this has been due to affirmative action pressure which has forced universities to hire a disproportionate number of unqualified women. The facts tell quite a different story. 1. The proportion of women faculty members—particularly in high positions is still disproportionately low and, as I indicated even declining in some institutions so that any decrease in quality must be due to the overwhelming influence of the most numerous faculty component—the white males. 2. Affirmative action never has demanded or even suggested that incompetents be hired and we women are on the one hand proud of the large number of above average and distinguished women available in diverse professional areas but we are saddened when we see less competent white males pressed ahead via the old boy muddy system and in direct opposition to the idea that the best quality should receive the highest award.

Now let us look at the roster of women faculty in the natural and social sciences and engineering for Dr. Lester's institution—Princeton, for the academic year 1973–74. It is important for committee members to understand that only the ranks assistant professor, associate professor and professor are considered in the direct line of faculty assent. Other positions are to be considered transient.

Princeton Department:	*Number and rank of women*
Anthropology	1 Associate professor, 1 Visiting professor.
Biology	1 Lecturer.
Chemistry	1 Assistant professor, 1 Instructor.
Chemical engineering	2 Lecturers.
Geology and geography	1 Assistant professor.
Mathematics	1 Visiting lecturer.
Physics	1 Assistant professor.
Psychology	1 Assistant professor, 3 lecturers, 3 visiting lecturers.
Sociology	1 Professor, 1 instructor.

Thus we see that of the 19 women considered faculty by Princeton for the 1973–74 academic year only 6 are in the direct line of faculty assent.

The availability of competent and even distinguished women, in many areas of academe, who are not actively sought after for jobs for which males who are peers—or less than peers—are sought display the casualness with which anti-discrimination regulations are regarded by many institutions and also laxity of enforcement by governmental agencies. For example the Nobel Prize Winner Marie Geoppert Meyer was not offered a proper academic position until just about the time of her award. Fortunately her contribution was not lost to humanity but I would not like to guess how many contributions emanating from female brains have been lost and in those instances all society suffers.

For an institution, the responsibility for ethical behavior really rests in the hands of the chief executive officer. It is unfortunate that we are at a stage of national development in which implementation of such behavior appears to depend upon threats of financial reprisal against the very institutions which purport to train our next generation to operate by standards that they themselves are reluctant to observe. When a chief administrator makes it clear to middle and lower echelon administrators that sex discrimination will not be tolerated, then quite rapidly this form of discrimination ceases.

Why is it good for the individual, the institution and the country to practice a sex-blind policy with respect to hiring, promotion, etc., of all people based upon *identical quality criteria*? One obvious answer is that one can not predict whether important contributions will first emanate from a male or female mind. The practice of open policies with respect to hiring not only benefits women and minorities, it also benefits white males who for one reason or another have not been included in the inner circle of the buddy system. Announcement of professional jobs in national professional journals and similar places is in the best spirit of American competition. Evaluation of candidates and credentials by a committee rather than by one individual not only helps ensure good choices, but helps to train junior committee members for future administrative responsibilities.

Some institutions do evaluate and hire in an open and forthright maner and are models for the rest. Other institutions are more cynical and practice *ex post facto* advertising in order to be able to check off on an affirmative atcion statement that they have done so. I am giving you here an example of such a practice that I have documented and which involves the Biology Department, University of New Mexico. A few weeks after I received a letter informing me that the position of department head was filled, an ad for that same position appeared in the journal *Bioscience*. Clearly ads should indicate filing date and/or application deadline date. It is well worth noting that the Women's Equity Action League (WEAL) has filed a complaint with DHEW charging that the University of New Mexico exhibits a consistent pattern of discrimination against women, particularly in administrative positions.

From my vantage point I see persistence of discrimination practices by universities and failure to utilize properly one of our most precious natural resources—the intellect of women. Until such a time when institutional management realizes that it is in the best interests of us all to judge all people by the same merit standards the whole country loses and so we depend upon our federal legislators to ensure that one set of standards apply to all.

PURDUE UNIVERSITY,
West Lafayette, Ind., September 23, 1974.

Representative JAMES G. O'HARA,
Chairman, Special Subcommittee on Education, Committee on Education and Labor, U.S. House of Representatives, Cannon House Office Building, Washington, D.C.

DEAR REPRESENTATIVE O'HARA: Thank you for your invitation to submit written testimony for your subcommittee's hearings on compliance with civil rights laws and institutional eligibility for federal funds.

I have always been a vigorous opponent for discrimination of any kind against any individual on the grounds of sex or membership in a minority racial, religious, or ethnic group. I first became concerned about the problem of "reverse discrimination" when a student of mine who was searching for an academic job received a letter from the Sociology Department of the University of Colorado indicating that, as a white male, he could not be considered. He was told that "recruiting throughout the university was almost completely limited to certain categories of persons whose employment would enable the university to meet certain equal opportunity requirements."

I learned, from colleagues and reading at about this time, that my own student's experience was far from unique. Universities all around the country felt pressured by HEW to hire minorities and women preferentially in order, paradoxically, not to be penalized for not meeting equal opportunity requirements.

Although the problem cuts across many academic fields, I will address myself especially to the situation in my own field of Sociology. In the August 1973 issue of *The American Sociologist*, Barbara R. Lorch has published an article titled "Reverse Discrimination in Hiring in Sociology Departments: A Preliminary Report". On the basis of a questionnaire sent to 200 chairpersons of Sociology Departments in a random sample of all four years colleges and universities in the U.S., Professor Lorch concludes that widespread reverse discrimination is being practiced. Her comments at the close of her article are, I think, worth quoting:

"The fact that 32 percent of the sociology department chairmen who indicated that they had positions to fill in the past two years felt coerced to practice reverse discrimination, and 16 percent reported that they actually did, is reason for grave concern. Surely no one can deny the importance of improving the opportunities for employment of women and minorities in academic institutions and in doing everything possible to remove whatever discrimination that is presently occurring in the hiring of women and minorities. But discrimination is removed by non-discrimination, not by added illegal discrimination. Under the Supreme Court's consistent interpretation of the equal protection and due process clauses of the U.S. Constitution, and in light of the plain language of the Civil Rights Act of 1964, hiring should be based solely on qualifications disregarding sex, race, color, religion and national origin. The Affirmative Action Programs, as administered at the time of this research, involve a collision of rights and principles, and in a number of cases are a major factor in coercing department chairmen in academic institutions not only to lower their employment standards and to engage in discrimination, but also to break the law.

"If the goal is to reduce discrimination, then we should be as concerned about discrimination against Anglo males, for example, as against women and minority members. Surely ways can be found to increase the employment opportunities for women and minorities without promoting reverse discrimination."

The matter of reverse discrimination is not limited to hiring of faculty members. It also applies to the awarding of fellowships to students. When I was a student in the 1950s, the goal of many of us was to stop universities from administering scholarships and fellowships which discriminated against minorities. In the main, this was successfully accomplished. Now we find a variety of programs which discriminate against anyone but certain minorities. For example, the American Sociological Association recently announced graduate fellowships for minority students, 1974–75. Eligibility is limited to Blacks, Spanish-speaking and Asian-American (announcement attached). At many universities, including my own, there are other followships open only to Black students and/or other minority students.

I believe that it is important to provide financial assistance to those people who are in need of help to continue their educations. This need is especially great among minority students. But there are many whites as well who are in the same boat. One of these is a man named David M. Gray, of the Philadelphia Health Department, who wrote a letter printed in a recent issue of the Newsletter of the Society for the Psychological Study of Social Issues. He wrote, in part:

"As a member of the white proletariat whose efforts to complete his formal education have been repeatedly thwarted, I am infuriated with the Equal Opportunity Committee and its incredibly naive assumption that ethnic minorities are the only victims of discrimination in higher education . . .

"My father, who is a New Jersey truck-driver, encouraged me to complete my education and helped all he could. However, on his limited income he was also supporting my brother, who has since earned an M.S. in bio-chemistry. . .

"In a recent study (Gray, 1970), I found that the overwhelming majority of graduate departments in all fields make graduate education, especially at the doctoral level, financialy inaccessible to large numbers of qualified students. . . "

On the basis of the factual material available, it is beyond doubt that a substantial amount of reverse discrimination in the universities has been practiced in recent years. In a recent letter to the American Sociologist I stated my reasons for opposing this practice in my own field. I would like to draw on this letter to express these reasons to your committee:

"Reverse discrimination is, first, simply unfair. There are those who argue that since whites and males have received the benefit of discrimination for many years, it must be fair to turn things around for a while. This argument ignores the fact that a completely different set of individuals was involved in past situations. In order to believe that discrimination in favor of A over B today will redress the discrimination in favor of C over D yesterday, one must regard the people involved not as individuals but as abstract and interchangeable representatives of categories. We owe more human treatment to any persons, but in particular to our students and colleagues.

"Besides being unfair, a policy of reverse discrimination opens a Pandora's Box from which may flow untold evil and turmoil. If we must select new faculty (or students, or those to be promoted) on the basis of race or sex, why not on religion or ethnic group? Surely Catholics are underrepresented in Sociology. And how about Poles? Those with Spanish surnames? Italians? Are there not too may Jews? How much weight should various ascribed characteristics be given? For what rewards? The list of such questions is almost endless and they are not trivial. This way lies a morass from which we will not extricate ourselves easily. Award of positions within the profession and university will be determined by a never-ending social and political battle in which those groups with greatest power and the strongest allies will win the greatest share. And who can believe that, once begun, the policy of awarding positions on an ascribed basis can be suddenly stopped? When will there be general agreement that the time to stop has come?

"There are likely to be other serious costs stemming from such a policy. Clearly any school which does not draw impartially upon the widest possible pool of applicants will, either in the short or long run, suffer in academic excellence. Moreover, there is bound to be hostility and division within the profession, the universities, and the larger society, among the various groups which are treated differentially.

"Finally, we should remember that job discrimination is illegal, under the Civil Rights Act of 1964. Inronically, reverse discrimination is now being carried out under the guise of conforming to this Act. Thus, the man who wrote to my student said "We have now learned that recruiting throughout the University is almost completely limited to certain categories of persons whose employment would enable the University to meet certain equal opportunity requirements." According to this reasoning, this student could not be considered in order that the university might provide equal opportunity to all!

"Discrimination against blacks, against women, or against any other group, must be fought vigorously. More than this, we should encourage and facilitate the entrance into the profession of more people from those social groups which have been disadvantaged. But there are other ways for us to work toward these goals. We can, for example, provide more financial aid to needy students, who come disproportionately from among blacks and among certain other social groups. With respect to job discrimination, we can require that, from an equally qualified set of applicants during a specified time period, there not be a consistent underselection of those in a given social category. There are other things we can do to advance social justice. We need not embark on a policy which is unfair to many individuals and which, by abandoning the merit principle, is destructive of the very foundation of the profession."

I appreciate the chance to have expresed my views to your committee.

Sincerely yours,

MARTIN PATCHEN,
Professor of Sociology.

COMBATING DISCRIMINATION IN EMPLOYMENT

(*By Stanley H. Masters and Collette H. Moser*)

In recent years, this country has become increasingly concerned with the issue of racial and sexual inequality.[1] While this problem has many dimensions, economic inequality has received increasing attention. Statistically, relative income differentials are probably the most important measure of economic inequality. For example, the median income of black males was 60.5 percent of white males in 1970, compared with 52.5 percent in 1960.[2] Although this represents some improvement, we are still far from achieving complete racial equality. In contrast, among full-time full-year workers, the median income of females declined from 60.8 percent of the median male income in 1960 to 59.5 percent in 1970.

Although differences in amount and kind of education and in labor force continuity account for part of these income differentials, the most important factor appears to be labor market discrimination.[3] In this paper we discuss efforts to combat such discrimination under Title VII of the Civil Rights Act of 1964 and under federal executive orders requiring affirmative action programs of government contractors. As we shall see, labor market discrimination need not be deliberate, but may often occur despite the conscious intentions of employers. As a result, combatting discriminatiion requires considerable sophis-

In discussing legal efforts to combat discriminatory employment activities, we shall look briefly at the issue of enforcement procedures and then turn to substantive issues regarding the legislation. With regard to procedures, the first question is the scale of federal enforcement effort. As of fiscal year 1972, total appropriations for "private sector equal employment opportunities" were only forty-seven million dollars, with administration requests up to eighty-one million for 1974.[4] Although the projected increase is encouraging, this figure is very small in relation to many other government activities.[5] For example, government expenditures on manpower programs totaled over four billion dollars in fiscal 1972.[6]

---

[1] Throughout this paper victims of racial and sexual discrimination will be referred to as "minorities," although it is understood that women are not a numeric minority.

[2] Calculated from data in U.S. Bureau of the Census, *Current Population Report,* Series P-60, Nos. 36 and 80.

[3] Labor market discrimination is defined as the lower earnings occurring to some group after standardizing for differences in productivity that are not caused by such discrimination. Although it is not easy to estimate how much of the lower educational attainment of blacks or the discontinuous labor force participation of many women is due to labor market discriminating, such discrimination is significant even if one standardizes for the entire differential in education or labor force continuity. For blacks, see Stanley H. Masters, "The Effect of Educational Differences and Labor Market Discrimination on the Relative Earnings of Black Males," *Journal of Human Resources,* Vol. 9, No. 2 (Spring, 1974). For women, our conclusion is more speculative.

[4] *Special Analysis of the United States Government, Fiscal Year 1975* (a part of *The Budget of the United States Government,* 1974), p. 180.

Current enforcement procedures are weakened not only by limited financial resources. The Equal Employment Opportunity Commission (EEOC) set up under the Civil Rights Act of 1964 has virtually no legal power with regard to employers; it is limited to the role of conciliation and negotiation. Until recently suits could be brought only by private individuals or by the Justice Department. Such suits are expensive for private parties, while the activities of the Justice Department in this area have been limited by a small staff and lack of coordination with the EECO.[7]

In 1972 Congress amended the Civil Rights Act of 1964 to enable the EEOC to sue in the courts whenever it believes a violation of Title VII has occurred. While this legislation represents a significant improvement, stronger procedures would have been possible and were seriously considered in the Senate. Under this alternative proposal, the EEOC would have been given the power to issue cease and desist orders. Thus, once the EEOC judged that discrimination had occurred, the firm would not have been allowed to continue that discrimination pending trial. This defeated proposal would have been more equitable since it would give minorities the benefit of the doubt *once* the EEOC ruled that discrimination did exist. Even if enforcement procedures were grealty strengthened, however, important substantive issues would still remain.

SUBSTANTIVE ISSUES IN ENFORCING EQUAL OPPORTUNITY LEGISLATION

Title VII of the Civil Rights Act of 1964 states:

"It shall be an unlawful employment practice for an employer to fail or refuse to hire or to discharge any individual or otherwise to discriminate against any individual with respect to his compensation, terms, conditions, or privileges of employment because of such individual's race, color, religion, sex, or national origin."[8]

While this legislation was designed to improve the economic position of minority groups, it explicitly disavows a number of actions that might be taken to improve the labor market status of blacks, women, and other disadvantaged groups. These restrictions are concisely summarized in a recent article in the *Harvard Law Review*, dealing with the effect of Title VII on racial discrimination.

"The Act's effectiveness in promoting minority employment was limited by the principle of color-blindness. Just as the employer was not to discriminate against minority groups, he was also proscribed from showing preference to them. Employers could continue to set rigorous qualifications for their job openings and test for worker productivity, as long as they did so fairly. The Act thus includes an antipreferential provision (e.g., no quotas are to be necessary), affirms the legality of professionally developed ability tests, and protects bona fide seniority systems. Help was to come to the black community, Congress reasoned, by a newfound opportunity to be judged by objective standards."[9]

Restrictions on preferential treatment might be a small price for minority groups to pay in exchange for objective standards that prohibit discrimination against minority group members; but it is not easy to establish such standards.

Let us start with the issue of discrimination in hiring. We define such discrimination in the following way: Assume that two identical jobs are available in a given company and that there are two equally qualified applicants. If one applicant is a black female and the other a white male, then discrimination would occur if the firm hired the white man but not the black woman.[10]

Now let us examine some of the problems that occur when we try to apply this definition to specific cases. Initially we shall concentrate on questions relating primarily to racial discrimination. The first difficulty is in determining when two applicants are equally qualified. In this area, the most controversial issue has been the role of educational requirements, either amount of schooling (e.g., a high school diploma) or scores on various kinds of tests. Recent studies have indicated that schooling is a very crude measure of one's productivity.[11] While tests might provide a better measure, it is probably impossible to develop tests that are perfect measures of job performance. Moreover, it is expensive to develop tests that are even moderately accurate; the net costs are likely to be high even after taking account of resulting improvements in worker performances. On the other hand, it may also be costly for the firm to ignore potential differences in productivity among its applicants.

---

[5] Note that the actual increase may be much smaller due to Congressional action.

[6] *Special Analysis, op. cit.*, p. 120.

[7] See the discussion in *Federal Civil Rights Enforcement Effort*, a Report of the United States Commission on Civil Rights, 1970, especially Chapter 2, Sections V and VI.

[8] Civil Rights Act of 1964, Section 703.

[9] Employmnt Discrimination and Title VII of the Civil Rights Act of 1964, an unsigned note in the *Harvard Law Review*, Vol. 84, No. 5 (March, 1971), p. 1114.

[10] If there were only one job available and the white male were hired, it would be impossible to know whether this represented discrimination or a random event—unless we had some additional knowledge of the employer's intentions (*e.g.*, qualified applicants were usually hired on a first-come basis and the black woman had applied first).

The Supreme Court has ruled requiring completion of high school or passage of a general intelligence test can be illegal if these requirements operate to disqualify Negroes at a substantially higher rate than white applicants and if the requirements are not shown to be significantly related to successful job performance.[12] Although it is not yet clear what standards of proof the courts will require in order for a firm to demonstrate that its requirements are job related, it appears that the courts will have to become involved in some very difficult issues involving trade-offs between efficiency and equity. As we shall argue later, there may be ways to avoid some of those difficulties by judging equity in terms of results as well as procedures.

Even if we can clearly determine when two applicants are equally qualified, there are other difficulties in determining whether or not an employer is discriminating in the overall hiring process. Specifically, an employer's recruitment policies must be considered along with his hiring requrements. For example, many firms recruit primarily through current employees. Such recruitment procedures have significant benefits for both the employer and those considering employment with the firm.[13] If the present work force, however, is virtually all white male, important issues of discrimination occur.

The courts have generally ruled that such recruitment procedures are illegal if they result in a work force whose racial composition is significantly different from that of the community.[14] The natural remedy is for the employer to begin advertising his job vacancies in media which serves the black community and/or with civil rights organizations. Similar problems arise with the recruitment of women who frequently have limited access to information on job openings. In recent years, women's caucuses in professional organizations are frequently contacted by employers seeking women trained in particular disciplines. However, the question raises: How much new recruitment must be undertaken, especially since quotas in employment are specifically disavowed under Title VII?

Women are subjected to additional discrimination in the hiring process through the concept of men's and women's jobs and the concomitant separate job listings in help-wanted ads. Although such separate listings violate Title VII guidelines, EEOC has had difficulty convincing the courts that "a newspaper which maintains classified advertising columns violates Title VII when it segregates such columns on the basis of sex." [15] However, "due to the Commission's position, and similar positions taken by city and state fair employment practice commissions, newspapers across the country, including the New York City newspapers and the three major newspapers in the District of Columbia, have discontinued the maintenance of sex-segregated columns." [16]

A discrimination issue which affects both women's hiring and work assignment is that of sex segregation of jobs. Under Title VII, the EEOC has ruled that only in exceptional jobs in which sex is a bona fide occupational qualification (bfoq) can jobs be restricted to either sex. The burden of proof of the exception is on the employers. Recent court decisions have viewed bfoq as follows: "A determination that sex is a bfoq for a job cannot be made on the basis of general assumptions regarding the physical capabilities of men and women. In order for sex to be a bfoq for a job, it must be established that the sexual characteristics of the employee are crucial to the successful performance of the job, as they would be for the position of wet-nurse; or that there is a need for authenticity or genuineness, as is the case for the position of actor or actress. In other words, discrimination based on sex is valid only when the *essence* of the business enterprise would be undermined by not hiring members of one sex exclusively." [17] Even some state laws which prohibit the employment of women in certain occupations have been held invalid by Title VII.[18]

---

[11] For example, see Ivar Berg, *The Great Training Robbery* (New York: Praeger Publishers, 1970).

[12] See Willie S. Griggs vs. Duke Power Company (U.S. Supreme Court, No. 124, March 9, 1971).

[13] For example, see "Information Networks in Labor Markets".

[14] See *Harvard Law Review, op. cit.*, pp. 1153–55. As that discussion indicates, however, if an employer's recruitment policies appear to be discriminatory on this basis, it seems reasonable to give the employer a chance to demonstrate that blacks have less interest or skill than whites in his line of work.

[15] Sonia Pressman Fuentes, "The Law Against Sex Discrimination in Employment" (paper presented at the MDK Associates Seminar on Affirmative Action, Dallas, Texas May 16, 1972), pp. 12–13. The EEOC position was not sustained by the District Court in the case of Brush v. San Francisco Newspaper Company. The case was pending on appeal as of 1972.

[16] *Ibid.*, pp. 5–6, 13. For example, in 1971, courts rule sex-segregated columns held in violation of the state fair employment practices laws in Pennsylvania and New Jersey.

Next let us turn from the issue of discrimination in hiring to other issues of discrimination in employment. Perhaps the most important of these issues are promotions, layoffs, and discharges. Promotions and discharges are based partly on ability (or lack thereof) and thus qualification standards in these areas are subject to many of the same issues as hiring standards.[19] However, seniority also plays an important role in most promotions and almost all layoffs. If there is no history of discrimination in hiring, then seniority rules pose little difficulty since seniority is easier to measure objectively than most other potential criteria. However, if there has been past discrimination, then seniority rules may help to perpetuate this discrimination far into the future.

Let us assume that, prior to the Civil Rights Act of 1964, a firm employed blacks and women only in certain unskilled, low-paying positions, and that, for white males, there was a well-defined ladder for advancement, with promotions going to the person with the most seniority among those in the next lowest job who are considered qualified.[20] Let us consider how blacks are to be integrated into this seniority system after passage of the Civil Rights Act. Three main possibilities which have been advanced are:

"(a) 'freedom now,' requiring displacement of white incumbents by blacks who, without discrimination in the past, would have had their places; (b) 'rightful place,' allowing a black to compete for a position on the basis of his total company service (without having to advance through each step of the ladder); and (c) 'status quo,' preserving intact the rights of white incumbents (blacks must start at the bottom of the white ladder and advance through each step on the same basis as newly entering whites)." [21]

Congress clearly indicated that it was not reqiuring the freedom-now approach when it protected bona fide seniority systems.[22] Of the two alternatives, the rightful place test has been generally acepted by the courts.[23] Of course, there may be little practical difference between the "rightful place" and "status quo" approach if skills must be learned during each job on the ladder. Consequently, even if all discrimination in hiring and recruiting should cease, it could still take a long time to eliminate all the effects of past labor market discrimination.

Discrimination charges have been levied against a number of firms because of their employment policies toward pregnant employees. The major issues involve the requiring of leaves of absence or the termination of employment contrary to the wishes of the employee. In general, the decisions of the courts and the EEOC hold that it constitutes sex discrimination for an employer:

---

[17] Fuentes, *op. cit.*, p. 5. A few of the significant court cases on bfoq are as follows: *Dias v. Pan American World Airways, Inc.*, 3EPD para. 8166 (5 Cir. 1971); *Weeks v. Southern Bell Telephone Co.*, 408 F. 2d 228 (C.A. 5, 1969); *Cheatwood v. South Central Bell Telephone and Telegraph Co.*, 303 F. Supp. 754 (M.D. Ala., 1969).

[18] See Sec. 1604.2, EEOC Rules and Regulations, 37 Fed. Reg. 6835 (April 5, 1972); *Rosenfield v. Southern Pacific Co.*, 3 EPD para. 8247 (C.A. 9, 1971).

[19] Although differences in pay based on sex or race are a critical discrimination issue, such distinctions are usually engineered through the job title or seniority system. Where pay differences for some job status have been investigated, they have been ruled illegal.

[20] If the firm (or union) is all white, a more extreme possibility is to apply the following analysis based on blacks in the community rather than on blacks in low-paying jobs within the company. See *United States v. Sheetmetal Workers Local 36*, 416 F. 2d 123 (8th Cir., 1969).

[21] *Harvard Law Review, op. cit.*, p. 1159. Separate seniority lists based on sex differences have also been ruled in violation of Title VII. A classic case of such separate seniority lines for men and women is that of Libbey-Owens Ford.In 1970 case, the Justice Department suit against the company was terminated by a consent decree in which the company was required to give the women two opportunities to bid into another department and to provide extensive education and training in advance of transfer. Local 9 of Glass and Ceramic Workers v. Libbey-Owens Ford (U.S. District Court in Ohio).

[22] However, this approach may be an appropriate remedy for a discriminatory system in effect after the Civil Rights Act of 1964 became effective. See Alfred W. Blumrosen, *Black Employment and the Law* (New Brunswick, New Jersey: Rutgers University Press, 1971), pp. 202–205.

[23] *Harvard Law Review, op. cit.*, p. 1159.

(1) To fail to accord a pregnant employee the right to work as long as she was not physically disabled;

(2) To cause a female employee to lose seniority because of absence for pregnancy, miscarriage or childbirth;

(3) To fail to provide female employees the same hospitalization and medical benefits as are provided for wives of male employees;

(4) To fail to provide the same sicknes and disability benefits for absence when disabled because of pregnancy, miscarriage, or childbirth as are provided when an employee is absent on account of other nonoccupational disability.[24]

So far we have argued that it is going to be very difficult to eliminate all discrimination in employment simply by trying to apply the "color-blind" and "sex-neutral" standards of Title VII. Moreover, even if such discrimination could be eliminated, the effects of past discrimination would persist far into the future. Thus we need to consider alternative approaches to combatting discrimination.

AFFIRMATIVE ACTION REQUIREMENTS

The major alternative to the present legal concept of color-sex blindness is the imposition of some kind of quota system. At least two variations of the quota approach are available. The first, which might be called inflexible quotas, means that firms must employ at least a certain percentage of minorities and that no exceptions will be allowed. The second, which might be called target quotas, means that the burden of proof is on the employer to show that he has not discriminated (or has fulfilled his contract commitment to take "affirmative action") if he does not employ as many minorities as stipulated by the quota. To avoid confusing inflexible and target quotas, the latter are usually referred to as goals rather than quotas. While Congress clearly indicated that Title VII was not to be interpreted as requiring any quota system, the executive branch has established a system of "goals" with regard to government contractors.[25] Moreover, this system has been upheld in the courts and has been tacitly accepted by Congress.

The government began its present affirmative action program with the Philadelphia Plan, instituted in 1967. Under this plan, contractors for government construction projects in the Philadelphia area must make "good faith" efforts to meet certain goals with regard to the hiring of minority workers. These goals are determined by the Office of Federal Contract Compliance (OFCC) on the basis of such factors as the new hiring predicted for the contractors, the number of minority-group members having the necessary skills, and, if this number is limited, the length of time necessary for training. Then these goals, indicating the number of minority employees to be hired in specified trades by specified times, are included as part of the job specifications on which the contractor bids. Although the Philadelphia Plan does set up very specific goals, these goals originally applied only to the actual government contracts and did not apply to the contractor's employment on other projects. Since firms could meet these requirements by switching black workers from their private projects rather than by hiring more black workers, the program has recently been changed to cover a contractor's total employment.

Failure to meet the specified goals does not necessarily imply that the contractor has failed to comply with the terms of the contract. In the words of the *Harvard Law Review*:

"A contractor can escape sanctions by providing that he made 'every good faith effort' to meet the requirements. Signs of a good faith effort are: (1) communications of employment needs to certain minority community organizations; (2) maintenance of records showing disposition of minority job applications; (3) participation in community minority training programs; and (4) notification of the OFCC area coordinator whenever the employer's efforts to meet his goal have been impeded by union referral practices. It is specifically noted that failure of a union with which the contractor has a collective bargaining agreement to send minority applicants is not a sufficient excuse for noncompliance. Though the precise procedural consequences of failure to meet goals are not outlined in the Philadelphia Plan, it has been assumed that failure to meet specific goals forces the contractor to assume the burden of producing evidence of his good faith effort to meet his goals while the government has the ultimate burden of persuasion on the issue of noncompliance with the Executive Order program." [26]

---

[24] "Keeping Up With the Law," Summary, Legal Dept., Int'l. Union of Elec., Radio, & Machine Workers, January, 1972. A large portion of the cases have concerned teachers where leaves of absence have been required after the fifth month of pregnancy. In most but not all of the cases, courts have ruled that the requirement is arbitrary and violates the equal protection clause of the 14th Amendment since it treats pregnancy different from other medical disabilities and without regard to the differences in individual abilities. See, for example, 1972 cases of Bravo v. Board of Education, City of Chicago (Northern District of Illinois); Le Fleur v. Cleveland Board of Education (6th Circuit, Cincinnati).

[25] See James E. Jones, Jr., "The Bugaboo of Employment Quotas," *Wisconsin Law Review*, Vol. 70, No. 2, for a discussion of the legal aspects of the quota issue.

Originally the Philadelphia Plan was developed as a model to apply to other cities. However, the government's current approach is to encourage the development of "hometown plans," agreements negotiated among unions, contractors and minority-group representatives to increase the employment of the minority-group on all construction projects in the area. If no satisfactory hometown agreement is negotiated, then the government can fall back on the Philadelphia Plan approach.

The government began its affirmative action program on construction, possibly because: Urban renewal and government building tend to take place in areas of high minority concentration. In many kinds of work, discrimination can be concealed behind closed doors. But the presence of an all-white construction crew working outdoors in plain sight in a black community is a 'blatant insult.' [27]

Although union jobs in the skilled construction trades pay very well, they are only a very small percentage of total jobs in this country. Consequently, it was important for the OFCC to develop an affirmative action program for federal contractors in areas outside of construction. Such a program has been developed and is currently expressed in Revised Order No. 4. This order, which was formulated in December, 1971, requires nonconstruction contractors with 50 or more employees on contracts of at least $50,000 to have affirmative action programs that include:

(1) A self-analysis to determine whether women and minorities are being underutilized in one or more job classifications.

(2) Corrective action, including goals and timetables, to remedy any deficiencies.

(3) Development or reaffirmation of an equal opportunity policy and dissemination of this policy both internally and externally.

(4) Establishment of a director or manager of Equal Opportunity Programs with many detailed responsibilities in identifying problem areas and developing appropriate programs.

(5) Implementation of internal reporting systems to measure the effectiveness of the affirmative action program.

(6) Support for community and national programs that are designed to improve the educational opportunities available to women and minorities.

One of the most controversial uses of Revised Order No. 4 has been the application of affirmative action requirements to universities, requirements applying to the employment of women as well as blacks. Although educational institutions had been exempt from Title VII until the 1972 amendments to the Equal Employment Opportunity Act, application of Executive Orders 11246 and 11375 had placed the federal government in the position of overseeing the internal operations of the universities. Backed by Revised Order No. 4, the Department of Health, Education and Welfare and the Office of Civil Rights have heard charges of sex discrimination levied against hundreds of universities. In some cases, HEW has threatened to withhold funding because charges of discrimination have been intense (e.g., at the University of Michigan where federal funding amounts to about $60 million). Just as visibility in the black community had made construction work a target for combatting discrimination in the employment of black males, the visibility in the employment and production of educated women gives the university the responsibility for changing patterns of sex-stereotyping and discrimination.

Revised Order No. 4 applies to women as well as blacks. Nash summarizes the other main differences between this program and the Philadelphia Plan:

"The primary difference between the two programs is that the OFCC or an appropriate regional organization analyzes the factors leading to appropriate goal formulation in the construction program, while under Order No. 4 each nonconstruction contractor must make his own analysis. This difference is dictated by the need for a uniform affirmative action approach by each employing entity. Most nonconstruction contractors maintain a relatively constant work force and can establish their own consistent program. But since the construction work force in any locality is in reality employed by all of the construction contractors in the area, goals and timetables for the latter, in order to have a meaningful application to employment, must be developed for the single-employer entity (all contractors) and their employees (all construction employees who move from job to job). The essential requirement of coordinated goal setting is obtained under both programs.[28]

---

[26] *Harvard Law Review, op. cit.*, p. 1298.
[27] *Ibid.*, p. 1294.

While the goals and timetables are initially set by the nonconstruction contractor, these goals and timetables can be revised by the OFCC under Revised Order No. 4. For the programs under Revised Order No. 4, as for those in construction, goals and timetables are to be based on objective factors, such as the availability of minority workers at different skill levels, the existence of training opportunities, the expected turnover of present employees, and expected changes in the size of the work force. In the construction industry, specific goals and timetables are included in the contract and are subject to the same enforcement procedures as would apply to any other specifications in the contract. While contracts can be terminated under Revised Order No. 4, this process is often too time-consuming to be very effective. However, the threat of losing future government contracts as a result of inadequate affirmative action programs can be very effective under this order.[29]

THE ADVANTAGES AND DISADVANTAGES OF AFFIRMATIVE ACTION REQUIREMENT

Now that we have summarized the current status of affirmative action requirements, let us discuss more carefully the advantages and disadvantages of this approach. The advantages of the affirmative action requirements compared with the color-blind sex-neutral standards of Title VII are that such requirements are more oriented toward positive actions to help minorities and place a clearer burden of proof on employers with few minority workers.

Despite these advantages, the present affirmative action programs have been fairly controversial. On the one hand, the programs have been criticized for not being tough enough. Proponents of a tougher approach sometimes advocate a system of inflexible quotas. However, this approach does not appear feasible politically and might reinforce racist and sexist stereotypes if minority group members were placed in jobs for which they were not qualified. If inflexible quotas are repealed in favor of the present emphasis on goals, timetables, and good faith efforts, then the crucial issues are: (1) how ambitious the goals and timetables should be, and (2) how vigorous the government will be in going after firms that make only a minimal effort to meet their goals.

While many feel that present governmental enforcement efforts are too weak, on the other hand others feel that the whole affirmative action approach is too stringent on anti-discrimination strategy. Advocates of this view have generally focused on three objections to the affirmative action requirements—an efficiency argument, and equity argument, and a political argument. The efficiency argument maintains that any affirmative action program will increase a firm's costs since it would be under pressure to hire blacks and women when it would otherwise have been free to hire more highly skilled white males. While this argument might have some validity for a system of inflexible quotas, the present affirmative action programs only require an employer to make a good faith effort to meet his target for minority employment. If he has made every reasonable effort to recruit (and/or train) qualified minority workers, then he would not be subject to any sanctions. While an employer might be required to undergo some extra expenses for recruiting and training minority workers, it is not clear that such costs will necessarily exceed the costs that a firm might incur by ignoring the potential availability of such workers. (cf. Becker's view of discrimination)

---

[28] Peter G. Nash, "Affirmative Action Under Executive Order 11246," *New York Law Review* (April, 1971), p. 235.

[29] *Ibid.*, p. 255. Ashenfelter and Heckman find some evidence that affirmative action requirements have been effective in increasing black employment. More specifically they conclude (p. 11), "First we find that the relative employment of black male workers increased by 3.3 percent more over the period 1966 to 1970 in firms with government contracts than in firms without government contracts, and that this difference is statistically significant. Second, we find that the relative occupational position of black male workers increased by .2 percent more in firms with government contracts than in firms without contracts, but that this difference is not statistically significant." See an unpublished report by Orley Ashenfelter and James Heckman entitled, "Changes in Minority Employment Patterns, 1966 to 1970."

The equity argument maintains that if the individual workers or employer has not discriminated against blacks or women, then he should not have to bear the major burden of any costs involved in improving their economic position. Instead the cost should be borne by society as a whole (e.g., through general taxation). Of course, this argument assumes affirmative action programs do involve important costs to firms and to white male workers. As we have just seen, this argument is somewhat questionable in the case of firms. On the other hand, some white males certainly are hurt by affirmative action programs. The greatest costs in this regard would occur if present employees were laid off so that additional blacks and women could be hired. Such an extreme proposal has been ruled out on equity (and political) grounds. However, white males seeking new jobs will be hurt by affirmative action programs. Two points need to be raised in this regard. First, the cost to such white workers can be minimized if the government pursues fiscal, monetary, and manpower policies to ensure full employment. Second, since the government affirmative action requirement demands only a good faith effort by government contractors and since discrimination does still exist in the labor market, any harm suffered by white males as a result of affirmative action programs should be viewed primarily as a cost of reducing discrimination against minority groups rather than as an example of discrimination against white males. While we believe that these arguments make it difficult to attack the present affirmative action programs on equity grounds, these equity considerations do suggest that such programs are likely to face political difficulties.

Numerous political arguments have been advanced against affirmative action programs. First, such programs have been criticized for dividing the working class politically and thereby hurting the economic position of all workers.[30] While this argument may have some validity, the lack of any significant action against discrimination may also lead to tension between workers of different race or sex. A closely related argument maintains that minority workers may be helped more (and at less political cost) if political efforts are concentrated on establishing and *maintaining* tight labor markets.[31] But this is simply an argument for putting top priority on tight labor markets and not an argument for abandoning affirmative action requirements.

Next, some argue affirmative action programs may reinforce racist and sexist stereotypes since giving some referential treatment to minorities suggests they are unable to compete successfully on the basis of their own ability.[32] While this argument might have merit if employers were forced to hire unqualified applicants, there is no such requirement in the present affirmative action programs. By putting employers under more pressure to hire qualified minority workers, the present programs may actually help break down present stereotypes by providing more examples of successful performance by minority workers.[33]

Another criticism which has been raised by the affirmative action "backlash" is one of excessive government intervention, particularly with regard to the educational process. For example, in a speech reprinted in *U.S. News and World Report*, Dr. George Roche, President of Hillsdale College in Michigan, maintains present affirmative action programs put "at stake the institutional integrity of higher education":

> "The present situation can be summarized as an assault upon the standards and integrity of the institutions involves. . . Already numerous individual injustices, assaults upon the dignity and integrity of our educational institutions, and bureaucratic interferences with the educational process have accumulated so rapidly that it will take book-length treatment to examine all the practical and philosophic implications raised by affirmative action"[34]

Such a criticism combines our earlier economic-efficiency argument with a political argument concerning government intervention. With regard to the efficiency argument we need only emphasize that affirmative action programs no more require the hiring of unqualified Ph.D.s than they do the hiring of unqualified plumbers. The government-intervention aspect of the argument is also unpersuasive. Affirmative action programs are not placing controls on what is to be taught or what is to be researched—issues which are truly at the heart of academic freedom. Moreover, these programs do not require that individual A be hired rather than individual B. The federal government is simply saying that as a *quid pro quo* for using federal contract funds, the university must subscribe to a program of affirmative action toward minority employees and students.

---

[30] For example, see Bayard Rustin, "The Blacks and the Unions," *Harper's Magazine* (May, 1971). This line of reasoning is also consistent with the radical analysis.

[31] Such costs would include: (1) the possibility of not having any positive impact on government policy, (2) trade-offs between present and future gains for minority groups, and (3) labor market gains versus gains in other areas such as educational opportunities.

[32] For example, see *Harvard Law Review, op. cit.*, p. 1166.

[33] In addition, employers are under pressure to see that minority members get better training.

[34] *U.S. News and World Report*, January 1, 1973, p. 52.

In summary, we believe that the present affirmative action programs are an important policy device for reducing discrimination in the labor market. While they have been attacked on several grounds, we do not find these attacks very convincing. In fact, we believe that these programs should be strengthened—especially with regard to their enforcement procedures since the mere existence of an affirmative action plan does not assure implementation and results. As in labor relations generally, distinguishable between "good and bad faith" efforts is difficult.[35]

On the other hand, affirmative action is not the sole answer to the discrimination problem. Changing people's attitudes, improving the marketable skill of minority group members, and maintaining tight labor markets are also important. Rather than viewing such alternative policies as potential substitutes, it appears best to view them as complements since each is likely to be more effective if the others are being pursued with some success.

UNIVERSITY OF CALIFORNIA, BERKELEY,
Berkeley, Calif., September 24, 1974.

Hon. JAMES G. O'HARA,
Chairman, Special Subcommittee on Education, Committee on Education and Labor, House of Representatives, Washington, D.C.

DEAR CONGRESSMAN O'HARA: I am pleased to respond to your suggestion that I submit a statement to your subcommittee for inclusion in the committee's hearings on the nature and operations of so-called affirmative action programs in universities. I am also taking the liberty of sending you copies of two articles on this subject which I wrote two years ago for *Commentary* magazine.

These articles continue to represent the views which I now hold. The following remarks are in the way of amplifying them. I believe now, as then, that in practice quota-hiring violates the essential principle of merit, and is unfair in that it introduces invidious criteria of race into a profession which, one would think, had sought to abandon such practices. I also believe that such practice is unlawful, in that it violates the Civil Rights Act of 1964. While the Supreme Court has yet to address the question of the constitutionality of these particular practices in colleges and universities, I think a strong case can be made that, regardless of the Civil Rights Act, they are, in any event, unconstitutional. The effects of such practices cannot fail to lower the quality of academic faculty. This in turn will inevitably lower the quality of instruction which students receive.

These points are spelled out in some detail in my article, "HEW and the Universities," in *Commentary*, February 1972. A more general case, for the supremacy of merit as criterion of personnel evaluation, can be found in my article, "The Idea of Merit," in *Commentary*, December 1972.

At the present juncture, I would now like to highlight four aspects of the administration of affirmative action.

The first of these is the question of government control over internal practices of universities having contractual relations with it.

The use of federal contract compliance as a lever for control over the internal operations of universities will be with us for a long time. There are few major universities which are independent of such contractual ties. Some are so dependent that the withdrawal of federal contracts could shut them down. The eargerness to comply with federal directives may be explained in large measure by this fact. This lever, or weapon, in the hands of the federal government is, in the abstract, neutral as to the objects it directs itself toward. I think that a case can be made that it should be used with the greatest of care, and in fact limited to those units of a university directly engaged in the performance of contractual obligations. As you know, this has not been the case in HEW's unauthorized use of it as a lever to alter and to superintend academic hiring practices. For example, it is my understanding that the great bulk of Columbia University's federal contracts go to its Medical School. Yet contract-cancellation was there threatened, as elsewhere, unless Columbia agreed to a hiring policy applicable to the entire University.

---

[35] Some have accused employers of engaging in "bad faith search" efforts, particularly at the university level. Employers obtain names of women, blacks, and other minorities, and make only vague attempts at recruitment. They then use these names to "pad" their affirmative action "good faith" effort recruitment list.

The contract weapon is not confined to hiring practices alone. Other agencies of HEW have used the weapon and threat of grant cancellation to obtain other goals. For example, it is used as a lever to regulate the nature of research projects. Recently, under considerable protest, HEW rescinded a proposed censorious directive which would have required universities to purge so-called "sexist" materials from classroom instruction. So also, HEW has insisted that universities establish review committees whose task is to inquire into problems of "social risk" entailed in research on human subjects and to disallow research deemed in violation of HEW standards. In both of these cases, the actual administration of such federal policies (based, incidentally, on no law) is delegated to university officials; but they are nevertheless under constraint to abide by norms devised by government bureaucrats.

The knife can cut both ways. In his *amicus curiae* brief to the Supreme Court in connection with the DeFunis case last spring, Professor Archibald Cox (in my view correctly) pointed out the implications of federal intervention in the admissions policies of private colleges and universities. The right of Harvard University, and Harvard College in particular, to employ criteria other than scholastic merit exclusively, in shaping the social and cultural composition of its student body, is a matter, he argued, for Harvard to determine and not for the government. I did not agree with Professor Cox' further contention that this was also true for publicly supported state colleges and universities. But the point must be made that it is extremely unwise for the federal government's power—that of its sprawling bureaucracy—to continue to expand into the operations of higher education. We know enough by now, having seen the clumsy and often contradictory operations of HEW in affirmative action, to know that low- and middle-level government officials are hardly qualified to determine how quality education should be administered. This is especially so when government policies, in executive orders, are devised and promulgated by bureaucracies in the absence of any legislation from Congress authorizing them. In the case of affirmative action policies, as I noted above, in fact the executive orders stand in direct conflict with existing law.

My second point addresses itself to the vast costs which the administration of affirmative action programs now imposes upon universities and colleges. It is hardly a secret by now that compliance procedures inside universities are extraordinarily cumbersome.

The hiring of new personnel, and their advancement, are initiated at the Department level. Departments typically are now required to undertake elaborate ritualistic modes of search, which in their rigidity make it difficult for them to operate with the flexibility they should possess. Extensive proof that no discrimination has been entailed in each choice is required of them. In my Department at the Berkeley campus of the University of California last spring, for instance, two weeks of the time of the Department's chief administrative deputy and a full-time secretary was taken to assemble affirmative action proof material (for submission to the Chancellor), in connection with the hiring of two non-tenured Assistant Professors. In a University campus with more than 80 Departments, the cumulative effect of this may well be imagined. In turn, many administrative personnel on a campus-wide basis are required to scrutinize and evaluate this material. It has been estimated, for example, by a well-qualified student of this subject, Ms. Lucy Sells, that the number of officials on the Berkeley campus required to process all of this paper connected with affirmative action comes to between 18 and 24 FTE's—i.e., the full-time equivalent of 18–24 faculty members. And this at a time when the University in a steady state is not even able to afford to replenish its faculty when retirements, resignations, and deaths occur. It will may be supposed that the *national* costs of this exercise are simply gigantic. If universities were in a condition of prosperity, they might better be able to afford this. But they are not.

In point of fact, of course, this vast, costly activity is based upon what seems to me a fundamental assumption of HEW—namely, that universities and colleges in the matter of discrimination are guilty until proven innocent. *Every* case of hiring must be scrutinized; each must be found clean. It is as though a Department of Motor Vehicles required motorists to take a driver's test every time they stopped for a red light.

But of course we finally come to the point of all this: it is supposed that such practices will have the tangible result of increasing the number of women and minorities employed. The university's agreed "goals" will be expedited. Yet a moment's reflection would show that if there is fairness in such cumbersomeness there is really no way of conceivably knowing how the statistics ultimately will turn out. It is only if criteria essentially unfair are employed that the statistical consequences can be rigged to fulfill the agreed goal.

My third point refers to what may be called "do-it-yourself affirmative action." I find it entirely possible to imagine that within the Department of Health, Education, and Welfare there are officials who are genuinely committed, in principle, to the idea of quality education. In turn, I also assume that few of them would wish to condone many of the egregious practices of blatant discrimination which currently are carried out by others in the name of affirmative action. The problem is that their policies have inspired practices in some colleges and universities going far beyond what they themselves would agree to be "reasonable." It is my view that it is essential for HEW now to make clear that it is *abandoning* quota criteria and statistical tools, since these are improper. It must itself now take the leadership in seeing that such practices are not perceived as lawful, even when engaged in voluntarily. It would not be the first time in recent months that a federal government agency has turned from lawless to lawfull activity.

My fourth and final point is this: Many of us who have opposed HEW's affirmative action policies from the beginning have been subject to considerable criticism and attack from many quarters. Some of the criticism, as might be expected, has been bitter; we have been called racists, sexists, and so forth. But there is one criticism which warrants some thoughtful response. It is that, in our opposition to these blunt and crude measures of social improvement, we offer no alternative means of melioration. The implied assumption of this charge is that reverse discrimination is necessary since "nothing else works."

Now one can make an abrupt response to this charge. Briefly, it is this: that reverse discrimination acts as unfairly on *individuals* as does front-drive discrimination. If we assume reverse discrimination to be necessary as an agreed *social* policy, as a means by which Society repays victims of previous discrimination, *Society* in fact does not repay. Innocent individuals do. The costs are borne by those individuals who are unfairly, and illegally, displaced because they, as individuals, are not of the right sex or race. If it were determined by Society, through proper legislation, that the social good would be served by hiring more persons in disadvantaged classes, then Society should pony up the resources to do so, in a way which would not have the effect of displacing or excluding qualified persons. Even then, of course, important questions of equity would remain. The matter of "disadvantagedness" in society can hardly be accounted for in terms of sex and race. The bulk of America's poor today are white. I suspect that many of those now officially classified as disadvantaged, and eligible for preferential treatment, are not, as individuals, disadvantaged.

Yet the charge still remains: many of us have said little which is positive. That has certainly been true in my case. The main reason for my silence in this matter is that I am genuinely baffled. What actually is it that is wanted in affirmative action? How would we know an authentic condition of social equity in higher education when we saw it? What would be the kinds of methods and strategies which could achieve such equity without significant sacrifice of quality? How would one devise a federal strategy so to influence the habits, interests, and wishes of a nation of individuals as to guarantee proportional representation of social categories in higher education faculties? In general, it would seem to be wise social policy to address ourselves to questions of quality of performance rather than statistics of results. It would be a supreme irony if proportional representation were achieved in higher education only at the price of leveling it. A bad university is worse than no university. Federal and state authorities, having the resources with which to *endow* and to encourage quality, do not themselves have the ability to create it. The implications of this point in the following direction: the universities themselves must remain committed to known standards of quality as the central justification of their existence.

Sincerely yours,

PAUL SEABURY,
Professor of Political Science.

THE IDEA OF MERIT

(By Paul Seabury)[1]

Our Honours, and our Commendations be Due to the Merits, not Authoritie.
—ROBERT HERRICK,
"Merits make the Man," *1648.*

The current American social squall has caused a number of logistical difficulties for beleagured liberals. How do we protect certain long-taken-for-granted liberal virtues at a time when few things are taken for granted? Going to the closet for some old, trusted weapon, we likely as not find it rusted from disuse, or inappropriate for the occasion, or we find we have forgotten how to use it, if ever we did know.

So it was for me a couple of years ago at Berkeley during the Free Speech Movement convulsion. One afternoon at its furious height, I went off to read and think about the Essential Nature of the University, thus better to grasp what the real issue was. I sought and found Ortega y Gasset's fine book, *The Mission of the University*. But by the end of the afternoon I realized I had wasted my time; the book was useless to me. The circumstances of Spanish universities in the 1930's were wholly alien to the situation I was involved in, and Ortega's prescriptions pointless. What else should I have read? I still am not sure.

In such confusion, we are especially caught off guard when militant enthusiasts use intellectual arguments for profoundly anti-intellectual causes. Normal life seems always to require that its beneficiaries take too much for granted, and thus it is that lazy innocents are not the only ones who are condemned to repeat history because they never learned it.

Much the same intellectual difficulty afflicts us now, in the current onslaught upon the idea and practice of merit and excellence in American occupations and institutional life. Merit, and its twin, equal opportunity, have been thought to be firmly woven into the fabric of American democratic thought. Possibly they still are. But the tension at the seams is rather great.

Let us consider the idea of merit. As a conception of justice, it means "to each according to his abilities," or in another and closely related sense, "to each according to his works." In these two combined senses merit advances and rewards according to ability and accomplishment, rather than according to status, preferment, or chance. But we are now told by the critics of merit that either its standards are themselves unfair and discriminatory, or that the fair and uniform employment of such standards leads to unequal and unjust results. And there are also those who argue that the idea of merit is in any case no more than the means whereby an abhorrent middle-class system coopts its new retainers. (Edgar Z. Friedenberg, who among other things is a consultant to the College Entrance Examination Board, has recently written, for instance: "A people dedicated to competition and manipulation surely find their social preferences sustained by the kind of testing that has evolved. Granted the College [Entrance Examination] Board, Robert McNamara follows.")

In current American circumstances, when the anti-hero cult is very prominent, it is difficult to believe how recently the ethos of merit and achievement was honored in American life, even to excess. Only a decade ago, John Gardner's *Excellence* (1961) achieved best-seller status, a bit perhaps like the glorious appearance of Minerva the Owl at twilight. A little earlier, in the 1950's, there were two quite different but equally formidable figures who argued forcefully for merit and achievement: Adlai Stevenson and Hyman Rickover, both of whom appealed, if for somewhat different reasons, for an improvement in the qualitative performance of American life. Throughout that entire period, in fact, the dominant American emphasis in training and education and advancement was more and more upon improving quality.

But of course the idea of merit goes back beyond the 1950's and has the deepest of roots in American democratic thought. The case for merit in America was most authentically laid out by Jefferson, whose view of an open democratic society depended upon his conception of a natural aristocracy based on "virtue and talents." This he contrasted with what he had noticed in Europe: an "artificial aristocracy founded on wealth and birth without either virtue or talents." The natural aristocracy, he asserted, was "the most precious gift of nature for the instruction, the trusts, and the government of society," and education was needed to foster it. No wonder, then, that Jefferson wished most to be remembered as founder of the University of Virginia; he might have been memorialized also for his establishment of universal primary education in his state. Such acts and others for which he was responsible like the abolition of the right of entail and of primogeniture, "laid the axe to the root of Pseudo-aristocracy." Now, given equal opportunity, talent and merit would naturally arise in great numbers, from among the rich and the poor alike.

---

[1] Paul Seabury, professor of political science at the University of California at Berkeley, contributed "HEW & the Universities" to our February number. The present article is adapted from the Samuel Lieber Memorial Lecture which Mr. Seabury delivered at the New School for Social Research last month.

John Adams—more of a realist than Jefferson—raised a special objection to his friend's optimism. "Nobility in Men," he replied, "is worth as much as it is in Horses Asses [*sic*] or Rams, but the meanest blooded puppy in the world, if he gets a little money, is as good a man as the best of them." Subsequent historical experience lent weight to Adams's warnings. In retrospect, we can note the many anti-meritocratic tendencies which crafty Americans devised: elitist, as to be seen in successful attempts of status groups to maintain privilege by denying merit as a means of access to it; populist, as to be seen in Jacksonian democracy's spoils system—which flaunted patronage in the face of skills and qualifications; and meliorative, as to be seen in efforts to check undesired consequences of cutthroat competition. Yet it is safe to say that none of these quite different countervailing tendencies, or all in combination, really succeeded in overwhelming the Jefferson ethic. The generations of American thinkers who succeeded Jefferson were agreed with him on the ethos of equal opportunity: rich and poor alike should be exposed to knowledge and skills; these would both equip and license entry into a broad, if competitive, world of opportunities and choices. The general quality of life would improve; arts and letters would flourish; all men would be evaluated against the common standards of their calling.

In considering the various current arguments against merit, there is one powerful case which Jefferson's contemporaries probably never thought of. It is that merit, as both a right and a standard, is a device to inveigle people into bourgeois society. Both the knowledge purveyed, and the criteria used to discover which persons have best or adequately absorbed it, are now deemed by some as nothing more than techniques by which a technological system perpetuates itself. The anti-skill culture out of which his critique emerges is at the same time an anti-intellectual culture, attacking the authority of knowledge and reasoning processes in general in the name of intuition and creativity. Kingsley Amis and Robert Conquest, in their sardonic *Short Educational Dictionary*, provide an introduction to the attitudes of this culture:

Alphabet, a set of arbitrary . . . signs which children are still often compelled to learn by rote; usually taught, moreover, in an arbitrary order.

Examination, an irrelevant, external test purporting to check a student's knowledge by a set of written questions often repugnant to his personality, and failing to take into account the distractions inevitable in a concerned life.

Standards, irrelevant academic concept designed to exclude or penalize students distinguished for either concern or creativity or both.

Underachieving, coming out at the bottom in tests designed to measure . . . ability to memorize irrelevant facts and accept bourgeois indoctrination.

In addition to attacking knowledge and reason in the name of spontaneity and intuition, this movement also attacks them in the name of equality. According to Edgar Friedenberg, the existing educational system is a process designed to prevent the "underclass" from getting in, and to keep the middle class on top. (Yet he also seems to think that tests and standards are capricious, as when he says that they are "not so much a poker game as a crap game, and some young people have decided not to take any more crap.") Real education, for Friedenberg, is "shared experience, and only that." Its principal object is to establish a sense of "community among students." To that end, he (and many others) would abolish skill and competitive criteria in evaluations, and even rate competitiveness negatively. For, he argues, "tests that select out for a common reward people whose special excellence is in competition and the fragmentation of experience are not going to bring together a group who are likely to enrich one another, or to care for those dependent on their leadership."

A fraternity rush group of yore could not have put the case for discriminatory exclusion of bright and ambitious students more candidly, though they might have been ashamed to put it in writing, or demand that it be codified as college policy. In another respect Friedenberg in fact would go further than the Greek-key anti-intellectuals dared. He would have colleges so devise admissions systems and testing as to exclude persons deemed psychic or motivational deviants. "A liberal and permissive school ought," he writes, "to be able to defend itself against the influx of punitive, authoritarian, or extremely passive-dependent people," though it should not "exclude any social class or ethnic group *as such*" (italics mine). "The psychological instrument, so long as it is permitted to retain its natural cultural contamination, should be quite sufficient." One wonders what Friedenberg would recommend as instruments for authoritarian, nonpermissive schools.

In any event, returning to the main point, Friedenberg is consistent with the radical counter-culture even though that culture is secessionist with respect to American institutions and he is content to work within our institutions: "Informal institutional demands of the schools are usually explicitly dehumanizing. . . . [T]he best protection for the civil liberties of students is to be found in distinguishing sharply between society's right to demand certain skills . . . and its practice of requiring that these be exhibited as aspects of a pedantic and constricted pattern of tastes."[2]

Ideas must fight a grinding battle with circumstance. The idea of merit and that of the natural aristocracy currently are challenged not only by secessionists and those within institutions who are under their influence, but also by many who would like either to save or to improve the quality of society. In her recent book *On Violence*, Hannah Arendt has revived interest in the dangers of meritocracy—a problem raised over ten years ago by Michael Young. "What grounds are there," Miss Arendt asks, "for supposing that the resentment against a meritocracy, whose rule is exclusively based on 'natural' gifts, that is, on brain power, will be no more dangerous, no more violent than the resentment of earlier oppressed groups who at least had the consolation that their condition was caused by no 'fault' of their own?"

While it is hard to reply to a rhetorical question, I think it possible to detect a certain narcissism and at the same time a certain self-flagellation at work among those intellectuals who equate merit with superior brain power like their own. The domain of merit is not exclusively that of the highest mental achievers, nor is it exclusively confined to qualities of mind. Dictionaries say that merit signifies reward (or punishment) due; qualities or actions constituting the basis of one's deserts; character or conduct deserving reward, honor, or esteem. In addition, our commonsensical view of it combines the notion that effort plus better performance represent good grounds for reward and advancement; and that it is possible to employ objective criteria of various sorts which, however crude, will enable us to make such distinctions reasonably fairly.

This has nothing special to do with the *layering* of society. Any occupation or profession, however inefficient or corrupt, at least must make a pretense of equitably rewarding, honoring, and advancing its members on some grounds other than caprice, favoritism, lottery, or automatic tenure principles; for were it otherwise, it is hard to imagine how it could even claim to be just or fair in its practices, or exempt from harsh complaints from victims of its shoddy practices. Indeed, it is hard to imagine that the merit principle was wholly absent in static, traditionalist status societies.

Finally, I think Jefferson to have been essentially correct when he stressed the need to "diffuse" knowledge. It could hardly be said that the logical consequence of this would be to construct a new status-pyramid of excellence, to replace the status pyramid of a pseudo-aristocracy of prescriptive rights. The diffusion of talents throughout society, already observed in Tocqueville's time, guaranteed checks against this.

Still, there are important truths in some critiques of the merit system as we have recently used it. There is good reason to suppose that some standardized tests, taken too seriously or too often employed, can stultify authentic creativity or create the impression that achievement is simply the act of test-passing. Evaluation can become an end in itself; it may favor test drudges; standards may invidiously contain cultural values irrelevant to the skill being tested; psychic injury may result from the anxieties entailed in anticipating or taking tests. To modify a proverb of the late Dean Acheson, a farmer does not pull up his carrots every night to see how they are growing, nor would a carrot benefit from such benign surveillance. Tocqueville long ago pointed to one unintended byproduct of a social system which abandons prescriptive rights for rights of achievement: namely, the constant uncertainty as to where one stood, and the anxious need constantly to reaffirm one's competence in order to reaffirm one's tenuous status. And then there is also the moral effect of replacing prescriptive aristocracy with performance democracy, which is to elevate the principle of interest over that of duty.

---

[2] *Report of the Commission on Tests*, College Entrance Board, Briefs (1970), pp. 34–6.

Yet none of these special arguments against the practice of merit and equal opportunity denies the principle. Rather, they expose its imperfections, and some suggest ways of dealing with the defects. This is not, however, the case with the principle of equality of results, which does thrust at the heart of the principle of equal opportunity and merit. To that challenge I now turn.

A commendable but innocent habit of some optimists, until recently at least, has been to assume that in the land of opportunity the just society and the meritocratic society would be one and the same. Now we are abundantly told otherwise. It is not simply, of course, that in the real world equal justice is never wholly consummated, nor that it is a foolish aspiration. (Paul Valery once wrote that if all men were equally enlightened, equally critical, and equally courageous, no society would be possible.) The problem is that the ideal of equal opportunity has some harsh impediments (some of which can be eliminated) to its attainment in the real world, while the closer we come to its attainment, the more we become aware of disparities of result. Some of these disparities in fact become more starkly visible the fairer the procedures employed; and some show up more visibly in certain sociological categories and groups than in others. Equality of opportunity sets the fair rules of the running; but the new ethic of equality of results would investigate the winning, on behalf of disadvantaged constituencies.

It is clear that the ideal of merit, like justice, should be blind to irrelevant distractions. But it may be that its companion ideal of equal opportunity can never be wholly free from discriminatory impediments. In America, very real, though often concealed, barriers to access have always existed. Jefferson had slaves, and Abraham Lincoln had a wife who could not vote, much less run for office. Certain minority groups have either been denied access to employment, or rendered incapable of benefiting from jobs or training because of past social evils. All this suggests the need for redress, if not retribution.

Yet even in the fairest of all procedures, where arbitrariness has been banished, and where steps have been taken to overcome the effects of inherited disadvantage of every kind, equal opportunity to all too often fail to produce the equality of results which some would wish. The consequence is that those who value equality of results over equal opportunity, and over the principle that all men should be judged and treated according to their individual merits, are attempting to lead us into a new era of discrimination on the basis of race, creed, and color.

Is discrimination as objectionable when pressed on behalf of previously disadvantaged minority groups as when pressed on behalf of advantaged ones? There is now, as well we know, a strong push for proportionality of group representation not simply in schools and universities, but in the professions, business, and industry.[3] The principal device is the quota, although the new discrimination can operate without specific quotas as well. Beaumarchais's point in *The Marriage of Figaro* was that exclusionary practices in 18-century aristocratic France were repugnant precisely because they had nothing to do with a person's individual qualities and skills, but everything to do with his arbitrarily assigned status. Is the situation any different where reverse discrimination is concerned? The gravity of the current situation in America can be seen in the fact that what began several years ago as a method of alleviating the black man's condition has since spread like wildfire to other groups and categories—ethnic, sexual, or chronological— each claiming the right to preferential treatment. In India when a system of reverse discrimination was established, the stigmata of deprivation were mysteriously transformed into signs of grace. Much the same seems to be happening here as one group after another proclaims its handicaps and oppressions in the hope of becoming eligible for compensatory advantages.

There are those who advocate reverse discrimination as a temporary measure, but as the experience of India has also shown, the beneficiaries of quotas or other forms of preferential treatment come to look upon them as prescriptive rights. Quotas, once established as institutional practice, prove as vigorously able to perpetuate themselves to do Texas oil-depletion allowances, and for the very same reason.[4]

---

[3] See Elliott Abrams, "The Quota Commission," Commentary, October 1972.

Race, sex, and age: these are our most elementary human attributes, in the possession of which we have absolutely no choice. We have them regardless of wheat we seek to become, or what we actually become. They are qualities with which we commence and end life. But with respect to what as individuals we may hope to gain from or contribute to a common culture, they have very little to say. One does not aspire to be a male or middle-aged or old. These are facts of existence. To imagine that one can or should realize or establish one's identity upon them is to debase one's humanity, which consists in possibilities. Yet in the strange winds of American change, these categories are now to be seen emblazoned on the gonfalons of reform and liberation. In the current view, equal opportunity can only be deemed truly equal if in its results it places a proportional representation of each biological category in the positions of effective status within every major institution.

As observers of the Indian scene noted decades ago, the quest for equality of results does no justice to criteria of excellence; what is less noticed is that it does no justice to authentic human need either. In the current affirmative-action crusade in America, one wonders whatever happened, for example, to the poor. A logician unfamiliar with the nuances of the American cultural revolution but knowledgeable about the vagaries of human statistical classification systems might well note the obvious difficulty which the poor as such have in becoming eligible for affirmative-action handouts.

For while the proportion of poor blacks to blacks-as-a-whole clearly is greater than the proportion of poor whites to whites-as-a-whole, the total number of poor whites is considerably greater than the total number of poor blacks. Yet under the categories of the disadvantaged on which affirmative-action programs are based, the only poor people eligible for reverse discrimination are those fortunate, or unfortunate, enough to be both poor *and* disadvantaged. (Many in the disadvantaged categories, needless to say, have never known poverty.)

Were the American reformist assault on the merit system simply expedited by means of formal quotas, and their twin sister, goals, the condition would at least have the unusual advantage of being open and above-board: one would know what was going on by reading the vast computer print-outs which, presumably, the authorities would collect and disseminate. (By way of contrast, in the old bad days of bad quotas, the data most likely were banked in the back of a prudent Dean's mind; they certainly were not published in college catalogues.) But this is not the case today when quotas are supplemented and sometimes replaced by other devices. Examinations may be abolished; tests of skill eliminated or downgraded; IQ tests eliminated—the argument being that if the tests do not produce the required sociological results they are defective and should go. In my home city, Berkeley, affirmative-action programs now call for precisely such abandonment of certifications. One proposal goes so far as to advocate that previous felony convictions not be considered in the employment of civil servants. Why, one wonders, do we not simply have recourse to a lottery? It may not be meritorious but at least, like justice, it is blind.

It was said of the American spoils system, which had its own informal rules of favoritism before testing came in (i.e., party loyalty and patronage), that the influence of its example corrupted the whole body politic. But that system was at least not codified or *required* by law. The patently discriminatory implications of affirmative action, however, have all the force of law behind them and are likely to be all the more corrupting both to the body politic and to the life of the society in general. For a complex society like our own, after all, depends on the skills of the individuals composing it. Concerns of human safety, convenience, and the quality of our collective life are of as great consequence as our concern for equal protection of the laws. We *do* want a qualified surgeon when we need an operation. We assume a skilled pilot, especially when it is we who are on the plane. We want a clever lawyer when we are in trouble. We want the telephone to work, and our mail to come to us, and to someone down the street. We want competent teachers for our children. In universities we want high standards of scholarship and research and we want them visible also as exemplars of excellence. In short, we want the entire complex of amenities and necessities in a condition which we can reasonably trust.

---

[4] I am indebted to Professor Donald E. Smith's important study, *India as a Secular State*, for his account and analysis of this sad experiment, which bears many drab parallels to the current American situation. It is somewhat out of date, however, in its remarks about the relevance of the Indian situation to possible American developments. Smith wrote, in 1963, that in the United States it would be regarded as "patently unfair" to favor race groups with state aid. "[S]ome Negroes are professional people with high incomes, and there are many white tenant farmers . . . whose standard of living is not much above that of bare subsistence. But apart from the unfairness of such a system, it would meet with strong objections from the Negro community itself, which would resent the official label of social or economic backwardness."

Our existence places us at the mercy of persons, often invisible to us, who are certified for their qualities. While we may argue about the manner in which, in real life, skill and competence are elicited and ascertained, we can hardly argue that there are no such things as skill and competence or that there is no way of measuring them. But there are those among us who do make this argument and those who also accept it, and its spreading influence may well constitute the single greatest threat to the quality of our lives today.

HEW AND THE UNIVERSITIES

(By Paul Seabury)[1]

Old Howard Smith, Virginia swamp fox of the House Rules Committee, was a clever tactical fighter. When Dixiecrats in 1964 unsuccessfully tried to obstruct passage of the Civil Rights bill, Smith in a fit of inspired raillery devised a perverse stratagem. He proposed an amendment to the bill, to include women as an object of federal protection in employment, by adding sex to the other criteria or race, color, national origin, and religion as illegitimate grounds for discrimination in hiring. This tactical maneuver had far-reaching effects; calculated to rouse at least some Northern masculine ire against the whole bill, it backfired by eliciting a chivalrous rather than (as we now call it) sexist response: the amendment actually passed!

Smith, however, had greater things in mind for women's rights. As a fall-back strategy, they would distract federal bureaucrats from the principal object of the bill, namely, to rectify employment inequities for Negroes. In this, at least in higher education, Smith's stratagem is paying off according to expectations. The middle-range bureaucrats staffing the HEW Civil Rights office, under its Director, J. Stanley Pottinger, now scent sexism more easily than racism in the crusade to purify university hiring practices. Minority-group spokesmen grumble when this powerful feminine competitor appears, to horn in. In the dynamics of competition between race and sex for scarce places on university faculties, a new hidden crisis of higher education is brewing. As universities climb out of the rubble of campus disorders of the 1960's beset by harsh budgetary reverses, they now are required to redress national social injustices within their walls at their own expense. Compliance with demands from the federal government to do this would compel a stark remodeling of their criteria of recruitment, their ethos of professionalism, and their standards of excellence. Refusal to comply satisfactorily would risk their destruction.

The story of how this came about, and what it portends, is a complex one, so complex that it is hard to know where to begin. It is also an unpleasant tale. Only its first chapters can be written.

I

Let us begin the story, then, with a brief history of the Civil Rights Act of 1964. This act, in the view of its principal sponsors, purposed (among other things) to engage the force of the federal government in battle to diminish or to rectify discriminatory hiring practices in firms and institutions having or seeking contracts with the federal government. Title VII of the act expressly forbids discrimination by employers on grounds of race, color, religion, and national origin, either in the form of preferential hiring or advancement, or in the form of differential compensation. Contracting institutions deemed negligent in complying with these provisions could be deemed ineligible for such contracts, or their contracts could be suspended, terminated, or not renewed.

When Title VII was debated in the Senate, some opponents of it, asserting (in the words of a Washington *Star* editorial) that it was a "draftsman's nightmare," voiced alarm that it might be used for discriminatory purposes, and employers might be coerced into hiring practices which might, in fact, violate the equal-protection poctrine of the Constitution, thus perversely reversing the stated purposes of the bill. In one significant interchange, this alarm, raised by Florida's Senator Smathers, was genially dismissed by Senator Humphrey, in words which bear recalling:

---

[1] Paul Seabury is professor of political science at the University of California at Berkeley and the author of, most recently, *The Rise and Decline of the Cold War.*

> Mr. HUMPHREY. [T]he Senator from Florida is so convincing that when he speaks, as he does, with the ring of sincerity in his voice and heart, and says that an employee should be hired on the basis of his ability—
>
> Mr. SMATHERS. Correct.
>
> Mr. HUMPHREY. And that an employer should not be denied the right to hire on the basis of ability and should not take into consideration race—how right the Senator is. . . .
>
> But the trouble is that these idealistic pleadings are not followed by some sinful mortals. There are some who do not hire solely on the basis of ability. Doors are closed; positions are closed; unions are closed to people of color. That situation does not help America. . . .
>
> I know that the Senator from Florida desires to help America, industry and enterprise. We ought to adopt the Smathers doctrine, which is contained in Title VII. I never realized that I would hear such an appropriate description of the philosophy behind Title VII as I have heard today.
>
> Mr. SMATHERS. Mr. President, the Senator from Minnesota has expressed my doctrine completely. . . .

The first steps in implementing the new act were based on executive orders of the President corresponding to Humphrey's Smathers Doctrine. President Johnson's Executive Order No. 11375 (1967) stated that

> The contractor will not discriminate against any employee or applicant because of race, color, religion, sex, or national origin. The contractor *will take affirmative action* [italics added] to ensure that employees are treated during employment, without regard to their race, color, religion, sex, or national origin,

Under such plausible auspices, "affirmative action" was born, and with a huge federal endowment to guarantee its success in life. Since 1967, however, this child prodigy—like Charles Addams's famous nursery boy with the test tubes—has been experimenting with novel brews, so as to change both his appearance and his behavior. And it is curious to see how the singleminded pursuers of an ideal of equity can overrun and trample the ideal itself, while injuring innocent bystanders as well.

II

Affirmative action was altered by a Labor Department order (based not on the Civil Rights Act but on revised Presidential directives) only months after the Johnson order was announced. This order reshaped it into a weapon for discriminatory hiring practices. If the reader will bear with a further recitation of federal prose, let me introduce Order No. 4, Department of Labor:

> An affirmative-action program is a set of specific and result-oriented procedures to which a contractor commits himself to apply every good faith effort. The objective of these procedures plus such efforts is equal employment opportunity. Procedures without effort to make them work are meaningless; and effort, undirected by specific and meaningful procedures, is inadequate. An acceptable affirmative-action program must include an analysis of areas within which the contractor is deficient in the utilization of minority groups and women, and further, *goals and timetables to which the contractor's good faith efforts must be directed to correct the deficiencies and thus, to increase materially the utilization of minorities and women, at all levels and in all segments of his work force where deficiencies exist.*

This directive is now applicable through HEW enforcement procedures to universities by delegation of authority from the Labor Department. By late 1971, something of a brushfire, fanned by hard-working HEW compliance officers, had spread through American higher education, the cause of it being the demand that universities, as a condition of obtaining or retaining their federal contracts, establish hiring goals based upon race and sex.

III

Universities, for a variety of singular reasons, are extremely vulnerable to this novel attack. As President McGill of Columbia remarked recently, "We are no longer in all respects an independent private university." As early as 1967, the federal government was annually disbursing contract funds to universities at the rate of three-and-a-half billion dollars a year; recently the Carnegie Commission suggested that federal contract funding be increased by 1978 to thirteen billion dollars, if universities are to meet their educational objectives. Individual institutions, notably great and distinguished ones, already are extraordinarily dependent on continuing receipt of federal support. The University of California, for instance, currently (1970–71) depends upon federal contract funds for approximately $72 million. The University of Michigan, periodically harassed by HEW threats of contract suspension, cancellation, or nonrenewal would stand to lose as much as $60 million per annum. The threat of permanent disqualification, if consummated, could wholly wreck a university's prospects for the future.

In November 1971, HEW's Office for Civil Rights announced its intent to institute proceedings for Columbia's permanent debarment—*even though no charges or findings of discrimination had been made*: Columbia had simply not come up with an acceptable affirmative-action program to redress inequities which had not even been found to exist. When minor officials act like Alice in Wonderland's Red Queen, using threats of decapitation for frivolous purposes; when they act as investigator, prosecutor, and judge rolled into one, there may be no cause for surprise. But one can certainly wonder how even they would dare pronounce sentence—and a sentence of death at that—even before completion of the investigatory phase. Such, however, appears to be the deadly logic of HEW procedures. As J. Stanley Pottinger, chief of HEW's office, said at a West Coast press conference recently, "We have a whale of a lot of power and we're prepared to use it if necessary." In known circumstances of its recent use, the threat resembles the deployment of MIRV missiles to apprehend a suspected embezzler.

IV

As the federal government of the United States moves uncertainly to establish equitable racial patterns in universities and colleges, it does so with few guidelines from historical experience. The management, manipulation, and evaluation of quotas, targets, and goals for preferential hiring are certainly matters as complex as are the unusual politics which such announced policies inspire. How equitably to assuage the many group claimants for preference, context-by-context, occasion-by-occasion, and year-by-year, as these press and jostle among themselves for prior attention in preference, must by now occasion some puzzlement even among HEW bureaucrats. On a recent Inspector General's tour of California, J. Stanley Pottinger found himself giving comfort to militant women at Boalt Hall Law School of the University of California; yet at Hayward State College, he was attacked by Chicanos for giving preference to blacks! Leaders of militant groups, needless to say, are less interested in the acute dilemmas posed to administrators by this adventure than in what they actually want for themselves. (When at Michigan I raised with a Women's Commission lady the question of whether an actual conflict-of-interest might exist between blacks and women, she simply dismissed the matter: that's for an administrator to figure out.) How to arrive at some distant utopian day, when "underutilization" of minorities or women has "disappeared," is as difficult to imagine as the nature of the ratios that will apply on that day.[2]

V

Fifteen years ago, David Riesman in his *Constraint and Variety in American Education* pointed to certain qualities which distinctively characterzed avant-garde institutions of higher learning in this country. The world of scholarship, he said, "is democratic rather than aristocratic in tone, and scholars are made, not born." A "certain universalizing quality in academic life" resulted from the existence of disciplines which "can lift us out of our attachments to home and mother, to our undergraduate alma mater, too, and attach us instead to the new country of Biophysics or the old of Medieval History." In America, the relative decline of ethnic and social-class snobberies and discrimination, combined with immense expansion of the colleges, drew into scholarship a great majority whose backgrounds were distinctly unscholarly. "The advancing inner frontier of science," he wrote, had for many taken the place which the Western frontier served for earlier pioneers. The loyalty which the new democratic scholar showed to his discipline signalled a kind of "non-territorial nationalism." In contrast to his European counterparts, the American scholar found few colleagues among the mass of undergraduates on the basis either of "a common culture or a common ideology in the political or eschatological sense." Paradoxically this democratization of the university (with its stress not on status but upon excellence in performance) had not begun in rank-and-file small colleges of the nation, which were examplars of America's ethnic, religious, and cultural diversity. Rather it had come out of those innovating institutions which, in quest of excellence, either abandoned or transcended much of their discriminatory sociological parochialism. It was the denominational college, where deliberate discrimination according to sex, religion, color, and culture continued to be practiced in admissions and faculty recruitment, which made up the rear of the snake-like academic procession. The egalitarianism of excellence, a democracy of performance, was an ethos consummated by the avant-garde. Riesman labelled the disciplines of the great universities the "race-courses of the mind."

---

[2] When I asked an administrator at San Francisco State College what "underutilization" of minorities meant, he simply replied, "Experience will let us know."

Felix Frankfurter, who went from CCNY to Harvard Law School, was equally impressed with how the system worked. "What mattered," he wrote, "was excellence in your profession to which your father or your face was equally irrelevant. And so rich man, poor man were just irrelevant titles to the equation of human relations. The thing that mattered was what you did professionally. . . ." As he saw the merit system, the alternative to it had to be "personal likes and dislikes, or class, or color, or religious partialities or antipathies. . . . These incommensurable things give too much room for personal preferences and on the whole make room for unworthy and irrelevant biases."

The greatest boost to America's universities came in the 1930's from European emigré scholars whose powerful influence (notable in the sciences and social sciences) is still felt even today. As exemplars of learning, their impact upon young and parochial American students was profound.[8] Thanks in part to them, by the 1950's the great American universities attained an authentic cosmopolitanism of scholarship matched by no other university system in the world. And the outward reach of American higher education toward the best the world of scholarship could offer generated an inward magnetism, attracting to itself the most qualified students who could be found to study with these newly renowned faculties.

This system of recruitment also left a myriad of American sociological categories statistically underrepresented in the highest precincts of American higher education. Today, with respect to race and ethnicity, blacks, Irish, Italians, Greeks, Poles, and all other Slavic groups (including Slovaks, Slovenes, Serbs, Czechs, and Croatians) are underrepresented. On faculties, at least, women are underrepresented. Important religious categories are underrepresented. The great Catholic universities, until recently, have stood aside from the mainstream of secular higher education; they have been enclaves of a separated scholarship. Thus few Catholics are to be found in the roster of distinguished faculties of America's great secular universities, even though Catholics comprise perhaps 30 percent of the population. And it is interesting to note that the quest for professional excellence in some respects has militated against the achievement of group parities: among those women's colleges which had obtained by the 1950's an enviable academic status as being more than *apartheid* seminaries, one apparent "price" or scholarly excellence was the rapid infusion of male faculty.

And then, on the other hand, there are the Jews. For a long time, administrators of some of America's universities, aware of the powerful scholarly competition which Jewish students and scholars posed, and the social "inequities" which their admission or recruitment might pose, established protective quotas—the famous *numerus clausus*—to keep their numbers down. Yale Law School, for example, abandoned its Jewish quota for incoming students only in the 1950's. With the triumph of equal opportunity over quotas, the bastions of discrimination collapsed. It is estimated that Jews make up about 3 percent of the population. Clearly they constitute a vastly greater proportion than that on the faculties of America's greatest universities, especially in the social sciences, mathematics, and the humanities.

---

[8] It is now sometimes said, on behalf of preferential recruitment of less-qualified minority faculty, that minority students require *examples* whom "their community" can respect. Whether in practice this would, as claimed, stimulate their performance, is hard to say. The most stimulating exemplary professors I encountered as a student had quite different "socio-economic" backgrounds from mine. Many were even foreigners. It seems almost foolish to have to mention this.

One could enlarge this catalogue of statistical disparities indefinitely. Yet I must also mention the political, although it is seldom touched upon. The partisan complexion of universities is a matter which HEW does not, and cannot, attend to. Still, I would point out that the faculty of my department at Berkeley, for example, very large by any standards, had to the best of my knowledge three Republicans on it a few years ago; two have since left, one by retirement and one by resignation. There is one new convert, who switched registration to vote for Senator Kuchel in the GOP primary and against Max Rafferty and found, after conversion, that he enjoyed the notoriety which his deviance produced. So, currently we have two Republicans in a department of thirty-eight. This situation is in no way unique. Yet I doubt that even Nixon's HEW crusaders for equality of results would tread into this minefield of blatant inequity. On the other hand, one wonders whether, in White House garrets, there are not some among the President's Republican equerry who take perverse pleasure in watching academic liberals, crusaders for social justice for others, now hoist by their own petard on home territory.

VI

The ironic potentials in affirmative action might have been foreseen had American lawmakers and administrators known the results which in recent years have plagued the government of India's pursuit of a quite similar goal. Here, perhaps more clearly than in any other contemporary culture, the idea that social justice can be reached via quotas and preferences has led almost inexorably to extremes of absurdity.

Before independence, under British rule, special privileges to communities and castes were given or withheld under the British *raj* both to rectify inequities and (as in the instance of the Muslims) to punish disloyalty or reward support. Commencing in legislatures as the establishment of reserved seats for privileged groups—first for Muslims, then for Anglo-Indians, then for Indian Christians—the principle of privileged representation soon spread into other sectors of public life.

When in the early 1930's B. R. Ambedkar, leader of the Untouchables, demanded that the British establish preferential electoral quotas for them, Gandhi objected, arguing that the interests of the Untouchables would better be advanced by integrating them into society than by protecting them with preferential treatment. Gandhi believed that preference would heighten identity of caste rather than diminsh it, and that it further risked creating vested-interest minorities. Yet in negotiations with the British, Ambedkar won and Gandhi lost. After independence, the government of India backtracked, abolishing preferential treatment for all groups except tribal peoples and scheduled castes (i.e., Untouchables) who were accorded certain preferences in government recruitment and in access to educational institutions, fellowships, and admissions. Such preferences, originally instituted as temporary devices, soon became institutionalized, and again they spread. So-called "backward classes" proliferated to the point where it became necessary to be designated as "backward" in order to become privileged. And, indeed, in 1964, a "Backwardness Commission" recommended in the state of Mysore that every group except two (the Brahmins and the Lingayats) be officially designated as backward!

The Indian experience clearly shows that when access to privilege is defined on ethnic-community lines, the basic issue of individual rights is evaded; new privileges arise; caste privilege sabotages the principle of equality; the polity further fragments; and the test of performance is replaced by the test of previous status. (In Kanpur, recently, the son of a wealthy Jat family applied for admission to the Indian Institute of Technology and was rejected on objective criteria; then he reapplied as a member of an ethnically-schedled caste, and on this basis was admitted.)

VII

To remain eligible for federal contracts under the new procedures, universities must devise package proposals, containing stated targets for preferential hiring on grounds of race and sex. HEW may reject these goals, giving the university thirty-day notice for swift rectification, even though no charges of discrimination have been brought. Innocence must either be quickly proved, or acceptable means of rectification devised. But how does one *prove* innocence?

"Hiring practices" (i.e., faculty recruitment procedures) are decentralized; they devolve chiefly upon departments. At Columbia, for instance, 77 units generate proposals for recruitment. Faculties resent (most of the time quite properly) attempts of administrators to tell them whom to hire, and whom not. Departments rarely keep records of the communications and transactions which precede the making of an employment offer, except as these records pertain to the individual finally selected. Still, the procedure is time-consuming and expensive. The Department of Economics of the San Diego campus of the University of California estimates that it costs twenty to forty man hours, plus three to five hundred dollars to screen *one* candidate sufficiently to make an offer. Typically, dozens of candidates are reviewed in earlier stages.

Compliance data thus tend to be scanty and incomplete. "Columbia's problem," President McGill recently observed, "is that it is difficult to prove what we do because it is exceedingly difficult to develop that data base on which to show, in the depth and detail demanded [by HEW], what the University's personnel activities in fact are." Yet HEW demands such data from universities on thirty-day deadlines, with contract suspension threatened. Moreover, on its finding of discrimination (usually based on statistical, not qualitative, evidence), it may demand plans for rectification which oblige the university to commit itself to abstract preferential goals without regard to the issue of individual merit.

The best universities, which also happen to be those upon which HEW has chiefly worked its knout, habitually and commonsensically recruit from other best institutions. The top universities hire the top 5 percent of graduate students in the top ten universities. This is the "skill pool" they rely upon. Some may now deem such practices archaic but they have definitely served to maintain quality. Just as definitely they have not served to obtain "equality of results" in terms of the proportional representation of sociological categories. Such equality assumes that faculties somehow must "represent" designated categories of people on grounds other than those of professional qualification. As Labor Department Order No. 4 states, special attention "should be given to academic, experiece and skill requirements, to ensure that the requirements in themselves do not constitute inadvertent discrimination." Indeed, according to four professors at Cornell writing in the Times (Letters to the Editor, January 6), deans and department chairmen have been informed by that university's president that HEW policy means the " 'hiring of additional minority persons and females' even if 'in many instances it may be necessary to hire unqualified or marginally qualified people.' "

If departments abandon the practice of looking to the best pools from which they can hope to draw, then quality must in fact be jeopardized. To comply with HEW orders, every department must come up not with the *best* candidate, but with the best qualified *woman* or *non-white* candidate. For when a male or a white candidate is actually selected or recommended, it is now incumbent on both department and university to *prove* that no qualified woman or non-white was found available. Some universities already have gone so far in emulating the federal bureaucracy as to have installed their own bureaucratic monitors, in the form of affirmative-action coordinators, to screen recommendations for faculty appointments before final action is taken.

A striking contradiction exists between HEW's insistence that faculties prove they do not discriminate and its demand for goals and timetables which require discrimination to occur. For there is no reason to suppose that equitable processes in individual cases will automatically produce results which are set in the timetables and statistical goals universities are now required to develop. If all that HEW wishes is evidence that universities are bending over backward to be fair, why should it require them to have statistical goals at all? Do they know something no one else knows, about where fairness inevitably leads?

Yet another facet of HEW's procedures goes to the very heart of faculty due process: its demand of the right of access to faculty files, when searching for evidence of discrimination. Such files have always been the most sacrosanct documents of academia, and for good reason: it has been assumed that candor in the evaluation of candidates and personnel is best guaranteed by confidentiality of comment; and that evasiveness, caution, smoke-screening, and grandstanding—which would be the principal consequences of open files—would debase standards of judgment. In the past, universities have denied federal authorities—the FBI for instance—access to these files. Now HEW demands access. And it is the recent reluctance of the Berkeley campus of the University of California to render unto this agent of Caesar what was denied to previous agents, which occasioned the HEW ultimatum of possible contract suspension: $72 million. One might imagine the faculty would be in an uproar, what with Nixon's men ransacking the inner temple. But no. In this as in other aspects of this curious story, the faculty is silent.

VIII

"In respect of civil rights, common to all citizens, the Constitution of the United States does not, I think, permit any public authority to know the race of those entitled to be protected in the enjoyment of such rights. . . . Our Constitution is color-blind, and neither knows nor tolerates classes among citizens." This is Justice Harlan, dissenting in *Plessy* v. *Ferguson* in 1896, when the Supreme Court endorsed the "separate but equal" doctrine.

Some of us in the league of lost liberals are still wont to say that the Constitution is color-blind. Yet now under the watchful eye of federal functionaries, academic administrators are compelled to be as acutely sensitive as Kodachrome to the outward physical appearance of their faculty members and of proposed candidates for employment. Forms supplying such information are now fed into data-processing machines; print-outs supply ethnic profiles of departments, colleges, and schools, from which compliance reports may be sent to HEW, and university affirmative-action goals are approved or rejected.[4]

All of this is done in some uneasiness of mind, to put it mildly. In many states, Harlan-like blue-laws of a recent innocent epoch still expressly prohibit employers from collecting and maintaining data on prospective employees with respect to race, religion, and national origin. The crafty practices contrived to elude the intention of such laws while at the same time complying with HEW, vary from campus to campus. At the University of Michigan, the procedure entails what is known as "self-designation"—the employee indicates on a form the race or ethnic group of which he considers himself a part.[5] These forms are collected and grouped according to job-classifications, departments, etc., and then they are burned, so as to disappear without a trace. Other universities, less anxious to cover their traces, simply file the forms separately from regular personnel files, without the names of the individuals concerned. In New York, the CUNY system resorts to a quite different practice invented and perfected by South African Boers: "visual identification." Affirmative-action coordinators are told to proceed as follows: "The affirmative-action inventory is to be done by a *visual* survey [italics in original]. There *should not be a notation of any kind* as to ethnic background in either personnel records or permanent files. This is against the law. . . . Identification of Italian Americans will be done visually and by name. . . . Please remember, however, that each individual is to be listed in only one ethnic group."

The number of categories established on behalf of affirmative action, though at present finite, already betrays accordion-like expansibility. The affirmative-action program at San Francisco State College, typical of most, is now confined to six racial groups: Negroes; Orientals; other Non-White; persons of Mexican, Central or South American ancestry ("except those who have physical characteristics of Negro, Oriental, or other Non-White races"); Native American (American Indian); and All Others, ". . . including those commonly designated as Caucasian or White." All but the last category are eligible for discriminatory preference.[6]

As the above CUNY memorandum signals, however, this last category of "those commonly designated as Caucasian or White" is a Pandora's box inside a Pandora's box. Now that the Italians have escaped from it in New York, the lid is open for others—all the many different groups now fashionably known as "ethnics"—to do likewise. A far-seeing administrator, even as under HEW's gun he hastily devises future-oriented hiring quotas ("goals") to muffle the noise of one or two squeaky wheels, might wonder how he will be able to gratify subsequent claimants on the dwindling capital of reserved quotas still at his disposal.

Yet the administrator in practice has no choice but to act on the "sufficient unto the day is the evil thereof" principle. HEW ultimata, when they come, are imperious and immediate. Thirty-day rectifications are in order. At Johns Hopkins, MIT, Columbia, Michigan, and the University of California, an acute agony arises from no such philosophical long-range speculations, but from how to put together attractive compliance reports fast enough to avoid the threatened withholding of vast funds, the closing-down of whole facilities, the dismissal of thousands of staff workers, and the irreparable damage done to important ongoing research, epsecially to laboratory experiments. Crocodile tears do flow, from the gimlet-eyes of HEW investigators, who observe these sufferings from distant federal offices. Even J. Stanley Pottinger recently noted, in appropriate Pentagonese, that the act of contract suspension at Berkeley, for instance, might constitute "overkill." Yet no sooner had he voiced this note of sadness than his regional compliance director recommended to Washington precisely such action.

---

[4] Since HEW has divulged no reliable standards of its own, the well-intentioned administrator is like a worshiper of Baal, propitiating a god who may punish or reward, but who is silent.

[5] Self-designation is not always reliable. At Michigan the amused or disgusted members of one of the university's maintenance crews all self-designated themselves as American Indians (bureaucratese: Native American); their supervisor was quietly asked to redesignate them accurately.

[6] One object of current discriminatory hiring practices at San Francisco State is to make the institution's nonacademic personnel ethnically mirror the population of the Bay Area.

IX

While deans, chancellors, and personnel officials struggle with these momentous matters, faculties and gradute students with few exceptions are silent. HEW is acting in the name of social justice. Who in the prevailing campus atmosphere would openly challenge anything done in that name? Tenured faculty perhaps consult their private interests and conclude that whatever damage the storm may do to less-protected colleagues or to their job-seeking students, prudence suggests a posture of silence. Others perhaps, refusing to admit that contending interests are involved, believe that affirmative action is cost-free, and that all will benefit from it in the Keynesian long run. But someone *will* pay: namely very large numbers of white males who are among those distinguishable as "best qualified" and who will be shunted aside in the frantic quest for "disadvantaged qualifiables."

The inequities implied in affirmative action, and the concealed but real costs to individuals, would probably have had less damaging effects upon such highly-skilled graduate students had they been imposed in the early 1960's. Then, the sky was the limit on the growth and the affluence of higher education. If a pie gets bigger, so may its slices enlarge; nobody *seems* to lose. Such is today not the case. The pie now shrinks. One West Coast state college for example, last year alone lost nearly 70 budgeted faculty positions due to financial stringency. Yet this same college has just announced the boldest affirmative-action program in California higher education. "Decided educational advantages can accrue to the college," it said, "by having its faculty as well as its student body be more representative of the minority population of the area. *It is therefore expected that a substantial majority of all new faculty appointments during the immediate academic years will be from minorities, including women, until the underutilization no longer exists.*" (Italics added.) Departments which refuse to play the game will have their budgets reviewed by university officials.

It is hard to say how widely such pernicious practices have been institutionalized in other colleges and universities. But were they to be generalized across the nation, one thing is certain: either large numbers of highly-qualified scholars will pay with their careers simply because they are male and white, *or*, affirmative action will have failed in its benevolent purposes.

X

It seems superfluous to end this chronicle of woe with mention of another heavy cost—one not so immediately visible—in the forceful administration of affirmative-action hiring goals. This is that men will be less able to know, much less sustain, the professional standards by which they and others judge and are judged. An enthusiastic affirmative-action administrator recently in argument with a skeptical college president said, "Let's face it—you and I know there are a lot of lousy programs and a lot of shoddiness around here. Why object to this?" By such logic, one bad turn deserves another. Since more and more less and less qualified students may enter universities, why bother too much about the quality of the new faculty hired to teach them? It is an interesting reflex habit of some federal bureaucrats and politicians (when confronted with objections that affirmative action might, for instance, discriminate against well- or better-qualified persons) to draw rhetorical analogies to confute their critics on this score. Told that affirmative action might actually discriminate against white males, J. Stanley Pottinger of HEW simply replied, "That is balderdash. That is the biggest crock I have ever heard. It is the kind of argument one expects to hear from a backwoods cracker farmer."

Indeed, backwoods cracker farmers *are* making this argument—though for reasons other than those Pottinger had in mind, and which have much to do with the things great universities require in order to survive in their greatness. Consider what a white third-year law student at a Southern university (self-designating himself disadvantaged but according to no currently approved norms) had to say with respect to his personal situation:

> The ability to think in the abstract is hard for a person with my cultural background and economic background. My parents were WASPS whose income barely exceeded the poverty level. My father is a Southern Baptist with a third-grade education. . . . My mother is a Southern Baptist also. . . . She can read and write but my father is illiterate.
>
> In the public schools I attended, memorization was always emphasized. At ——— University . . . during my first eight quarters at this law school no one has emphasized the ability to think in abstract terms. . . . I do not know if this type of education is good or bad, but I do know that all your time is spent taking notes and that there is no time for thought. . . . Regardless, the course has made me acutely aware of how fortunate I am to be an American. In no other country would I have been able to complete the requirements for a J.D. degree. My cultural and economic background would have prevented it. . . . My background also prevents me from answering a test like this in the manner you desire. But if I must answer, then I will. . . .
>
> There is another form of discrimination of which, I believe, I am a victim. As a non-member of a minority group I feel that I . . . [am] discriminated against constantly. The same admissions standards are not applied because a certain percentage of minority students must be admitted in each class regardless of their qualifications. My test score, undergraduate record, and my family (poor white) deny me admittance to Harvard because I am white. I do not say this in bitterness, but in observation of the current status of admission practices as I perceive them. . . .

Somebody, then, has to pay, when the principle of merit is compromised or replaced by preferential ethnic and sex criteria.

Who then wins? The beneficiaries of preference? The particular institution involved? Society as a whole? One may debate the answer to each of those questions, but one thing is certain: HEW wins. It wins, as Aaron Wildavsky has pointed out, because winning can be defined by internal norms. The box-score is of its own devising. To the extent that its goals are met, and the body-count proves this, it wins. But then, where have we heard *that* before?

UNIVERSITY OF CALIFORNIA, LOS ANGELES,
September 30, 1974.

Congressman JAMES G. O'HARA,
Chairman, Special Subcommittee on Education,
Committee on Education and Labor,
House of Representatives, Washington, D.C.

DEAR CONGRESSMAN O'HARA: Thank you for your invitation to submit written testimony to the Subcommittee in connection with the hearings on compliance with civil rights laws and institutional eligibility for federal funds.

The text and spirit of the civil rights laws clearly forbid discrimination against *individuals* by reason of their race or sex. But it is universal knowledge that the agencies responsible for the enforcement and implementation of those laws, primarily HEW in the case of education, have been demanding precisely such discrimination. The agencies do not seem to want to locate and remedy instances of present discrimination but rather to achieve *proportionate representation*—minimum targets or quotas—for certain (not all) groups who have been victims of discrimination in the past. "Group justice" has been substituted for individual justice, as if discriminaton against a white or a male today somehow makes up for discrimination against a black or a female in earlier years.

You will undoubtedly be receiving many fine letters analyzing the process whereby group justice, the quota system, has become institutionalized into the practices of the agencies; explaining how group justice is foreign to the letter and spirit of our laws, if it involves injury to and discrimination against individuals by reason of race or sex; and detailing the abuses that have coerced colleges and universities around the country into adopting systems of "reverse" or "benevolent" discrimination. I wish only to make a brief comment explaining how I became concerned with this issue.

For the academic year 1971–72, I was the Placement Officer of the UCLA Economics Department. My task was to assist recipients of graduate degrees in finding suitable employment—an issue of anxious concern to fine young men and women of many different ethnic groups who had invested years of their lives and made great financial sacrifices to attain high professional competence in their field, as evidenced by the award of graduate degrees. As far back as I have knowledge, it has always been the policy of our Department not to discriminate on the basis of race, sex, color or creed in its placement service.

I can still recall my astonishment as letters began to cross my desk: (1) making it clear that prospective employing colleges and universities intended to give preference to, or even sole consideration to, certain designated "minorities" (or to females). Furthermore, (2) I was asked as Placement Officer to classify our candidates by race and sex in order to facilitate this discrimination. Not only was the employer discriminating, but I was asked to participate in the process. Nor was this demand easy to refuse, since failure on my part to cooperate might well mean that *no* candidate from UCLA would receive consideration for employment.

I followed the general practice of writing a letter of remonstrance and complaint to the pospective employer in such circumstances. In one or two cases I received heart-warming assurance that there would in fact be no discrimination against candidates on grounds of race or sex. More frequently, my remonstrance was simply ignored—from which it is reasonable to infer that all our candidates, being racially "impure" (i.e., unclassified), were failing to receive fair consideration. But generally, I would receive an apologetic letter in reply, in which the employing department excused its action by citing the pressures placed upon it from above.

I gradually learned that the system generally worked as follows. HEW would place pressure on top levels of the institution to produce a plan containing race and sex employment "targets" or "goals" with "timetables". The institutions would then place pressure upon its component departments or hiring units to come up with a suitable "body count" in its employment decisions. Thus, the higher-level decisions forced discrimination—hiring or refusing to hire on grounds of race or sex—on the part of the lower-level hiring units. And, as I have already indicated, the hiring units were then impelled to demand race and sex classification of candidates, thus implicating placement officers in this web of illegal discrimination.

On the basis of this experience, I would like to make the following recommendations. (1) Government agencies should be *forbidden* to demand of any institution the adoption of an employment plan with numerical "targets" or "goals", as such a plan inevitably forces hiring units into a pattern of discrimination by quota. (2) No finding of discrimination should be made on the basis of merely statistical race or sex classification, without specific evidence of actual discrimination against individual persons. (3) Given a finding of discrimination, no "group justice" remedy should be adopted. Compensation must be to individual victims of past suffering, rather than taking the form of preference for non-victims who happen to share the same group attributes like skin color.

The main thrust of my suggestions is that harm is always to individuals, and compensation must be to individuals. Racism, even "benevolent" racism, is foreign to our laws; racial classification of individuals, and racial criteria for employment, have come about not by legislation but by bureaucratic implementation. The experience of other countries should alert us to the menace of this preoccupation with racial or other concepts of "group justice" over-riding individual rights and individual justice.

Sincerely,

JACK HIRSHLEIFER,
Professor, Department of Economics.

LEWIS AND CLARK COLLEGE,
Portland, Oreg., September 25, 1974.

Representative JAMES G. O'HARA,
House Office Building,
Washington, D.C.

DEAR REPRESENTATIVE O'HARA: Individually and collectively, the 15 members of the Oregon independent colleges have long been committed to the concept of non-discrimination and affirmative action. In fact, we were actively involved in such endeavors, both in regard to student recruitment as well as faculty and staff, long before the federal government became interested.

We cannot help being concerned, however, by some of the guidelines and requirements that are emanating at least from the Region X office of HEW. Although some of the activities of HEW have touched almost all of the institutions, we are especially concerned by the presently ongoing case of Reed College.

If there is any school anywhere in the northwest that has for its entire history practiced non-discrimination, it is certainly Reed. That is still the stance of the college, the president, the trustees, and all other persons in any position of responsibility. It is also true, however, that Reed College, like every other independent college in Oregon, is relatively small and in order to stay alive has made certain that their non-academic staff and expenditures are kept as small as possible.

All of us in the area of higher education in Oregon are concerned by the August 16 report from the Region X office of HEW to Reed College. Quite literally, it is physically and financially impossible for Reed, or any of our other colleges, to meet the paper work requirement demanded in this report. On page 7 of the report, for instance, they are demanding that Reed College supply "statistical data by department for faculty and job classification for staff showing the total number of applicants for the past year by race, sex, source of referral and disposition (including reasons for non-employment)".

In today's tight faculty market, any of our schools can reasonably expect to receive anywhere from 1,000 to 3,000 unsolicited applicants for employment in any year. To demand that some of our schools, which include total staff of no more than 10 or 15, produce the reports and analyses demanded by HEW is ludicrous at best. The president of Reed College informs me that it would demand at least the time of three full time staff people to handle the paper work required by this one report alone.

Let me repeat; everyone of Oregon's independent colleges wants to cooperate with the concept of non-discrimination and affirmative action, we are doing the best that we can, and we are constantly striving to do even better. We do protest, however, the unreasonable expectations and demands of Region X of HEW which seems to blithely assume that all of our institutions have the staff of either a major corporation or a multi-university.

All of us are certained that this sort of bureaucratic requirements and endless paper work was not the intention of Congress when they passed the law, nor of the national HEW when they promulgated the guidelines. We would appreciate whatever support you could give us in attempting to bring some sort of reality to this very important subject.

When you can see that the guidelines and requirements are a problem to a school the size of the University of Michigan, I am sure you can understand the impossibility of our meeting these unreasonable demands.

Thank you for your cooperation.

Sincerely yours,

JIM SULLIVAN, *Executive Director.*

CALIFORNIA STATE EMPLOYEES' ASSOCIATION,
Sacramento, Calif., October 2, 1974.

Hon. EDWARD R. ROYBAL,
The U.S. House of Representatives, Washington, D.C.

DEAR MR. ROYBAL: It has been brought to CSEA's attention that you have asked for a congressional investigation of charges that federal agencies have allowed the University of California at Berkeley to continue discriminatory hiring practices.

CSEA represents over 100,000 employees in three major jurisdictions, state civil service, California State University and Colleges, and the University of California.

In our dealings with the University of California, it is our opinion that UC Berkeley is *not* the only UC campus that has discriminatory hiring practices. As an example of this, enclosed you will find a report prepared by the Minority Affairs Committee at UC Irvine.

The majority of CSEA representatives, at all major UC locations, have complained about discriminatory hiring practices.

Individual grievances have been filed at certain UC campuses with little or no results.

Therefore, CSEA requests that the investigation be broadened to include all the major locations of the University, including UC hospitals and medical centers plus the two AEC laboratories at Berkeley and Livermore.

Any information regarding this matter can be directed to Walter Taylor, CSEA General Manager.

Sincerely,

JOHN B. MATHENY, *President.*

[Note: Enclosure appears in Part 2A, p. 266.]

EAST LANSING, MICH., *October 2, 1974.*

Representative JAMES G. O'HARA,
Special Subcommittee on Education,
Washington, D.C.

DEAR REPRESENTATIVE O'HARA: I have been told that your subcommittee has been holding hearings on the extent to which universities are to be held responsible for compliance with Federal anti-discrimination laws and guidelines. As a woman faculty member at a large state university, I urge you and the members of your committee to insist that university administrators comply with all aspects of the law. In the department where I work the salaries of a number of the women faculty are significantly lower than the salaries of men with the same responsibility and experience. This difference has been brought to the attention of the administrators and faculty committees that discuss salary, and no changes or satisfactory explanations have been given.

Two clippings from local newspapers on a university council that is supposed to deal with discrimination and women at the university, are attached. It is an understatement to say that this council is ineffective.

When I asked the chief administrator in the college where I work why there are so few women administrators in the college, his reply was that he didn't expect to see a woman president of the United States in his lifetime either.

Discrimination against women is so common at the university, that it is the accepted pattern. It is going to take close outside review for many years to alter this pattern. Any relaxation of Federal guidelines and enforcement will just prolong the discrimination. The University could be one source of future State and National women leaders if discriminatory patterns in hiring, pay and promotion are changed. It is going to take strict law enforcement to bring about these changes.

Sincerely,

DOROTHY MCMEEKIN.

Enclosure.

[From the State News, Sept. 30, 1974]

WOMEN WANT COUNCIL'S END

The Women's Advisory Council has recommended unanimously to President Wharton that it be dissolved as of Sept. 30, citing ineffectiveness due to its structure, and a lack of credibility on campus.

In a companion motion at its Sept. 16 meeting, the council said, "We further recommend to the president that he consider the establishment of a series of appropriate homogeneous interest groups to advise each of the major administrative divisions of the University, and that concurrent to establishing these groups, a review of the structure of the Department of Human Relations be carried out in order to insure the most effective mechanisms for affirmative action for women at this University."

The council met again Sept. 23 to formulate recommendations for alternative structures. It will finalize those recommendations at a potluck dinner Oct. 7, and then meet with President Wharton sometime that week. No other meetings are scheduled.

The moves comes 19 months after the council was named in February 1973. The structure had been created in September 1972, when the Board of Trustees established a Department of Human Relations, including an Office of Women's Programs and an Office of Minority Programs.

Through the vice president for university relations, the council is to advise the University on its policies, programs and procedures as they affect women in the University community.

Because the council was created by the trustees, the council can only recommend that it be dissolved. If their recommendation is not accepted, each member will have to decide personally whether to resign.

The motion to discontinue was made by Ruth Useem, the Committee on Committees representative, and professor sociology and the Institute for International Studies in Education.

She said the council has never had a clear purpose, that it has not confronted the issues, that its channels for giving advice had never been clearly outlined and that its advice was often sought too late.

Gwen Andrew, director of the School of Social Work, and the administration representative, seconded the motion. She too criticized the structure, adding,

"I do believe that there is a need for strong, forceful input and advice to the central administration on affirmative action for women. I think that it is a serious matter and . . . that for us to perpetuate this hoax is not helping the situation any."

The council has voted to retain its representatives on the search and selection committee for a new director of women's programs.

WOMEN AWAIT DECISION

(By Gary Hoffman)

Today is the deadline set by the Women's Advisory Council for President Wharton to dissolve the council—a gambit the women hope will bring better representation for student, staff and faculty women within the University.

Council members, in a 7–0 vote, recommended the dissolution of the body on September 16 and set today as the deadline for Wharton's decision. The council has also canceled all formal meetings.

The women say their action is necessary to force a reevaluation of the vague purposes and faulty structure of the nine-member council.

Wharton will not accept the recommendation until the administration and the council discuss the problems, Robert Perrin, vice president for University relations, said. A meeting between Wharton and the council is being set for the week of Oct. 7.

Ruth Useem, council member who made the motion, told the members Sept. 16 that the main purpose of the council has been to postpone controversial matters so they would not have to be faced by the University administration.

"My best assessment of the council's purpose is that it has the hidden purposes of 'cooling,' the reasonable, but often unpalatable-to-the-administration demands of women," she said.

Useem, a professor of sociology, said during an interview Thursday that the members could not directly confront problems and the University administration did not ask very often for advice.

"It's been an uneasy, unworkable committee," she said. "There was a feeling that we were not being in on the things that we should have."

Useem had reminded council members in making the dissolution motion that their advice was not sought on the projected affirmative action goals for employment of women at MSU until after the recommendations were made public by MSU officials.

Useem also said the council has never been sure about who it is supposed to advise.

Mary Kay Scullion, the Council of Graduate Students representative on the council, said the women's council could have been stronger and more effective.

"Communication has not been a two-way street," she said.

Useem and councilmember Gwen Andrew, who seconded the motion for dissolution, explain that action was necessary to bring about an evaluation of goals and purposes of the council.

They explained that an evaluation in August had to be postponed because of the difficulty in seating a quorum.

But the administration planned to start work on filling the new council appointments, and it appeared the needed evaluation and reforms would be postponed indefinitely, they explained.

"The action is a mechanism to bring a re-evaluation before a series of appointments are made," Andrew explained. "We tried to make it a visible decision.

"The members are trying to bring an end to the limbo kind of status that we find ourselves in, "she said. "My impression is that we have never been able to address significant matters."

Andrew, the director of the School of Social Work, said the problem is due to the structure of the council, not the University administrators or council members.

"I have never believed that the University would not listen," she said.

The real problem is that one council simply cannot represent the diverse groups of women in the University, who range from clerical-technical employees to tenured faculty, she said.

MASSACHUSETTS INSTITUTE OF TECHNOLOGY,
Cambridge, Mass., October 9, 1974.

Hon. JAMES G. O'HARA,
U.S. House of Representatives,
Washington, D.C.

DEAR CONGRESSMAN O'HARA: I am submitting the enclosed testimony for the consideration of the Subcommittee on Education in the hearings which it is conducting on affirmative action. Although I am an experimental elementary particle physicist rather than a social scientist, I am knowledgable concerning the availability of women scientists and engineers because of the studies which I have carried out for the American Physical Society as Chairwoman of the Committee on Women in Physics (1971) and for the Workshop on Women in Science and Engineering sponsored by the National Academies of Sciences and Engineering (1973). I am also currently engaged in analyzing data acquired by the National Research Council in their 1973 survey of doctorate scientists. Furthermore, I am acquainted with the practical aspects of affirmative action, since I am the affirmative action officer for the physics department at MIT.

I hope that this document will be useful to the subcommittee and I would be happy to answer any questions which it may raise. I also enclose a copy of a demographic report written last year, not as part of the testimony but for use as a reference document.

Sincerely yours,

VERA KISTIAKOWSKY,
Professor of Physics.

Enclosure.

PREPARED STATEMENT OF VERA KISTIAKOWSKY, PROFESSOR OF PHYSICS, MIT

I. INTRODUCTION

One of the central issues of affirmative action is the identification of a pool of of "qualified candidates" and use of the number of individuals in the given pool to set goals. A criticism leveled against affirmative action has been that the number of qualified women is so small that setting goals will lead inevitably to hiring women who are less well qualified than the available men. Similar arguments are made with respect to minority group members, but since I have demographic data for women and not for minorities, I will restrict this paper to a discussion of the situation for women.

Before presenting the data, it is important to clarify the issue of qualifications. First, one must be careful to specify the type of position under consideration. It seems obvious that the qualifications for a tenure position at an elite research oriented university are very different from those for an assistant professorship at a college where a major emphasis is on teaching. However, the opponents of affirmative action frequently discuss the former case and ignore the latter, conveying the impression that the small number of women qualified for the former is the "realistic" pool for all positions. Thus the subsequent discussion will be divided into a section on high prestige institutions and another on other institutions, in both cases considering both senior and junior appointments.

A third point on which information may be gained from a demographic study what effect, if any, affirmative action has had on the attitudes of women scientists, on their employment and on the academic institutions employing them.

II. HIGH PRESTIGE ACADEMIC INSTITUTIONS

At the high prestige institutions the stated prerequisite for a faculty appointment or promotion is research excellence. In the case of a senior position, this means demonstrated, "first in his field", excellence. In the case of a junior position, this means the promise of excellence. One may question whether in the past there has been universal agreement on and unvarying application of criterion of demonstrated excellence to all promotions, since an examination of any top department will show that there was quite a spread in the abilities of the senior faculty at the time that they received tenure. Many other things contribute to tenure decisions, even if one removes from consideration those individuals who received tenure because of outstanding educational or administrative services to the institution. However, with respect to the appointment of a woman or a minority group member, the criteria of research excellence are frequently applied in an absolute fashion and used to prevent the appointment of individuals of comparable quality with some of those already on the faculty. This procedure is justified by the argument that in a time where openings are very limited, one must only appoint the very best. This is a statement with which one cannot disagree in principle, but one can disagree with the concept of the existence of a unique set of standards defining "the very best" and their universal, equable application.

The women who might be qualified for senior positions at high prestige institutions would be found primarily among the following categories: women in junior positions approaching tenure at these institutions, and women in senior positions at other research oriented universities in government, in industry and at national laboratories. This definition errs in excluding a sizeable group of highly qualified women who have research positions, but not faculty rank, at major universities. However, it permits one to set a demographic lower limit on the pool of women for these positions of 2500 individuals. This figure may be arrived at as follows. There were more than 776 women, constituting 4.3% of the total sample of doctorate physical scientists, bioscientists, social scientists and engineers, on the faculty in all professorial ranks at the more highly rated (Roose-Anderson Rating 2.5–5.0) universities in 1973.[1] Furthermore, 1740 women were full professors in all fields at U.S. universities in 1972–73 constituting 6.7% of this group.[2] Since approximately half of the doctorate women scientists are not in academic institutions,[1] this suggests that there are more than 2500 women in the categories given above.

For the junior positions the pool may be defined by the number of women who have recently received a research doctorate. This number is 19,928 women who constitute 16.3% of all individuals receiving research doctorate degrees in the period 1970–73.[3] [4] Since there is no evidence that indicates that these women are on the average less qualified than their male counterparts and since their distribution among Ph. D. granting institutions is similar to that for men,[5] one may assume that the percentage of women Ph. D.'s who are potential candidates for junior positions at high prestige institutions is approximately the same as for men. Thus, at present women form 16.3% of the pool of candidates for these positions, a percentage which is, however, increasing. The number of women receiving doctorates in all fields increased by 15.1% between 1972 and 1973, and in contrast to the situation for men for whom the percentage went down by 0.3%.[4]

Thus, one concludes that the pools of women relevant to positions at prestige institutions, although small, are not negligible, and affirmative action goals are possible both for senior and junior positions. The question of qualifications of the members of these pools can only be answered on a case by case basis. However, it is worth noting that a criticism which has been made of pools based on percentages, which is that women on the average do less research, does not apply here. At the level of the junior pool men and women are equivalent, having completed graduate work and possibly a post-doctoral appointment. The definition of the senior pool was based not on all doctorate women, but only on those who had achieved recognition.

III. OTHER ACADEMIC INSTITUTIONS

At the other academic institutions research is sometimes a prerequisite for faculty appointment of promotion, but a much heavier and explicit emphasis

---

See footnotes at end of statement.

is placed on teaching and administrative abilities. Assuming, therefore, that for these institutions the pool of available candidates may be based on the number and percentage of women who have received doctorates, one arrives at the following results. The pool of women for senior positions may be based on the percentage of doctorates awarded to women in the period 1950–1969, which is 11.1%, and for junior positions, the percentage of doctorates awarded to women in the period 1970–73, which is 16.3%.[3 4] The numbers of women in these pools are 26,938 in the senior and 19,928 in the junior pool.[3 4]

This, however, is an underestimate since only 39.7% of men on faculties of U.S. colleges and universities have doctorates.[8] The percentage of women with doctorates on these faculties is 19.9%, this lower figure arising from the large percentage of women in junior colleges (33%)[3] and in fields where a master's degree is more commonly terminal.[8] Since a doctorate is not always a prerequisite and since a smaller percentage of doctorates are women than is the case for master's degrees, using the doctorates as a basis gives an underestimate by more than a factor of 30%. This may be seen from the following statistics. In 1968–71 the ratio of the doctorates granted to the master's was 1.4:1 for men and 1:2.9 for women.[5] In 1970 the ratio of scientists and engineers with doctorates to those with master's was 1.3:1 for men and 1:1.3 for women.[7]

Although there are differences in the average career patterns of men and women, the effects of this are less than 30% on the pools in question. This may be seen from the following data on the situation with respect to part-time work and career interruption. 91.8% of women faculty members and 96.1% of men faculty members were full time in 1972–73.[8] 19.7% of women faculty members have interrupted their career for more than one year for military or family reasons and 25.0% of men faculty members.[8] The figures for all doctorate scientists in 1973 are summarized below:

TABLE I.—EMPLOYMENT OF DOCTORATES[6]

[In percent]

	Men	Women
Full-time employed	89.3	64.5
Part-time employed	1.9	12.8
Unemployed, seeking employment	.9	3.3
Postdoctoral	2.3	4.2
All other	5.6	15.2

"All other" includes retired and "no report" as well as career interruption. These data indicate that the differences between men and women doctorates introduce at most a 30% difference, since both part-time employment and career interruption are usually temporary.

Thus, one may conclude that the use of doctorate women to define the pool is a conservative estimate since the diminution of the pool predicted by career pattern differences is more than cancelled by the increase due to degree level differences. An observation which indicates further that the estimate of the pool presented here is, in fact, conservative is the reported difference in initial ability between men and women doctorates. As shown by L. R. Harmon,[9] there is a significant difference for doctorates in all scientific fields in ability predictors at high school graduation and the ranking by sex and marital status is as follows: married women (ranked highest), unmarried women, unmarried men, married men (ranked lowest). Therefore, the doctorate women are apparently a more select group than the men.

IV. RECENT DEMOGRAPHIC CHANGES

Let me first present some evidence for a positive effect of affirmative action on the attitudes of women graduate students. Between 1972 and 1973 there was a 15.1% increase in the number of women receiving doctorates, whereas there was an 0.3% decrease in the number of men.[4] This was probably due to a perception of increased opportunity arising from the equalizing pressures of affirmative action.

See footnotes at end of statement.

This may be seen from the following argument. Since the median length of time from bachelor's degree to doctorate was 8.4 years,[4] these individuals received their bachelor's degrees in 1964–66, a period in which there were no marked changes with respect to the participation of women. Thus, this increase is due to a change in attitude during graduate school years. As previously mentioned, in the past women have been approximately twice as likely to leave graduate school with master's as a terminal degree as have men. However, the percentage leaving graduate school without a higher degree has been similar for men and women. Therefore, the growth in women's doctorates appears to arise from a change in attitude on the part of the women with respect to the value of continuing to a doctorate rather than stopping with a master's degree.

With respect to changes in the employment of women there are some small indications that women are in fact receiving somewhat more equitable treatment due to affirmative action. In 1972, 13.4% of the graduating doctorate men received postdoctoral fellowships and research associateships, while women received 9.8%. In 1973 they received 13.5% and 11.0%, respectively.[3,4] With respect to faculty appointments, the overall change has been change. In 1968–69 the percentage of university faculty (including lecturer and instructor) who were women was 14.8%. In 1972–73, it was 16.5%.[6] Since the percentages in two-year and four-year colleges declined slightly in this period, the overall change was less than 1%.[6]

Therefore, there are still major differences. As Table I indicates doctoral women still have a three times higher involuntary unemployment rate. The biggest discrepancy with respect to those who are unemployed and seeking employment is between men and women whose ages are less than 35. This contradicts the mythology that reverse discrimination guarantees all new women doctorates a job. In 1973 1.0% of these men were unemployed and seeking employment and 5.5% of the women.[7] Women still are concentrated in the less prestigious academic institutions and in the lower ranks.[6] They still earn lower median salaries irrespective of rank and institution type [3] or age and field.[7] Thus the purposes of affirmative action are far from being achieved.

Affirmative action has not been in effect long enough and has not made enough changes to discover whether it has affected the quality of research as predicted by its opponents. Any statements on this issue are mere speculation. However, the impact of affirmative action on the academic institutions does have one negative aspect, the increased administrative load and the generation of paper work. It seems to some that correct adherence to affirmative action guidelines has become more important than achieving the purposes underlying affirmative action.

There are also consequences for the women, some of whom are invited to apply for numerous positions for which they are not considered seriously. These applications are, however, used in the affirmative action search statistics of the institutions in question. I have myself been invited to apply for an assortment of positions including one in a department of physical education. Presumably someone felt that this was appropriate for a woman on a list of the American Physical Society. However, these negative aspects are insignificant in comparison with the fact that some departments in some institutions are seriously considering women and minority group members for faculty positions. Furthermore, an even larger number are now increasingly willing to offer women and minority graduate students treatment which is equally supportive with that accorded white men.

V. CONCLUSIONS

The numbers and percentages of women qualified for appointments in institutions of higher education are not negligible and it is perfectly reasonable to ask institutions of all varieties to establish affirmative action goals. Affirmative action has apparently had a positive effect in that the perceived broadening of opportunity has coincided with an increase in the percentage of women continuing to a doctorate. The situation of women at academic institutions has improved slightly, but there is still a great deal of room for improvement. Since the percentages of women on the faculties at the prestigious academic institutions are still small and most of the new women faculty have only held their appointments for one or two years, it is not yet possible to assess the impact of affirmative action on the quality of research carried out at these institutions. There are negative aspects

---

See footnotes at end of statement.

of affirmative action, administrative burdens for the institutions and the problems that paper compliance cause minorities and women. It would be desirable to find methods of easing these, but not at the cost of abandoning affirmative action and the possibility of eventual equality of opportunity.

WOMEN IN ENGINEERING, MEDICINE, AND SCIENCE—A DEMOGRAPHIC PAPER PREPARED FOR THE CONFERENCE ON WOMEN IN SCIENCE AND ENGINEERING, NATIONAL RESEARCH COUNCIL, JUNE 11-12, 1973

I. INTRODUCTION

As a basis for any discussion of the better utilization of women engineers, doctors or scientists, it is important to have a good understanding of the numbers active in the various fields. A considerable amount of information is now available, from studies carried out by various organizations and by committees on the status of women in various professions. This paper contains a compilation of such data and also presents some thoughts on how it may be interpreted.

The data is not equally good for all areas. In some fields there is quite detailed information, whereas in others, it is sparce. This leads then to the question of how to arrive at the number of women in the pool containing individuals with the general qualifications for some type of position, such as membership on NAS-NAE-IOM/NRC committees. Qualifications are generally not ascertainable in a statistical study unless they are very straightforward, for example, "mathematics professor at a top ranking university." Some numbers for such categories will be presented and the background of these figures will be discussed. However, it is appropriate to comment in advance of presenting data such as numbers of women professors, that they are not necessarily indicative of the number of qualified women, since women have been underrepresented in such categories for reasons other than ability.

The second section of this study presents information on women in engineering; the third, information on women in medicine; and the fourth, information on women in science. The fifth section contains a discussion of how these data should be used to define the size of the pool of women qualified for a particular type of position. In the concluding section the implications of the preceding discussion will be considered with respect to the identification of women for NAS-NAE-IOM/NRC committees:

II. WOMEN IN ENGINEERING

There were approximately 100,000 engineers in the United States in 1971 and of these 0.5% were women. [*1*] Figure 1 shows the percentage of doctorates in engineering granted to women as a function of time, and this is seen to have decreased from 0.9% in the 1920's to a minimum of 0.3%, in 1950's. Table I gives the number and percentage of women currently available in the pool of doctorate level engineers with at least four years of experience categorized by sub-field of engineering. Table II gives the number and percentage of degrees awarded to women in engineering by degree level for the period 1962–71. The same information is also given for the fields of architecture and computer science which are frequently grouped together with engineering in demographic studies. Table II also gives a projection for the period 1972–81, indicating a four-fold increase in the pool of doctorate level engineers. It should be noted

that these projections involve a conservative estimate of the rate of increased of the percentage of degrees awarded to women.

Information concerning women engineers with doctorate degrees at educational institutions is presented in Table III. The individuals included in these data appear both in the Doctorate Records File and the National Faculty Directory and therefore persons with foreign degrees and women whose names have changed are excluded. The rated institutions have percentages of women which are lower than those in the total sample. Forty three percent of the women are in these institutions, whereas for the total sample, the percentage is 66%. Due to the very small sample involved this observation is not independently significant. However, it indicates a pattern that becomes statistically significant in the data presented in section IV of this paper.

Other	0	0	331	4.3
Total	21		7,767	
DRF total	110		26,969	

Note: Reference at end of statement.

Table IV gives the number and percentage of women engineers in the federal service in 1969. This information is not broken down by grade or degree level. Table V gives the number and percentage of women in the federal service by grade level in 1972, not separated by field. Since the engineers will generally be grade 9 or higher, the last column probably approximates their distribution by grade level.

The Society of Women Engineers carried out a survey in 1972 which yielded an interesting profile of their members. Table VI gives the number and percent of respondents categorized by curriculum of highest degree and degree level. Comparison with Table I and II indicate that the main difference between this sample and the general population of women engineers is that the percentage at the bachelor's level is smaller in the survey sample. Table VII gives the distribution by present field of employment and Table VIII, by type of employer. Table IX gives the division of the sample into employment function categories and Table X, into levels of supervisory responsibility.

TABLE IV.—NUMBER AND PERCENT OF WOMEN IN SELECTED FEDERAL OCCUPATIONS, 1969 [5]

Occupations	Total number	Women	
		Number	Percent
1. Professional engineering occupations:			
General engineering	13,862	44	.3
Safety engineering	504	10	2.0
Fire prevention engineering	83		
Materials engineering	861	13	1.5
Landscape architecture	544	8	1.5
Architecture	1,515	43	2.8
Civil engineering	17,412	61	.4
Sanitary engineering	957	4	.4
Mechanical engineering	10,646	43	.4
Nuclear engineering	1,358	4	.3
Electrical engineering	4,589	14	.3
Electronic engineering	16,353	64	.4
Aerospace engineering	9,673	83	.9
Naval architecture	1,244	7	.6
Mining engineering	459		
Petroleum engineering	240		
Agricultural engineering	500	2	.3
Ceramic engineering	36	1	2.8
Chemical engineering	1,390	12	.9
Welding engineering	92		
Industrial engineering	2,274	8	.4
Total	84,692	421	.5
2. Some other professional occupations (for comparison):			
Accountant	20,241	1,409	7.0
Attorney	10,172	634	6.2
Chemist	8,248	1,249	15.1
Computer specialist	18,596	4,044	21.7
Librarian	3,447	2,427	70.4
Mathematician	3,553	789	22.2
Physicist	5,700	159	2.8
Social worker	2,362	1,129	47.8
Statistician	2,248	456	20.3

Note: Reference at end of statement.

TABLE V.—NUMBER AND PERCENT OF WOMEN IN THE FEDERAL SERVICE BY EQUIVALENT GRADE, OCTOBER 1972 [6]

Grades	Total number	Number of women	Women, percent of total	Percent of women, grade ≥ 9
1 to 2	34, 796	25, 303	72. 7	
3 to 4	[illegible] 884	207, 980	75. 1	
5 to 6	[illegible]	171, 733	65. 6	
7 to 8	15[illegible]	64, 213	42. 6

TABLE VII.—PERCENT OF WOMEN ENGINEERS [illegible] FIELD OF EMPLOYMENT. DATA FROM A SURVEY OF 346 WOMEN ENGINEERS CONDUCTED BY THE SOCIETY OF WOMEN ENGINEERS, JUNE 1972 [7]

Field of employment	Percent
Aerospace engineering	11
Computing	9
Mechanical engineering	9
Electrical engineering	8
Civil engineering	6
Chemical engineering	6
Communications	6
Management and business administration	4
Electronics engineering	4
Engineering (general)	3
Engineering sciences	3
Industrial engineering	3
Science (basic)	3
Transportation engineering	2

TABLE VIII.—PERCENT OF WOMEN ENGINEERS BY TYPE OF EMPLOYER. DATA FROM A SURVEY OF 346 WOMEN ENGINEERS CONDUCTED BY THE SOCIETY OF WOMEN ENGINEERS, JUNE, 1972 [7]

Type of employer	Percent
Private industry or business	62. 0
Federal Government, civilian employee	14. 0
College or university	10. 0
Self-employed	4. 0
State government	3. 0
Nonprofit organization other than a school	2. 0
Military service or USPHS—Active duty	2. 0
Local government	1. 0
Junior college or technical institute	1. 0
Secondary, elementary, or other school	. 3
Other	3. 0

TABLE IX.—PERCENT OF WOMEN ENGINEERS BY EMPLOYMENT FUNCTION. DATA FROM A SURVEY OF 346 WOMEN ENGINEERS CONDUCTED BY THE SOCIETY OF WOMEN ENGINEERS, JUNE, 1972 [7]

Employment function	Percent
Design	20
Analysis	16
Research	12
Development	11
Administration	9
Consultation	7
Teaching	7
Planning	6
Production	4
Sales and service	2
Other	7

TABLE X.—PERCENT OF WOMEN ENGINEERS BY LEVEL OF SUPERVISORY RESPONSIBILITY. DATA FROM A SURVEY OF 346 WOMEN ENGINEERS CONDUCTED BY THE SOCIETY OF WOMEN ENGINEERS, JUNE, 1972 [7]

Supervisory responsibility	Percent
General management of organization	5
Management of major department, division or program	10
Supervision of project or section	11
Supervision of team or unit	14
Indirect or staff supervision	21
No regular supervision given	39

III. WOMEN IN MEDICINE

The percentage of active physicians who are women was 6.7% in 1969. [8] A survey made in 1970 indicated that approximately one third of these women were educated outside the United States, whereas less than one sixth of the male physicians were foreign educated. [9] This difference arises from the fact that the percentage of physicians who are women is much higher in some other countries. In the United States the percentage of M.D. recipients who were women remained approximately constant ~5% for the period 1920–60 and then began to increase, reaching 8.4% in 1970. [9] This upward trend appears to be continuing as is seen in the data given in Tables XI and XII.

Table XIII gives the number and percentage of physicians who are women by specialty. The medical specialty with the largest representation is pediatrics. The surgical specialties in general have fewer women with only obstetrics/gynecology having a percentage approximately equal to that of women in the profession. Table XIV gives the percentage of women in the specialties by type of practice and they are seen to be represented in larger percentages in hospital based practice than in office based practice.

Table XV gives the composition of medical school faculties in 1971 by sex and the percentage of women who are full professors is less than both the percentage of M.D.'s and the percentage of Ph.D.'s in the sciences who are women (respectively 6.7% [8] and 9.1% [12]). The lower professional ranks are seen to have a larger representation of women. Table XVI which gives the percent of first appointments to medical school faculties by sex and year of first appointment indicates that this is probably due to a recent increase in such appointments. It should be remarked that this increase can not be solely due to an increase in the numbers of women available since the majority of the individuals represented in the 1968–72 faculty increase received their degrees in the same period, a period when 8% of those receiving M.D. degrees were women (Table XII). Thus this recent increase is probably due to affirmative action programs at these medical schools. Further increases may be expected as the percentage of women in the field grows larger, providing that equal employment opportunity becomes a reality.

TABLE XI.—WOMAN APPLICANTS TO U.S. MEDICAL SCHOOLS AND ENTERING STUDENTS FOR SELECTED YEARS FROM 1929–30 TO 1972–73 [10]

1st-year entering class	Total applicants	Woman applicants: Number	Woman applicants: Percent of total applicants	Total entering students	Woman entering students: Number	Woman entering students: Percent of entering class
1929–30	13,655	481	3.5	[1] 6,457	[1] 291	4.2
1959–60	14,952	1,026	6.9	8,173	[2] 504	6.5
1970–71	24,987	2,734	10.9	11,348	1,256	11.1
1972–73	[3] 37,000	[3] 5,920	[3] 16.0	[4] 13,570	[4] 2,284	16.8

Mathematics physical science, and engineering	2	100	91	9	90	10
Behavioral sciences	5	100	64	36	98	2
Allied health	3	100	45	55	96	4
All other	4	100	83	17	92	8

[1] Percentages may not add to 100 due to rounding.
[2] Less than 0.5 percent.

TABLE XVI.—DISTRIBUTION OF U.S. MEDICAL SCHOOL 1971-72 FACULTY BY YEAR OF 1ST APPOINTMENT AND BY SEX [10]

Sex	Year of first appointment					Total appointments
	Pre-1953	1953-57	1958-62	1963-67	1968-72	
Male	3, 298	2, 703	5, 270	7, 052	8, 776	28, 355
Female	323	381	778	1, 166	1, 887	4, 748
Percent female	(8. 9)	(12. 4)	(12. 9)	(14. 2)	(17. 7)	(14. 3)
Total appointees	3, 633	3, 091	6, 069	8, 259	10, 755	33, 323

Tables XVII and XVIII complete the picture of medical school faculties in 1971 by giving the percent by basic specialty and earned degree. A noticeably smaller percentage of the women are in clinical specialties (55% vs. 80% for the men) and a larger percentage are in behavioral sciences and allied health (respectively 16% and 17% vs. 7% and 5%). Since the percentage of Ph.D.'s who are women is higher in behavioral science (19.3 in psychology [2]) and medical science (9.1% [12]) than the percentage of M.D.'s, this pattern is readily understood.

TABLE XVII.—BASIC SPECIALTIES OF MEDICAL SCHOOL FACULTIES, BY SEX FOR 1971, OFFICE OF RESOURCES ANALYSIS. [11]

[Total faculty=28,452]

Basic specialties	Number			Horizontal percentages		Vertical percentages

IV. WOMEN IN SCIENCE

The discussion in this section will mainly concern itself with doctorate level scientists, but other data will be presented where relevant. Figure 1 shows how the percentage of doctoral degrees awarded to women has varied as a function of time. In all of the fields, the same general features are observed decrease in percentage from the value in the twenties to a minimum in the fifties followed by an increase in the sixties and early seventies. This trend has been pointed out in numerous studies of professional women and is usually attributed to the changes in attitude to the role of women in our society. However, the features relevant to the present discussion is the size of the percentages and the encouraging trend in the last decade.

Table XIX gives the numbers and percentages of Ph.D's awarded to women in the period 1930–70 from which come the professionally active women scientists who have at least a few years of post-doctoral experience. Table XX gives the numbers and percentages of women in the 1970 National Register of Scientific and Technical Manpower by field and degree level. These data are indicative of the number of professionally active women, but are not quantitatively accurate.

Included in the samples are some women who were unemployed and not seeking employment at the time of the survey. On the other hand, the method of collection of the data was through the professional societies and therefore, not all scientists were reached. For example, the anthropologists were surveyed through the American Anthropological Association which essentially has a prerequisite of a doctorate for membership and thus the data on other degree levels is necessarily incomplete. Another example is the physicists, surveyed by the American Institute of Physics. This group should be quite complete, since the AIP contacted individuals through institutions as well as through its membership list. The result of this survey was 347 women Ph.D.'s in physics, and 77 in astronomy. In 1971 the Committee on Women in Physics of the American Physical Society sent out questionnaires to the 1354 women physicists listed in the National Register, and an additional but possibly overlapping group of 533 individuals. The response included 295 of the 347 Ph.D.'s on the Register plus an additional 150 Ph.D. women.[13] Eleven percent of these were unemployment and seeking employment, 2% were unemployed and not seeking employment, and 2% were retired. The result is that there were apparently 500 Ph. D. women physicists and astronomers in 1971, and 424 in the Register sample in 1970. Since 45 Ph. D. degrees were awarded in these fields in 1970,[2] this still implies that at least 7% of the Ph.D. women were not in the Register sample. This is a lower limit because the Committee on Women in Physics did not deliberately survey the astronomers and therefore, probably did not have a complete sample.

TABLE XIX.—NUMBER AND PERCENT OF Ph.D. DEGREES AWARDED IN THE PERIOD, 1930–69 BY FIELD AND SEX, DOCTORATE RECORD FILE, NATIONAL RESEARCH COUNCIL [2]

Field and subfield	Total number awarded	Number awarded to women	Percentage awarded to women
Astronomy and astrophysics	787	81	9.3
Chemistry	31,958	1,851	5.5
Earth sciences	6,214	154	2.4
Mathematics	9,582	681	6.6
Physics	16,290	343	2.1

Linguistics	211	18.6	184	31.4	447	23.5
Total	9,441	7.6	12,476	13.3	29,293	9.4

Table XXI gives the percentages of women in the various categories of employer type and, for comparison, the corresponding percentages for the total sample, both by field. The category "Educational" includes universities, colleges, junior colleges, and secondary schools. Table XXII gives the same information for physicists by highest degree and Table XXIII gives the number of women immunologists by highest degree and type of employer. From these tables it is evident that in almost all fields the employer type with the largest percentages of women scientists is the educational institution (exceptions: computer science and statistics), irrespective of degree level.

The information available on women in educational institutions is not complete. The data on women scientists in faculty positions at universities and colleges is generally good, but the information concerning women in non-faculty positions and those in junior colleges and secondary schools is much less reliable.

TABLE XXI.—PERCENT OF SCIENTISTS BY FIELD, SEX, AND TYPE OF EMPLOYER, NATIONAL REGISTER OF SCIENTIFIC AND TECHNICAL PERSONNEL, 1970 [12]

	Educational		Government		Nonprofit		Industry		Total number	
	Total	Women	Total	Women	Total	Women	Total	Women	Total	Women
Chemistry	22.0	40.2	7.2	10.2	2.4	6.3	56.6	30.0	89.980	6,201
Earth sciences	27.5	46.5	17.6	20.4	1.0	3.4	42.0	10.0	23,756	852

Not employed	10			60	40
No report	6		17	33	50

Table XXIV gives the percentage of the faculty at universities and colleges that are women and Table XXV gives the numbers. The pattern visible in these data is characteristic; women are least represented in the higher ranks and in institutions of higher prestige. However, in 1972–73 there was a total of 10,982 women professors (assistant, associate, and full) in universities and 20,327 in four-year colleges. Table XXVI gives percent and number for women faculty members in departments of psychology with no distinction between types of institutions. The total number of women professors of psychology in the 170 departments represented in these data in 1971–72 was 435. The percentages should be compared with the number of Ph. D.'s in psychology who are women (19.3% in Table XIX and 18.0 in Table XX). Table XXVII gives the percentage and number of women faculty for sociology as a function of the prestige standing of the institution. From this table, it is seen that in 1968–69 there were 38 women sociology professors in the top and above average departments and 217 in all departments. The percentages should be compared with the percentage of Ph.D.'s in sociology who are women (16.6%, Table XIX and 14.1%, Table XX). Table XXVIII shows how these percentages have changed in the period 1970 to 1972 and increases are mainly in the lower ranks and less prestigious institutions. Table XXIX gives the number and percentage of women faculty in departments of political science in 1969 by rank. The percentages should be compared with the percentage of Ph.D.'s in political science who are women (7.9%, Table XIX and 6.9%, Table XX). Table XXXA gives the number of women with faculty appointments in 397 departments of economics by degree level and date of appointment. More than 50% of these women have been appointed since 1970, an increase which can only be due to the impact of affirmative action programs. Table XXXB gives the number and percent of women faculty by rank as well as the number and percent of women graduate students. The percentages should be compared with the percentage of Ph.D.'s in economics who are women (5.0%, Table XIX and 4.4%, Table XX).

TABLE XXIV.—WOMEN AS PERCENT OF TOTAL FULL-TIME INSTRUCTIONAL FACULTY ON 9-, 10-MONTH CONTRACTS IN INSTITUTIONS OF HIGHER EDUCATION, BY ACADEMIC RANK AND CONTROL AND LEVEL OF INSTITUTION: 50 STATES AND DISTRICT OF COLUMBIA, 1972-73 [15]

Control and level of institution	Total, all ranks	Professors	Associate professors	Assistant professors	Instructors
All institutions	22.3	9.8	16.3	23.8	39.9
Publicly controlled, total	22.7	10.0	15.8	23.7	39.2

Faculty, by rank:						
Professor	1,537	48	3	577	14	2
Associate professor	1,114	59	5	219	8	4
Assistant professor	1,466	116	8	352	31	9
Instructor	269	47	17	24	5	21
Special lecturer	55	14	25	22	15	68
Total	4,441	284	6	1,194	[2] 73	6

[1] This refers to the 43 universities sometimes called "the chairman's group" which award about ⅔ of all Ph. D. degrees in economics. They are Brown University, University of California—Berkeley, University of California—Davis, University of California—Los Angeles, Carnegie-Mellon Institute, University of Chicago, University of Colorado, Columbia University, Cornell University, Duke University, University of Florida, Harvard University, University of Illinois, Indiana University, Iowa State University, Johns Hopkins University, University of Maryland, Massachusetts Institute of Technology, University of Michigan, Michigan State University, University of Minnesota, New York University, State University of New York—Buffalo, University of North Carolina—Chapel Hill, Northwestern University, Ohio State University, University of Pennsylvania, University of Pittsburgh, Princeton University, Purdue University, University of Rochester, University of Southern California, Stanford University, Texas A & M University, University of Texas—Austin, Vanderbilt University, University of Virginia, University of Washington—Seattle, Washington State University, Washington University—St. Louis, Wayne State University, University of Wisconsin, Yale University. With the exception of the University of Rochester, these universities provided the information requested.

[2] Information by rank not available for 2 full time and 5 part time faculty members.

Table XXXI gives the percentage and number of women faculty in departments of physics by rank and type of institution. The percentages should be compared with the percentage of Ph. D.'s in physics who are women (2.1%, Table XIX and XX). In 1971–72 there were 7[illegible] women physics professors in the universities and 172, in the colleges. Table XXXII gives the number of male and female faculty in 19 leading departments of mathematics for four academic years. In these departments which constitute approximately one-eight of the total number of university mathematics departments, there are 15 women professors. The marked increase in the professorial rank from that in 1968–71 to that in 1971–72 is almost certainly attributable to the impact of affirmative action. The percentage should be compared to the percentage of Ph. D.'s in mathematics who are women (6.6%, Table XIX or 5.9%, Table XX).

Tables III and XXXIII give the results of a study carried out by Lindsey Harmon of the National Research Council relating the names of individuals on the Doctorate Records File (1930–69) and the 1971–72 National Faculty Directory. Since this omits individuals whose names changed and since ambiguous names were deleted, this study does not include all Ph. D.'s in the National Faculty Directory. Because of the greater loss of women due to name change by marriage, no comparison of the absolute numbers can be made and the samples of women may actually be incorrect by a factor of as much as 3 (75% of Ph. D. women physicists are married [14]). However, the percent of women by type of institution is probably not affected. RA signifies the Roose-Anderson rating for all departments of the institution of employment. Unrated Ph. D., etc., signifies Ph. D. granting institutions not included in the Roose-Anderson ratings. The Doctorate Records File (1930–69) totals are also given for comparison. As in all of the previous data, the percent of women is higher at the less prestigious institutions.

TABLE XXXI.—NUMBER AND PERCENT OF FACULTY DEPARTMENTS OF PHYSICS BY SEX, RANK AND TYPE OF INSTITUTION. [13]

	Professor	Associate professor	Assistant professor	Lesser rank	Total
A. 4-year colleges with undergraduate program only (743):					
Number women	55	33	56	44	188

There is much less information available concerning women scientists employed by the government than for those in universities and colleges. Table V gives the distribution by grade of women in the federal service showing the sharp decline in numbers of women at the higher grade levels. Figure 2 gives the distribution by grade and sex of the staff at NIH. Table XXXIV gives the division of Ph.D. Physicists by sex, type of employer and primary work activity. The women physicists employed by the government are seen to constitute a smaller percentage in management than in research. Since the highest grade levels are management positions, this implies that the women are at a lower median grade than the total sample. This has the interesting consequence that the median salary for doctorate physicists in government research positions is higher for women than for men ($17,500 vs. $17,000) [14], probably due to the women remaining at these levels and accumulating seniority and the men being promoted into management (median salary $26,000) [14]. This is the only subcategory where women physicists have higher median salaries then men. Table XXXV gives the number and percent of economists in the federal service by grade and sex. Here again the women are seen to be at a lower median grade.

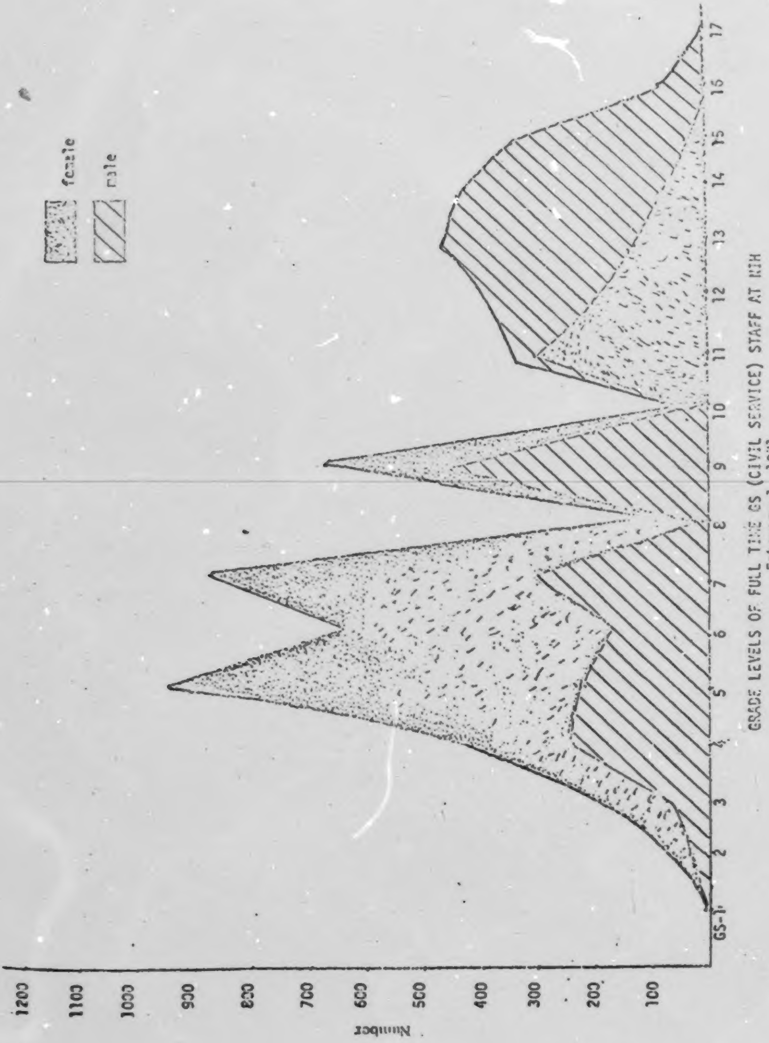

FIGURE 2

The information for women scientists in industry is also rather sparse. Figure 3 gives the occupational distribution of all men and women employed in industry also showing a low percentage of women in managerial positions. Table XXXIV gives the division of Ph.D. physicists in industry in 1970 and only one woman is found in a managerial position. The survey of the Committee on Women in Physics identified four Ph.D. women in industry in 1971 who were in managerial positions [14], a difference explainable by the time interval between the two studies and the difference in sample. However, it is not only true that there are very few highly placed women physicists in industry, it is also a fact that there are very few Ph.D. women physicists at any level in industry. For fields where industrial employment of women involves substantial numbers (see Table XXI) there may be an appreciable number of women at higher levels even if the percentage is relatively small.

TABLE XXXIV.—NUMBER AND PERCENT OF PH. D. PHYSICISTS BY SEX, TYPE OF EMPLOYER AND PRIMARY WORK ACTIVITY, NATIONAL REGISTER OF SCIENTIFIC AND TECHNICAL PERSONNEL, 1970.[13]

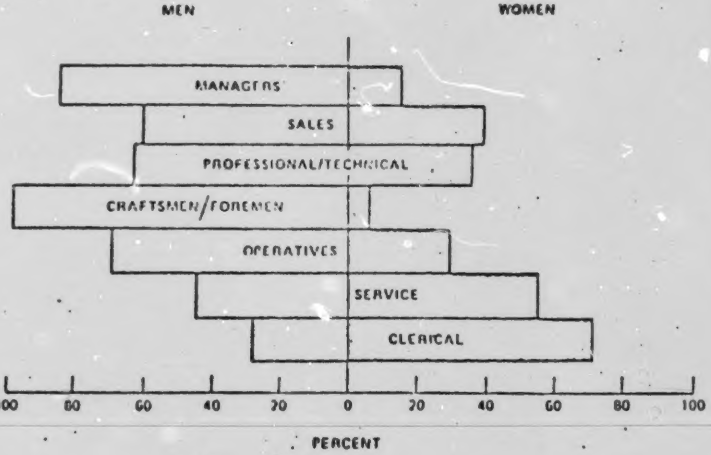
FIGURE 3.—Occupational Distribution of Men and Women in Industry in 1968. [23]



V. AN INTERPRETATION OF THESE DATA

The overall impression conveyed by these statistics is that of small percentages, although not always of small numbers. However, if the selection criteria used to define a given sample are "full professor in ——— at a major university" then the numbers also become very small. There are signs that this may change in the next two decades. The academic affirmative action programs have started to increase the number of women in the lower ranks of the faculty. Similar programs in industry and government will also effect increases there, but again mainly by an influx of young women scientists. This should encourage the further increase in the percentages of women achieving advanced degrees in science and the percentage going into engineering and medicine. From this point of view affirmative action can be thought of as a pump priming operation. Once the patterns of the past are destroyed and women have equal opportunity and encouragement to flow into the professions with men, the need for affirmative action will vanish.

At present, however, the pattern visible is still very largely a legacy of the past and affirmative action is a necessity of the present. Therefore, the question of how one may interpret statistics such as those presented in this paper must be considered. In the case of positions relevant to the women who have recently received their degrees, the number available could be taken to be approximately equivalent to the number of degree receipients. However, this is an assumption that would not meet with universal acceptance. For example, many would argue that the number of women in the group from which faculty for the highest ranked institutions would be selected is a fraction of the total number of women similar to the fraction of men who are in the equivalent group. However, this ignores the fact that there is much greater pre-selection in the case of the women, both with respect to determination and ability. Figures 4 through 6 illustrate this point. They are taken from a study of high school ability patterns and give profiles of the high school performance of three groups of scientists by sex and marital status at the time of receiving their doctorate. The performance is based on grade point average (GPA) in four fields, rank in the graduating class, and a standardized ability test score. In all categories, the women are higher than the total sample. A profile was not given for other physical sciences or engineering since it was felt that the size of the samples made the data unreliable. However, for these fields and for medicine, it is reasonable to predict a similar result.

Since the women degree recipients are a group whose pre-selection criteria are different from those of men, it is not correct to assume that the percentages qualified for various positions are the same as the equivalent percentages for men. For present purposes then, a better assumption is that the number of women degree recipients in the group from which candidates for a given position would be drawn is approximately the total number in the sample.

FIGURE 4. Profile of Bio-Scientists by Sex and Marital Status at Doctorate, on Six High School Variables. [24]

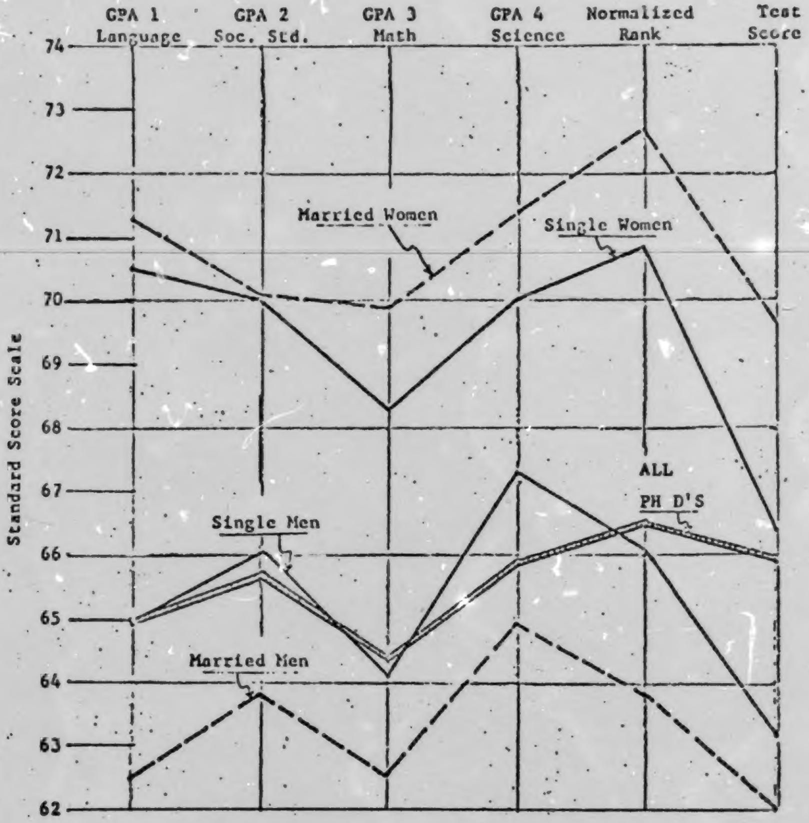


FIGURE 5.—Profile of Social Scientists, by Sex and Marital Status At Doctorate, on Six High School Variables.[24]

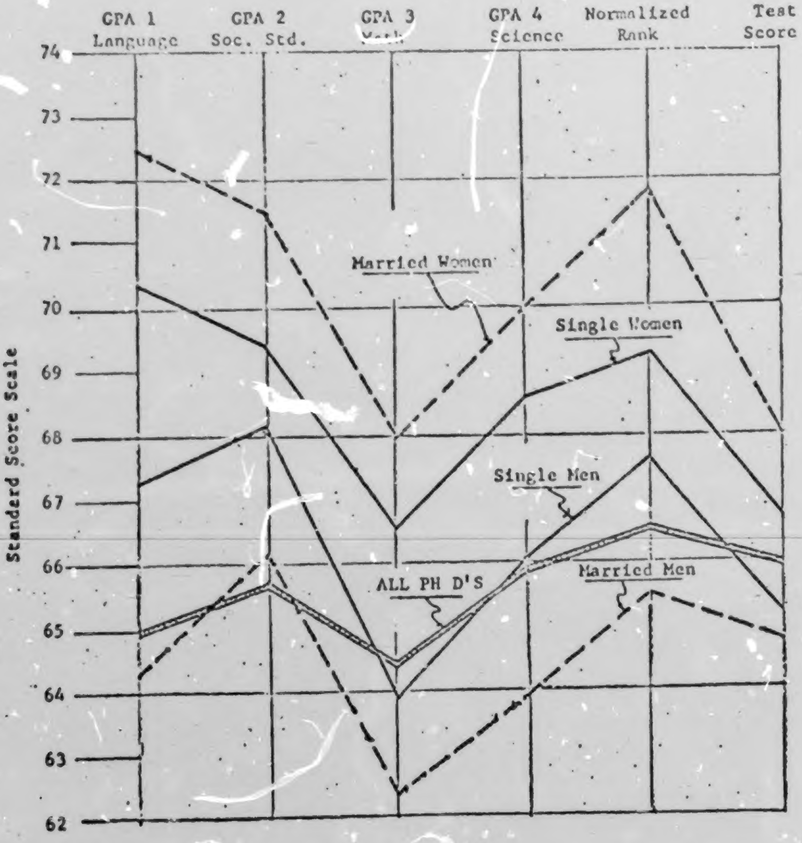

FIGURE 6.—Profile of Chemists, by Sex and Marital Status At Doctorate, on Six High School Variables.[24]

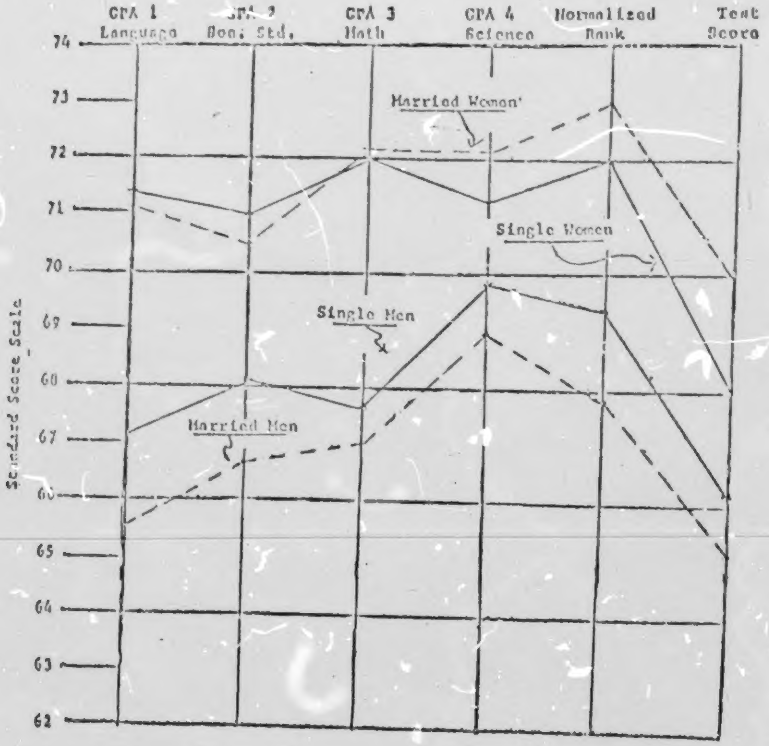

Turning to the women with at least several years of postdoctoral experience, the problem becomes even more difficult. Social patterns and discriminatory practices have caused a significant difference in the employment pattern of women. The NAS report, "Careers of Ph. D.'s", concludes: "Women's careers are less clear-cut than men's. Those of single women most closely resemble men's careers. Typically, women Ph. D.'s salaries are about three-fourths those of men at equivalent intervals past receipt of the Ph. D. degree. Fewer women are in the never-academic group; more switch back and forth between academic and non-academic jobs; those always in academia are proportional to the numbers of men always in academic jobs."[25] However, even in the group, "always academic" the percentage of women who achieved professorships was significantly less than that for men (~65% vs. ~85% in the biosciences and 55% vs. ~85% in the social sciences after ~25 years of experience [25]). The tables presented in Section IV of this report indicate the positions in which the rest of the academic women are found. In psychology (Table XXVI) 13% of the women are in research appointments and 33% in instructor, lecturer, etc. In sociology (Table XXVII) 27% of the women are in research appointments and 27% in instructor, lecturer, etc. In political science (Table XXIX) 12% are in "other" and 17% in instructor. In physics (Table XXX) 21% are in "lesser rank". Thirty-eight per cent of the women mathematicians in the nineteen departments surveyed (Table XXI) were instructors or lecturers. Fifty-five percent of Ph. D. women in the National Faculty Directory (Table XXXIII) were in unrated institutions and 10% were in junior colleges and "other". Of the $\sim$60% of women physicists who work at educational institutions, $\sim$19% are in junior colleges and secondary schools, $\sim$16% at colleges and universities but not on the faculty, $\sim$16% on the faculty at colleges and $\sim$7% on the faculty at universities.[13]

The minimum number of women in the pool of individuals qualified for a particular position can be arrived at by applying the same criteria as are used for men. For example, if the basic criterion for consideration for a particular position is "tenured professor at a top ranking institution or equivalent", then the number of women available is at least the number in this category. However, because of the different career patterns, other women who are also qualified for this position might be found in un-tenured or non-faculty positions or at less prestigious institutions. Therefore the actual number of women in the "pool" from which nominees for the position could be drawn should be increased to include the number of individuals in these other categories. It is obvious that there will also be men at less prestigious institutions who are equally qualified with others at top ranking institutions. However, the discussion so far would seem to indicate that this is a much more important effect for women since there are so few both in percent and number in the higher positions. Thus the actual number of women in any particular "pool" should be bracketed between minimum number reached by applying the usual criteria and a maximum number reached by including other appropriate categories. As an illustration, consider the size of the pool of women qualified for the position of associate professor in a given group of universities. The minimum figure would be given by the number of women at these universities who have been assistant professors for several years. A pool more in keeping with the goals of affirmative action would include women with research appointments and lecturer's positions at these universities, women who have not had formal positions due to nepotism rules but who have excellent research records and women at the appropriate level in a less prestigious group of institutions. Only by making such an adjustment to the realities of the pattern created by our previous history can the number of women at all levels be increased substantially in less than a decade.

CONGRESS OF THE UNITED STATES,
HOUSE OF REPRESENTATIVES,
Washington, D.C., October 9, 1974.

Hon. JAMES G. O'HARA,
Chairman, Special Education Subcommittee,
Washington, D.C.

DEAR JIM: I have been particularly interested in your recent hearings on affirmative practices and policies at institutions of higher education. Although unable to testify at the hearings, I am taking this opportunity to affirm my support for vigorous enforcement of federal guidelines.

As you know, there has been a great deal of publicity about the evils of reverse discrimination. The DeFunis case highlighted this issue earlier this year until the Supreme Court ruled it as moot. Now, the issue has extended to hiring practices at the college or university level, with particular focus on the Berkeley situation. I believe the weight of evidence strongly suggests an educational system in need of reform and greater compliance efforts.

In a July 1972 report entitled "Access to College for Mexican Americans in the Southwest," the College Entrance Examination Board concluded that while 140,000 Mexican Americans were enrolled in Southwestern colleges in fall, 1971, an increase of another 100,000 would be needed to "provide a number . . . proportional to their representation in population." Further, it documented a serious gap in Mexican American student to faculty ratio. The report pointed out that a 20:1 ratio was generally accepted as a "typical student/faculty ratio," but for Mexican Americans, the ratio was almost 100:1.

It is my opinion that, in contrast to quotas, goals, and estimates are essential to achieving equal opportunities for minorities and women. Without such guidelines, we would fall prey to vague and unenforceable standards. As Peter Holmes, Director of the HEW's Office for Civil Rights stated: "The affirmative action process is most certainly not anti-merit. . . . Indeed, it is because employment decisions have been based in part on practice and procedures that were unsound and invalid, to the disadvantage of certain persons or classes of persons, that Federal contractors are now required to take affirmative measures." Similarly, Assistant Attorney General Stanley Pottinger stated that "goal setting is an inducement to adopt sound employment practices. . . ." The federal courts have also confirmed the need for affirmative action including the use of standards which validly predict successful job performance.

It is my hope that your inquiry into this issue will help to develop a strong compliance program for colleges and universities. I have enclosed a copy of a letter from the President of the California State Employees Association, alleging discriminatory hiring practices in the University of California system. I would appreciate your keeping me informed as to the progress of your investigation.

With best wishes.

Sincerely yours,

EDWARD R. ROYBAL,
Member of Congress.

FREEDOM HOUSE,
New York, N.Y., October 11, 1974.

Representative JAMES G. O'HARA,
Rayburn House Office Building,
Washington, D.C.

DEAR CONGRESSMAN O'HARA: I have been instructed by the Board of Trustees of Freedom House to express our great interest in the revision of guidelines set forth by the Department of Health, Education and Welfare in administering Executive Order Number 11246.

At a meeting of the Board, followed by extensive communication on this subject, the attached statement on Affirmative Action was approved. It reflects Freedom House's effort—a tradition going back 33 years—to recommend a moderate, principled course of action on public policy matters.

The breadth of interests represented by the signators demonstrates, I believe, that the recommendations inherent in this statement are acceptable to a broad segment of Americans concerned with this issue.

We would be pleased to provide additional information at your request.

Very truly yours,

LEONARD R. SUSSMAN,
Executive Director.

FREEDOM HOUSE,
New York, N.Y., October 11, 1974.

Hon. CASPAR WEINBERGER,
Secretary, Department of Health, Education, and Welfare,
Washington, D.C.

DEAR MR. SECRETARY: I have been instructed by the Board of Trustees of Freedom House to express our great interest in the revision of guidelines set forth by the Department of Health, Education and Welfare in administering Executive Order Number 11246.

At a meeting of the Board, followed by extensive communication on this subject, the attached statement on Affirmative Action was approved. It reflects Freedom House's effort—a tradition going back 33 years—to recommend a moderate, principled course of action on public policy matters.

The breadth of interests represented by the signators demonstrates, I believe, that the recommendations inherent in this statement are acceptable to a broad segment of Americans concerned with this issue.

We would be pleased to provide additional information at your request.

Very truly yours,

LEONARD R. SUSSMAN,
Executive Director.

Enclosure.

AFFIRMATIVE NATIONAL LEADERSHIP TOWARD EQUAL OPPORTUNITY

Freedom House reaffirms its long-time commitment to "The most important unfinished business on the [domestic] agenda of the American people . . . the final dismantling of all vestiges of civil, social and economic discrimination against any citizen on grounds of race, creed or sex." [1]

Toward this end we strongly endorse the scrupulous enforcement of all Federal, State and local statutory prohibitions against discrimination in public and private employment, remuneration and promotion; in access to equal justice, education, housing, recreation and other rights and privileges of the individual as a citizen, regardless of race, creed, ethnic background or sex; and in any other area where public authority, in conspiracy with private prejudice, may yet be invoked to deny equal freedom and opportunity to any citizen.

---

[1] "Toward a New American Consensus," statement of the Board of Trustees of Freedom House, March, 1973.

We recognize, however, that the removal of old barriers and disincentives does not by itself create an equal-opportunity society, or convert a divided society into a whole one, where competition is truly based on merit. Opportunities are not equal for those members of minorities—blacks, Chicanos and other Hispanics, American Indians, and others—who are now disadvantaged competitively because of prior economic and social discrimination, inferior education and training, and the psychological scars of having had to live apart from the mainstream values, customs and even vocabulary of the dominant culture. To a lesser degree, prejudice and similar impediments exist for considerable numbers of whites who are consigned to fringes of the national economy because of their isolation in areas of endemic poverty (residents of rural Appalachia, for example, and regions dependent on dead or dying industries). To some extent, pockets of lingering social prejudice may continue to limit the educational and professional opportunities of still other whites such as Eastern European and Mediterranean minorities, Catholics and Jews. There are, too, the subtler, culturally ingrained prejudices which have for so long denied women in our society equal access to employment and equal pay and advancement.

The human costs of all these stubborn patterns of prejudice vary enormously from one ethnic group to another, and from one region or community to another. The most pervasive damage has no doubt been done to racial minorities, especially blacks and American Indians, whose separate and inferior civil, social and economic status has historically been enforced by law. Affirmative national leadership is needed to accelerate the movement of such individuals into America's mainstream.

If we are in time to become a society of genuine equality in rights, opportunities and privileges it will be because we shall have learned to treat all citizens equally, neither denying nor affording benefits on any basis other than individual merit.

Endeavoring to speed that day, federal administrators have created "affirmative action" programs. Some supporters of these programs acknowledge that various quota systems have been devised to favor minority or female applicants over better qualified white males; other supporters of affirmative action deny this has been done and say opposition to these programs is added proof of the society's resistance to any substantial improvement in racial equality.

We endorse those affirmative-action programs which require commitment to search for motivated individuals for acceptance in higher education and for jobs; individuals who, because of race, ethnic origin, sex, socioeconomic background or related reasons have until now had limited access to these opportunities. As a corollary we endorse grants, tax incentives, training subsidies and comparable devices to encourage remedial education and special training for individuals who require such support to bring their skills up to levels that are competitive with others who have traditionally had easier access to these same opportunities.

We emphatically reject, however, bureaucratic administering of affirmative-action "numerical goals" and "timetables" in the form of inherently arbitrary quotas which dictate statistical compliance by educational institutions, labor unions or private corporations on the mistaken presumption that a society of equality is one in which all definable groups within the society are represented in all educational disciplines, professions, labor organizations, jobs and levels of remuneration in precise proportion to the distribution of those groups within either the whole society or the particular community. Privileging or depriving certain groups in the past contributed to the inequities which the nation now endeavors to repair; we must not perpetuate arrangements which undermine constitutional guarantees of the rights of the individual citizen.

We also deplore any administrative response to affirmative action, whether in higher education or in industry or commerce, which dilutes academic, professional or technical standards in order to retain or certificate women or members of minority groups in order to inflate statistically the institution's apparent compliance with objectives of such programs. Such a course is hazardous to public safety, scholarship and professionalism, as well as demeaning to those who are presumably favored by such concessions.

We recognize that some admissions and qualifications tests are subject to cultural bias, and that those who enforce academic, professional and even technical standards are no more perfectly objective than are the codes they administer. Yet our common national goal must be not the falsified appearance of equality, but actually equality in terms of the best standards which all can accept. Thus it is proper to bend or waive admission standards to, for example, a college or university only if that institution is prepared to insist on whatever remedial, compensatory and supportive tutoring may be required to insure that every student who completes that particular program is graded and certificated by the same uncompromised scholarly standards.

Finally, we suggest that the goal of a single, integrated American society, where achievement and recognition are based exclusively on individual merit and performance, cannot be achieved separately from the structurally more fundamental goal of a social-political economy which is expansive enough to be able to utilize, fully and productively, the cultivable talents and skills of all its citizens. There can be no equality of opportunity in an economy in which the burdens of unemployment are high and unequally distributed. For example, poverty among blacks, the past five years, has increased, reversing a ten-year pattern of progress. The median income gap between black and white families, which steadily narrowed during the 1960's, has begun to widen and there has been a greater rise in unemployment among black than white workers.

For the already disadvantaged, initial access to higher education or a job or union membership is meaningless if funds and facilities are not available to help the needy take full advantage of that opening, or if no meaningful employment beckons at the end of his or her effort. Equality or opportunity can best be fulfilled by expanding the educational, employment and other places to which all citizens may aspire. Racial inequality cannot be exercised by bureaucratic manipulation or the enforcement of anti-bias guidelines alone. There must be a massive commitment to full employment.

Some romanticism and hypocrisy accompanied earlier dreams of American equality, but now on the eve of its 200th birthday, this nation is beginning to come to grips with the full meaning of the ideals expressed in the Declaration of Independence, that "all men are created equal" and that their equal and "unalienable rights" include "life, liberty and the pursuit of happiness." Remarkable but insufficient progress has been made so far toward realizing those ideals—the equal rights Constitutional amendments, the women's suffrage amendment, the *Brown* vs. *Board of Education of Topeka* decision of the Supreme Court, the civil rights legislation of the late 1950's and early 1960's, the painfully disputed but still significant progress toward school integration.

Much, much more remains to be done, and Freedom House vigorously supports an accelerated effort to put our troubled and divided past behind us, and to seek together a truly open and equal society in which the rights of the individual citizen, and his or her personal fulfillment, are recognized by all as basic to this democracy. Such a course, indeed, requires affirmative national leadership.

Prepared Statement of Barbara R. Bergmann, Member, Committee on American Association of University Professors, and Professor of Economics, University of Maryland

STATEMENT ON EQUAL PENSION BENEFITS FOR MEN AND WOMEN

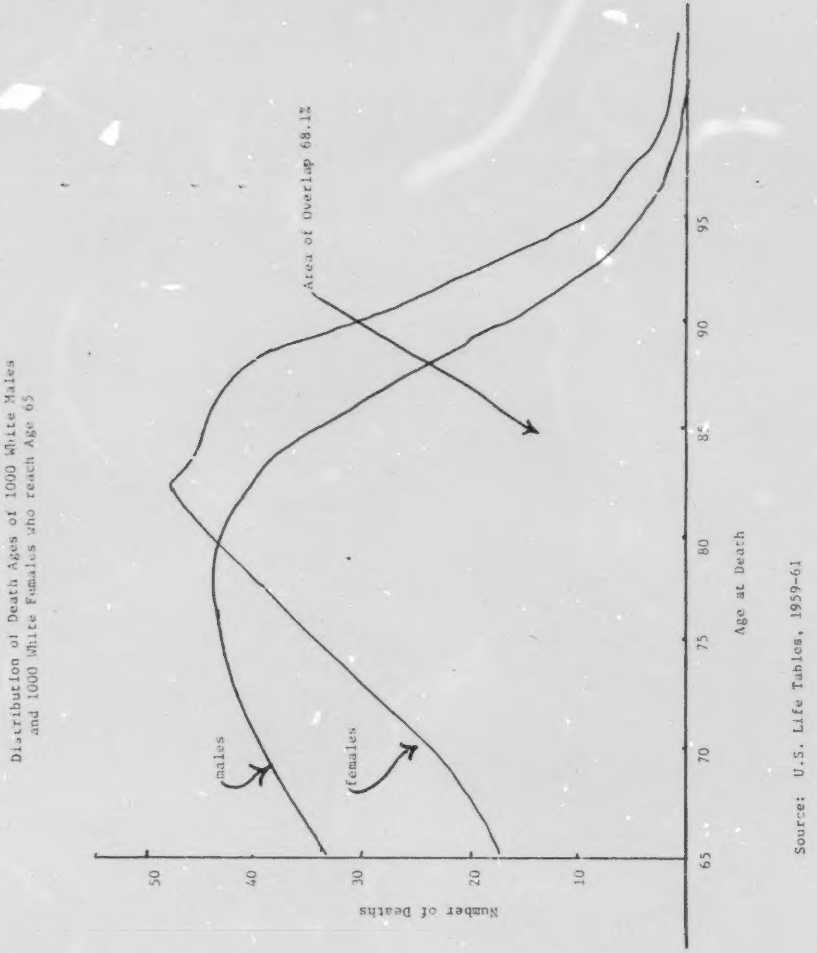
On April 27, 1974 at the Annual Meeting of the American Association of University Professors, an organization predominantly male in membership, the following motion was passed by a vote of 164 to 69:

> That the Sixtieth Annual Meeting of the AAUP direct the Council [of AAUP] promptly to take action to implement the principle of equal monthly retirement benefits for women and men faculty.

I offer these comments in furtherance of the action mandated by that motion.

Some employers, including many universities, are providing greater pension benefits for retired men employees than for retired women employees with equivalent work histories, forcing retired women into a lower standard of living as a result. This practice has been rationalized by reference to the greater costs due to the greater average longevity of women and to "actuarial soundness." We shall take the position here that allowing such practices to continue would be to permit discrimination which the Congress outlawed in Title VII of the Civil Rights Act, in the Equal Pay Act, and Title IX of the Education Amendments of 1972. We will argue that average greater longevity of women does not justify allowing employers to provide a lower standard of living for elderly retired women than elderly retired men, and that "actuarial soundness" can be achieved by other entirely feasible arrangements, arrangements which do not violate our sense of justice and the anti-discrimination laws of our country.

A great principle which has emerged from the anti-discrimination legislation is that it is no longer permissible for an employer to treat any particular woman as if she were "the average woman." The employer is no longer permitted to assume that any particular woman can lift no more than the "average woman" can lift, or assume she will stay on the job as long as the "average woman"s will stay, or assume that once on the job she will produce as much as the "average woman." Grouping people by sex when making decisions as to hiring, promotion, pay, or any other personnel action constitutes unlawful discrimination. An employer who wants to hire someone who will have to lift heavy objects is free to give all persons who apply a lifting test, but that employer is not free under the law to make the hiring decision on the basis of the conformation of the sex organs of the applicants. The fact of life which the law recognizes is that all men, are not, for purposes of work, different from all women; that there is a distribution of talents and propensities among men and another distribution of talents and propensities among women, and that these distributions, although not identical, do overlap. The "average" of the male distribution may be different than the "average" of the female distribution, but there are individuals in one distribution who have equivalent talents and propensities to individuals in the other distribution.



Distribution of Death Ages of 1000 White Males and 1000 White Females who reach Age 65

Source: U.S. Life Tables, 1959-61

FIGURE 1

As it is with talents and propensities, so it is with death ages. While the "average women" dies later than the "average man." there is considerable overlap in the distributions of death ages. If at a single point in time we were to pick at random 1000 men age 65 and 1000 women age 65, and follow them through and observe their death ages, we would find an overlap of 68.1 percent (see Figure 1). This means that we could match up 68 percent of the men with 68 percent of the women as having an identical year of death. This leaves 43 percent of the population, of whom 16 percent are men who die relatively early, unmatched by women's deaths, and of whom 16 percent are women who die relatively late, whose deaths are unmatched by male deaths.

Allowing employers to provide higher pension benefits for men than for women on the grounds of higher cost is to allow employers to assume that all men are like the "average man" and all women are like the "average woman" in terms of death age. It allows employers to arrange things so that the savings in annuity cost for the 16 percent of the population consisting of excess men who die early are entirely monopolized by men, 68 percent of whom are in the overlap group. The extra burdens imposed by the higher annuity costs of 16 percent of the population consisting of excess women who die late are entirely allocated by employers to women, 68 percent of whom are in the overlap group. This is "because" the conformation of the sex organs of men match those of the excess people who die early, and the sex organs of women match those in the excess people who die late. What is at issue is whether it is within the law to continue using the word "because" in this way in this context. We would argue that the law, which forbids using sex as a way of grouping employees, requires the sharing of these benefits and these costs over both sexes. Pension plans which group employees by sex constitute a denial of equal pay for equal work for the majority of the population which is in the overlap group.

The women in the large overlap group with lower pensions are, to say the least, in an unfortunate position. The considerable difference in their living standard is not even compensated for by the dubious utility of a longer life; they do not cost the system any more than men do; their only crime is that they have the same sex organs as the few people in the longer-lived group. This seems a slender reason to condemn them to a considerably meaner living standard than men. Public policy embodied in the anti-discrimination legislation requires that the burden of supporting the 16 percent of the population who are longer lived be shared by the entire population, rather than putting the whole burden on the 34 percent of the population who are like the long-lived group in sex organs but not in longevity.

Some employers, including many universities and colleges, purchase annuities for their employees from insurance companies rather than making pension payments directly. There are many ways these insurance companies might arrange their charges. They might (and for some purposes do) group men and women together, and, after consideration of the characteristics of the group they are insuring, charge an equal amount for each employee and promise to deliver equal monthly pension benefits to each. However, most private insurers will oblige the employer by offering to give the women employees less in terms of monthly benefits. This obliges the employer because it lowers the price the employer has to pay per employee from what it would be if all employees got the same benefit. As long as it is permissible for employers to seek to purchase such a package they will find insurance companies who will be glad to oblige them. The cost is lowered for the employer, and the buck is passed to the insurance company to do the discriminating. The pretext is the greater dollar cost of servicing the "average woman." This pretext is illegitimate for the employer to use in the context of salary, or hiring or promotion. There is no reason to permit its use in the field of pensions or fringe benefits generally.

Does the fact that the pension may be purchased, rather than being provided directly by the employer, alter the employer's obligation under the law not to treat each woman as the "average woman?" If it did, then, by the same logic, employers might contract out the provision of many other fringe benefits to firms who would charge the employer the same per employee regardless of sex, yet provide lower benefits to the woman on the pretext of higher average cost of servicing the women. Even the payment of wages might be contracted out in this way, and differences justified by reference to different "costs." There is no end to the possible ingenuity of employers in maintaining differences in compensation to men and women if employers were permitted to escape the mandate of the anti-discrimination laws by passing the buck. An employer who purchases the provision of fringe benefits from outside organizations which provide unequal benefits by sex is discriminating as much as if he provided unequal benefits directly.

The use of pensions as a discriminatory device is made crystal clear by the practice of many universities and colleges in treating death benefits and pension annuities in an inconsistent manner. In the case of benefits for death before retirement, higher mortality of the "average man" and the higher costs it entails are ignored and men and women are frequently given the same benefit. In figuring death benefits, men are frequently given the "advantage" of averaging out men's and women's mortality. The same university may then turn around and again give men the advantage in retirement benefits by *failing* to average out men's and women's mortality. If the university (and the insurance organization which sells them the policy) were truly interested in costs as a basis for the distribution of fringe benefits, it would not act in this inconsistent manner. We would assert that what the university and the insurance organization which services it are interested in is rather taking advantage of women's weak position in a discriminatory labor market to deny them the full measure of benefits the university gives to men. To lay down guidelines which would countenance this kind of behavior under the anti-discrimination laws would be to make a mockery of those laws.

Let us turn now to the issue of "actuarial soundness." The point we wish to make is that there are numerous ways of achieving "actuarial soundness." Certainly a system is financially sound if the total of discounted costs equal the total of discounted benefits, plus some margin for administration, deviations from past experience, etc. This may be achieved by splitting up the population for rate-making purposes into many small groups or into a few big groups, or keeping the entire population in one group. For example, it would be actuarially sound to split up the population into different rate-paying groups, the assignment of individuals to groups depending on blood pressure, number of cigarettes smoked in previous years, number of relatives dead of cancer, and the like. Or it would be equally sound actuarially for the law to mandate keeping the whole population in one group and charging each the average cost of servicing the entire population.

Which division of the population for insurance purposes, if any, should be encouraged by public policy? There are some forms of group-splitting which encourage desirable behavior and which are reasonably protected by public policy. Charging owners of frame houses more than owners of brick houses for fire insurance encourages the choice of safer building material. Charging accident-prone drivers higher auto insurance premiums encourages safer driving. Charging older people more for term life insurance than younger people encourages young people, whose need for insurance is greater, to purchase adequate amounts. But there is no desirable behavior which is encouraged by splitting up the population by sex and charging more for annuities for women than for men, and therefore no public interest in allowing such a split. On the contrary, splitting the population by sex for pension purposes is a device for allowing employers to discriminate against women, which is against public policy.

We have outlawed discrimination in hiring, promotion and in wages and salaries. To allow the continuation of discrimination in the delivery of fringe benefits through lower pension benefits for women would be to enshrine for no discernible reason the last vestige of a discriminatory system.

LONG ISLAND UNIVERSITY,
Brooklyn, N.Y., October 9, 1974.

Congressman JAMES G. O'HARA,
Chairman of Special Subcommittee on Education,
Washington, D.C.

DEAR CONGRESSMAN O'HARA: This letter is in reference to Executive Order 246 1907 Title Six Civil Rights Act. I wish to add my voice in protest against the affirmative action program now being implemented by HEW. I speak as an academic; that is, as one concerned with the highest possible achievements in both the traditional and newer academic disciplines, and with the opportunity to our students and citizens to attain such achievements. Here there are two points that must be immediately distinguished and explained.

The first is that of opportunity. No one potentially capable of achievement should be denied every recognizable opportunity to strive for this achievement. It is well recognized that there are many problems to be dealt with here. We are concerned with the home and with the social environment, including the quality and the availability of adequate primary and secondary school education. These have their own diagnosis and their own remedies. It is of the greatest importance both for the sake of everyone concerned, both of minority and majority persuasion that these be pursued to the limit. The second point is concerned with post-secondary education itself. The immediate aim of post-secondary education to the degree that it especially impinges upon institutions of higher learning such as universities and advanced technical schools has to do with advanced training and mastery in recognized fields. While the fruits of such education are made use of by the community at large, the standards are set within the institutions and by the disciplines and the professions immediately concerned, as well as by the States. The States, however, while they may set standards of opportunity, may never unilaterally promulgate professional and qualitative standards. Entrance can only be on the basis of merit. Any lesser qualification or shifting of authority which set such standards can serve only to degrade and to debase. It degrades society in its work, it debases the individual both in his estimation of himself and of others. If he is admitted to an institution of higher learning by way of any criterion other than that of merit, he will become aware that he is not what he appears to be and must in the end either fail, lower necessary standards or deny to others their own rightful opportunities. One injustice is never eliminated by another.

The nature of all advanced academic work is such that it always requires specific training, specific abilities and specific masteries. The way to these has been and always must be sex-neutral and color-blind. I may add in conclusion that inferior achievement not only lowers the individual but harms the country, and this in today's world where the country for its own welfare and security must preserve and advance every bit of good and quality that it can. Affirmative action must not and cannot affirm duel standards. The setting of appropriate standards is the work primarily of competent experts. It is the business and duty of the State as it is that of all of us, however, to make sure minority representations are included in the pool of persons to be given all opportunity and to make it possible to be selected, promoted, accepted and chosen, always subject to the limit of appropriate and objective professional standards. It is the duty of the individual and the State to do this to make it possible to secure and establish suitable and appropriate conditions and opportunities for qualification. Proved individual merit must always remain the final qualification.

Sincerely,

LINCOLN REIS.

THE CITY UNIVERSITY OF NEW YORK,
New York, N.Y., October 11, 1794.

Mr. WILLIAM A. CAREY, Esq.
General Counsel, Equal Employment Opportunity Commission,
Washington, D.C.

DEAR MR. CAREY: It has come to my attention that on or about September 16, 1974, the Equal Employment Opportunity Commission ("EEOC") submitted a motion for leave to file a memorandum *amicus curiae* in support of plaintiffs' motion for a class action in *Melani* v. *Board of Higher Education of the City of New York*, 73 Civ. 5434, with the Clerk of the United States District Court for the Southern District of New York. The papers were signed by a staff attorney of the EEOC in Washington, D.C. The *Melani* case is a purported class action brought by and on behalf of the women members of the instructional staff pursuant to 42 U.S.C. Section 2000e, alleging discriminatory employment practices on the basis of sex. To the best of my knowledge, the EEOC has never investigated or attempted to conciliate the claims of the 27 individuals named as plaintiffs in this action.

In the first paragraph of the EEOC's motion papers, it is asserted that the EEOC is requesting "leave to file the annexed brief an as *amicus curiae* in support of the plaintiffs in response to the motion to dismiss filed by the Board of Education of the City of New York." It should be noted that the Board of Higher Education, the defendant in the action in question, has not filed a motion to dismiss and the above statement in the EEOC's papers is one of many unfounded misrepresentations contained therein.

On page 12 of its memorandum of law, the EEOC states "the Board's policy of doing virtually nothing, in the face of the overwhelming evidence of blatant sex discrimination with which it has long been confronted, can be viewed as willfully contributing to the continuation of that practice." Without having investigated the complaints of the named individuals and without having familiarized itself with the facts and circumstances involved in the Federal court action, it is difficult to understand how the EEOC could have reached this conclusion, let alone be prepared to file such a statement with the Court. As a public agency charged with the evenhanded enforcement of the law, the EEOC must be held to a higher standard of responsibility than that evidenced in this case. A serious question is raised as to the ability of the EEOC to process matters relating to City University fairly in the future.

I hope that you will use your good offices to look into this matter so as to correct the situation.

Sincerely,

ROBERT J. KIBBEE, *Chancellor*.

THE CITY UNIVERSITY OF NEW YORK,
New York, N.Y., October 11, 1974.

Mr. JOHN H. POWELL, Jr.
Chairman, Equal Employment Opportunity Commission, Washington, D.C.

DEAR MR. POWELL: It has come to my attention that on or about September 16, 1974, the Equal Employment Opportunity Commission ("EEOC") submitted a motion for leave to file a memorandum *amicus curiae* in support of plaintiffs' motion for a class action in *Melani* v. *Board of Higher Education of the City of New York*, 73 Civ. 5434, with the Clerk of the United States District Court for the Southern District of New York. The papers were signed by a staff attorney of the EEOC in Washington, D.C. The *Melani* case is a purported class action brought by and on behalf of the women members of the instructional staff pursuant to 42 U.S.C. Section 2000e, alleging discriminatory employment practices on the basis of sex. To the best of my knowledge, the EEOC has never investigated or attempted to conciliate the claims of the 27 individuals named as plaintiffs in this action.

In the first paragraph of the EEOC's motion papers, it is asserted that the EEOC is requesting "leave to file the annexed brief as an *amicus curiae* in support of the plaintiffs in response to the motion to dismiss filed by the Board of Education of the City of New York." It should be noted that the Board of Higher Education, the defendant in the action in question, has not filed a motion to dismiss and the above statement in the EEOC's papers is one of many unfounded misrepresentations contained therein.

On page 12 of its memorandum of law, the EEOC states "the Board's policy of doing virtually nothing, in the fact of the overwhelming evidence of blatant sex discrimination with which it has long been confronted, can be viewed as willfully contributing to the continuation of that practice." Without having investigated the complaints of the named individuals and without having familiarized itself with the facts and circumstances involved in the federal court action, it is difficult to understand how the EEOC could have reached this conclusion, let alone be prepared to file such a statement with the Court. As a public agency charged with the evenhanded enforcement of the law, the EEOC must be held to a higher standard of responsibility than that evidenced in this case. A serious question is raised as to the ability of the EEOC to process matters relating to City University fairly in the future.

I hope that you will use your good offices to look into this matter so as to correct the situation.

ROBERT J. KIBBEE, *Chancellor.*

MICHIGAN STATE UNIVERSITY FACULTY ASSOCIATES,
Lansing, Mich., October 11, 1974.

Hon. JAMES G. O'HARA,
Washington, D.C.

DEAR CONGRESSMAN O'HARA: I am writing to you to express my strong support of previous congressional efforts to strengthen affirmative action type programs in our various colleges and universities, as reflected, for example, in the language of Title IX of the Higher Education Amendments of 1972.

It has been brought to my attention, however, that the proposed Holt Amendment to HR 16900, the supplemental higher education appropriations measure now before the Special Subcommittee on Higher Education and Civil Rights Obligation, if adopted, would have the effect of seriously weakening such gains in admissions and employment of women and minorities as have been made under present law.

For this reason, therefore, I wish to go on record in firm opposition to passage of this Amendment.

During the past year I had the honor to serve as Chairperson of the Higher Education Subcommittee of the Michigan Democratic Party's 1974 Platform Policies Study Committee. As you no doubt know, in adopting the several recommendations offered by the Subcommittee, the Michigan Democratic Party evidenced a commitment to and strong support of affirmative action type programs and policies in higher education.

Consequently, I urge you to uphold this action of the Party and exert all possible force and influence to defeat the Holt Amendment and any other efforts to negate the general improvements made by both women and minorities under present statute.

Sincerely,

GLADYS M. BECKWITH, *President.*

AMERICAN ECONOMIC ASSOCIATION,
COMMITTEE ON THE STATUS OF WOMEN IN THE ECONOMICS PROFESSION,
SOUTHERN METHODIST UNIVERSITY, *October 14, 1974.*

Hon. JAMES G. O'HARA, *Chairman,*
Special Subcommittee on Education,
Washington, D.C.

DEAR CONGRESSMAN O'HARA: On behalf of the American Economics Association Committee on the Status of Women in the Economics Profession, I strongly encourage that the Affirmative Action provisions of the Higher Education Act be maintained and strengthened.

Our Committie was organized in response to a unanimously-passed resolution of the American Economics Association and is now a Standing Committee. Our purpose is to devise programs and procedures to increase the opportunities for women economists and bring them into the system of management. Through research and discussion, we have become increasingly aware of the inequality of opportunity for women economists at Universities in particular. (See attached 1972 press release.)

We see affirmative action programs at universities as an integral part of the process of increasing the supply of women economists and improving the quality of education for women on university campuses.

Enclosed is a copy of our stated guidelines to obviate role prejudice and sex discrimination which were published in the attached article from the December. 1973 *American Economic Review*. Many of these guidelines parallel those of the Federal Government and Revised Order 4.

I will appreciate this letter being made a part of the Record of the Hearing on this matter.

Sincerely,

BARBARA B. REAGAN,
Chairperson and Professor of Economics, Southern Methodist University.

Enclosures.

COMBATTING ROLE PREJUDICE AND SEX DISCRIMINATION—FINDINGS OF THE AMERICAN ECONOMICS ASSOCIATION COMMITTEE ON THE STATUS OF WOMEN IN THE ECONOMICS PROFESSION[*]

I. ROLE PREJUDICE AS AN ECONOMIC PROBLEM[1]

It is less well recognized that discrimination among existing members of the labor market creates a general economic loss. Where certain people are excluded from jobs for reasons which have nothing to do with the performance of the jobs themselves, the loss to consumers plus the loss to those who are excluded is greater than any gain to those who are favored. There is now copious literature on this subject.

It is less well recognized that discrimination among existing members of the labor force is only a special case of a much larger process of role learning and role acceptance, which begins almost from the moment of birth. It is not merely that differences in skills are learned, as in Adam Smith's famous passage about the porter and the philosopher,[2] but images of possible roles on the part of both the role occupants and the role demanders are likewise learned in the long process of socialization. The existing division of labor at any one time, therefore, may reflect "role prejudice"—that is, a learning process by which certain irrelevant biological or genetic characteristics of individuals are associated with certain roles. Some genetic distinctions are significant for role performance, but many are not and yet are widely believed to be significant. These beliefs are products of a false social learning process, which can be a source of economic loss even larger than false discrimination within an existing labor force. Discrimination in an existing labor force indeed emerges as one consequence of the much larger process of the development of role prejudice.

---

[*] This report is published pursuant to a resolution adopted by the members at the Annual Meeting of the American Economic Association, December 28, 1971. In providing for establishment of the Committee on the Status of Women in the Economics Profession, the resolution specified that "Its general findings, conclusions, and recommendations shall be published by the American Economic Association upon the Committee's request" (*Amer. Econ. Rev. Proc.*, May 1972, p. 474). This report has not been considered or approved by either the Executive Committee or the membership.

[1] Part I was drafted for the Committee by Kenneth E. Boulding, professor of economics, University of Colorado.

[2] "The difference between the most dissimilar characters, between a philosopher and a common street porter, for example, seems to arise not so much from nature, as from habit, custom, and education" (p. 15) Adam Smith.

Role prejudice tends to develop when there are genetic differences in the human population which are visible but are not necessarily significant for role performance. We see this clearly by considering those genetic differences which are undetectable except by refined methods and therefore are socially invisible. Some of the blood types are perhaps an example. In ordinary life we are quite unaware of a person's blood type. Consequently, it can be safely assumed that there is no role prejudice against blood types of different kinds, unless these happen to be associated with other characteristics which are socially visible. For the major types, this association is fairly minimal. Consequently, we would be very surprised to find a distribution of blood types in any occupational group or income group of any size which is markedly different from the distribution of blood types in the population as a whole.

For any particular distribution of genetic characteristics, it is clear that we can postulate "no-prejudice proportions" in all the different occupations and structures of society. In the case of the socially invisible and irrelevant characteristics mentioned above, the no-prejudice proportions, subject to random variation, in any group of society would be expected to be the same as the proportion of the characteristics in the society as a whole. If there were any case—and I must confess I have not been able to think of one—of a genetic characteristic which is relevant to role performance but which is socially invisible and not in the information system, then the existing structure of proportions of the characteristics in different occupations might not be the same as the proportions in society as a whole, and those occupations which this invisible characteristic favored would have a larger proportion than in the society as a whole, but this would still constitute a no-prejudice distribution. Paradoxically enough, without knowledge there can be no prejudice; without some knowledge, there can be no false knowledge.

Role prejudice may easily arise where there are highly visible and observable genetic characteristics, such as sex, race, height, size, color, and so on. Historically these have frequently been perceived as having some relevance to performance in different roles. But this relevance tends to be exaggerated, because a rational tendency to economize information can easily turn into an irrational process of stereotyping and false knowledge.

The genetic division of the human race into men and women qualifies in most societies as the major form both of discrimination in the existing labor force and of role prejudice. This is not surprising, as the genetic difference between the sexes is far greater than it is among the races in terms of the structure of information of the genetic code. There is one role indeed—that of bearing children—in which there is 100 percent genetic specialization between the sexes, in the sense that no men will be found in the childbearing population. The very social visibility of the distinction between the sexes, however, makes it a prime candidate for role prejudice, which creates a huge reservoir of false knowledge, false education, and false learning processes. All are costly to society in exactly the same sense that an unknown and unutilized natural resource is costly in the sense of opportunity foregone. We can, oddly enough, think of role prejudice as a large natural resource which can be mined by the development of true knowledge and better learning processes to the benefit of the whole society.

Where the sex distinction is completely irrelevant to role performance, role prejudice can be said to exist wherever there are substantial deviations from the 50 percent rule—that is, 50 percent of each sex in the occupation—this being assumed to be the proportion of the sexes in the total society. The difficult case, of course, is where there is some genetic foundation for partial role differentiation. It is the cases between the 50 percent and 100 percent that are difficult, and in these cases there is often no information system—at the moment at any rate—which can inform us as to the exact proportion of the sexes in different occupations which constitutes zero role prejudice. Fortunately, however, we do not have to know where the exact position of the ideal proportion is if the existing proportion clearly represents a gross disproportion. In order to set up a social policy we do not have to know exactly where the ideal lies. We merely have to identify those cases in which the deviation from the ideal is so clear and striking that we can find wide agreement as to the desirable direction of change. At the bottom of the mountain, one knows which way is up, even though one may not know exactly where the top of the mountain lies. Maximizing is an illusion, but betterment is not.

It is the contention of the American Economic Association Committee on the Status of Women in the Economics Profession (the Committee) that there is gross disproportionality in the proportion of women to men in the economics profession, and especially in university teaching, as revealed in the data which have been collected. Fortunately, we do not have to argue whether the genetic differences between women and men would result in a non-prejudice proportion of women in economics of 40 percent or 50 percent or 60 percent when the actual proportion is less than 10 percent. This gross disproportionality, of course, arises from sources in the long history of the human race, most of which are outside the economics profession. This, however, does not excuse the economics profession from setting in motion processes which will raise its proportion of women. We are a sector of the knowledge industry and a group of people concerned with eliminating sources of unnecessary economic loss. Only if we are successful beyond our wildest expectations, considering the vastness of the mine of ignorance and false learning, will it be necessary to raise the question as to whether we have gone too far.

The critical question, therefore, is that of the "betterment production function," as it might be called. The social indicator of betterment is in this case clearly an increase in the proportion of women in the profession, especially in those branches where the proportion is least. If the rate of change of this proportion is regarded as the product, the question is: What are the inputs which produce this output, and particularly, what are those inputs that can be most easily expanded and that have the highest marginal productivity? We might also look at those inputs which have a high negative marginal productivity and which can be contracted. Four broad classes of inputs may be named: Information, Persuasion, Rewards, and Punishments.

1. Information

Information properly organized changes the images of the world of people who receive it and consequently changes their behavior. There are two aspects of the information process—theoretical structures and information about fact. Better theoretical structures are an essential ingredient in the advancement of knowledge, and in this particular case it is important that the theory of role prejudice, as outlined above, should be widely recognized as a legitimate extension of economic and social theory. One of the greatest enemies of the fact of prejudice is the spread of the idea of prejudice. Once it is recognized as a theoretical construct, the facts of perverse social learning which previously have been invisible become glaringly visible. The improvement and elaboration in detail of the theory of role prejudice is still an important task for the future.

Coupled with a wider appreciation of the theory, the development of statistical information, case studies, and a continuing series of social indicators can serve as a constant criticism of what is false in existing theories of the world and a reinforcement of what is true. It is tempting to think of every advance in knowledge as the result of a combination of new theoretical insights with new information collection and processing procedures. In social systems, however, knowledge does not merely reflect the world—it changes it. And in this case particularly, the more we know about role prejudice, the less there is likely to be. Getting lost is one way to improve one's knowledge of the terrain, but studying a map is a better way, and diminishes the amount of getting lost.

2. Persuasion

The mere existence of knowledge and information is not always enough to insure its spread. One of the major sources of ignorance is inattention, and to insure the spread of new knowledge it is often necessary to call it to the attention of people in ways which are dramatic and persuasive. The fact that persuasion can be abused to propagate false knowledge does not excuse us from its proper use in the propagation of truth. Persuasion plays a particularly important role in the change of values, and without getting into the ancient controversy about the truth of values one has to recognize that change in our image of the world inevitably changes our values about it. As scientists, we have to guard against the information filter which our values create. We cannot pretend, however, that information is value free. Change in knowledge and change in values are joint products of a single process.

A problem of particular difficulty is that of irrelevant and unconscious sources and attitudes, even in the academic and intellectual community, which is supposed to be on its guard against irrationality. The relations between the sexes are often characterized by high levels of emotion, and hence are particularly subject to the distortions which arise from unconscious or irrelevant sources. It is one of the functions of ethical persuasion to raise our awareness and to set up defenses against attitudes and prejudices which arise from this source.

3. Rewards

It is widely recognized in the learning process that positive and negative payoffs are of great importance. Every economist is familiar with the proposition that any human activity which is rewarded above some neutral level will expand and those rewarded below this level will contract. The structure of knowledge and values in the human mind, likewise, grows towards its own more positive payoffs and away from the less positive and negative payoffs. It is by constructing a reward structure that society is most likely to achieve change. These rewards may be either internal or external. Our own applause, as Paul Samuelson suggested, may indeed be the greatest reward of all. No economist, however, can deny the significance of external reward, whether the applause of others or those more tangible things, such as subsidies, tax remissions, and price changes. Curiously enough, although psychologists seem to agree that rewards are more successful than punishments in the learning process, it seems harder to legitimate a reward structure. A suggestion, for instance, that dues paid by members of the American Economic Association should be scaled down if the organization or department to which they belong had a high proportion of women might be hard to legitimate, even though it might be effective. Nevertheless, the search for reward structures should go on.

4. Sanctions and Punishments

Punishments always seem to have been easier to legitimate than rewards, perhaps because of a belief that they are cheaper, in spite of much evidence that they do not contribute as much to learning. Nevertheless, there is one extremely good reason for the use of sanctions. In the case of public goods and public bads it is well recognized by economists that legitimated threat of some kind is essential if we are to avoid some "tragedy of the commons." Private reward structures, such as the market and the price-profit mechanism, are particularly well adapted to the provision of private goods, but are poorly adopted to public goods, where without some sanctions in the collection of taxes public goods would simply not be provided in adequate amount. Private reward systems are also poorly adapted to dealing with public bads such as pollution, of which role prejudice is a prime example, in the sense that everybody is somewhat diminished by it. The "freeloading principle" applies here, for if there are no sanctions it will pay the individual not to participate in a collective sacrifice required for the increase of a public good or the diminution of a public bad. To rely on purely private rewards and exhortations for the diminution of role prejudice is rather like trying to finance a government with purely voluntary contributions.

To say that sanctions are necessary does not mean to deny that there are acute problems both in the quantity and the quality of sanctions, and that bad sanctions might be worse than no sanctions. This, however, does not excuse us from the search for good sanctions, which must not be larger than necessary, must be credible, legitimate, precise, equitable, and so on. Sanctions should fall on violators and not on the innocent; they should be appropriate—that is, any punishment should fit the crime—and it should be recognized that, like all deterrents, punishments are most successful when they are not carried out. Economists will recognize, however, that no system of sanctions can be perfect and that there has to be some kind of tradeoff between imperfection in the system of sanctions which will inevitably lead to some failures of both justice and of deterrence, and the failure of the provision of public goods or the elimination of public bads which too weak a system of sanctions might involve.

The power of the American Economic Association to invoke sanctions is small indeed, and it could be argued that, apart from publicity—which under some circumstances is itself a sanction—a professional association should not legitimately engage even in linguistic sanctions like censure. Nevertheless, it is only realistic to be aware of the fact that sanctions of government can be invoked by groups in the society in the furtherance of what they believe to be general betterment. Even a profession is not exempt from participating in the society of which it is a part. It is important that vigilance be maintained against both the abuses of sanctions and their undue neglect, even though the primary emphasis of the intellectual community is properly on information, persuasion, and rewards.

The Committee is aware that it has a special task which is part of a much larger social process. Role prejudice in particular is by no means confined to women. Men also suffer from role prejudice, and it accounts for other kinds of discrimination than one based solely on sex. Nevertheless, as economists we believe in the division of labor and we believe that the pursuit of our particular task is to complement rather than compete with the labors of others in the long process of social betterment. The guidelines that we are proposing, while they are particularly applicable to our special case, are all simply examples of the fundamental general principle—that where there is clearly not enough, the simplest and most necessary guideline is "more." In what follows we spell out in detail this essential principle.

II. GUIDELINES TO OBVIATE ROLE PREJUDICE AND SEX DISCRIMINATION [3]

The following guidelines are written for members of the American Economic Association who, as faculty members in departments of economics in various colleges and universities, as economists in business, industry, or government, wish to remove, mitigate, or prevent discrimination against women economists. These suggestions have been prepared by the Committee to illustrate steps that can be taken by those of good will who seek to comply with the spirit as well as the letter of laws proscribing employment discrimination. Over time, other suggestions may be appropriate; and the guidelines may need amendment or modification to reflect changes in the conditions of employment faced by women economists.

Not all institutions will wish to implement all the recommendations given here. Nevertheless, thoughtful consideration of whether a particular suggestion has merit for a given institution may reveal needs heretofore unrecognized and may be the basis for setting in motion policies that will eliminate sources of discrimination and unnecessary economic loss.

Because many members of the American Economic Association will wish to review again the resolutions relating to elimination of sex discrimination among economists that were passed by the Association at the annual meeting in December 1971 at New Orleans, the resolutions are repeated here.[4] They provide the framework for the Committee's guidelines for positive policies and remedial action to obviate role-prejudice directed against women economists.

I. Resolved that the American Economic Association declares that economics is not exclusively a man's field. The Association herewith adopts a positive program to eliminate sex discrimination among economists, whether employed in universities and colleges, industry, finance, publishing, or other endeavors. The President shall make known, by all available means, the Association's adoption of the following principles:

> (a) To redress the present low representation of women in the economics profession, the Association shall actively encourage the study of economics by women at all levels of education.

Low representation of women in the economics profession occur in part because women students do not have appropriate role models at the university nor in visible positions in other places of employment. Women also lack accurate information and encouragement throughout the entire educational process. The role models needed are professional women economists with whom young women can identify and from whom young women can obtain information and counseling. It is also important that young men in the classroom recognize, as a matter of course, that professional women play a vital role in economics as well as other fields, and that professional competence among adults should not be sex-related. Throughout their entire training, children, both boys and girls, should have opportunities to appreciate the economic contribution of women to our society, and the economic circumstances of discrimination against women. By the time young women have completed high school, they should know that job planning is essential for everyone and should understand that economics is a perfectly appropriate field of study for women.

There are numerous things that economists can do to encourage the changes needed to overcome previous false social learning.

---

[3] Part II was written by Barbara B. Reagan, professor of economics, Southern Methodist University, on behalf of the Committee. These guidelines reflect the input and discussion of all Committee members as well as public discussion in Toronto at the December 1972 meetings of the American Economic Association.

[4] The resolutions are contained in the Appendix to the minutes of the annual meeting, pp. 473–74.

(1) *Educational Institutions.*—The value of women faculty role models at the college or university level cannot be stressed too much. A substantial amount of talent that would otherwise flow into this profession is lost because, without the presence of women faculty, undergraduate women erroneously assume that economics is a profession for men only. An exclusively male department also lacks the abilities to correct these impressions, not least because men economists themselves overlook the difficulties subsumed under the cliché "economics is a man's field." A woman economist can provide encouragement and proof that it is possible not only to survive but to accomplish, even as a member of a tiny minority group. The positive role that women faculty can play in enhancing the education of both women and men should be considered in making appointment decisions.[5]

Departments should also use other methods of making women more visible—inviting guest lecturers (for example, women from government, industry, management, finance, public action programs, research), hiring women visiting professors, featuring women in career opportunity conferences, using women as special lecturers, recommending women experts when students want someone with whom to consult, and including women economists in informal gatherings of economists. Again, these are ways of doing away with role prejudice.

Departments should facilitate communication between senior women economics majors and freshmen women so that the latter may be appropriately informed and encouraged to study economics. Whenever possible, communication between women graduate economics students and women undergraduate majors should be similarly facilitated.

(2) *Government.*—Part of the lack of role models for potential women economists has arisen because the government at all levels has put little effort into appointing women economists to highly visible positions. Economists should work to increase the number of women economists in high ranking positions in the federal and state governments to serve as examples and encouragement to women facing career decisions.

The federal government, as part of the Federal Women's Program, should require that women be given equal opportunity in government-financed graduate student programs and should encourage women in such programs to study economics.

(3) *Private Industry.*—Private industry should search for women economists in order to place them in both research and administrative positions. The reciprocal employment relationship between industries and universities (and/or consulting arrangements) should be encouraged for women economists as it has been for men.

Training of mid-career women economists already employed in the private sector should be encouraged. Both full- and part-time training and educational opportunities should be made available to women economists, as to men, to enable them to acquire new skills and improve their status.

(*Resolution Ib*) No academic institution or department shall discriminate against women in admission to studies in economics or in the form or amount of financial aid. Every economics department shall actively encourage qualified women graduate students without regard to age, marital or family status, and shall actively promote their subsequent employment.

(1) *Admissions.*—The admissions process should be checked by economics departments to ensure that there is no discrimination on the basis of sex, age, marital, or family status. In efforts to eliminate or preclude such discrimination, whenever possible, women faculty or graduate students should participate in the admissions process. When prospective candidates for admission are interviewed, women applicants should not be asked questions about marital or family status (actual or prospective) that are not asked of men.

(2) *Recruitment.*—Because the applicant pool is often low, departments of economics should actively recruit women into their programs at both the graduate and undergraduate levels. Women graduates of the department form a good supplement to such recruiting efforts. To give evidence of career opportunities, departments might keep a file of letters from former economics majors on their experiences with further academic training and/or the labor market.

---

[5] Elizabeth Tidball has established a correlation between the number of women faculty at a school and the number of women students who subsequently attain recognition for their achievements, using a random selection of listings in *Who's Who of American Women* for a three-decade period. The statistically significant positive correlation coefficient was +0.953 with $P<0.005$. By contrast, "the number of men faculty neither enhanced nor detracted from the output of women achievers."

Whenever possible, women graduates from the department should be invited back to give lectures. When recruiting graduate students, particular attention should be paid to institutions from which large numbers of qualified women may be recruited; such places may include state and city colleges and women's colleges. Letters to colleagues teaching undergraduates should publicize the department's interest in women applicants. When considering applications, women with undergraduate preparations that are closely related to economics should also be considered.

(3) *Financial Aid.*—When faculty members or department chairmen are making decisions with respect to the size of grants or fellowship aid for various graduate students, marital status should have no relevance. In particular, married women should be treated in the same way as married men. Under no circumstances should it be assumed that a married woman's needs are less than a man's without due consideration of the financial facts involved.[6]

Information on sources of fellowships and grants should be distributed so that all students, both men and women, receive the information on an equal basis. When departments are asked to make nominations for financial aid, qualified women should be included.

Federal scholarship and loan programs should actively seek out women graduate students as potential recipients and should inform all departments of their interest in women applicants.

(4) *Encouragement in the Program.* Those departments that at present have no women faculty members should make special efforts to schedule guest lectures by women economists so that graduate students will be more aware of the active participation of women in the field. Faculty should include publications of women economists on reading lists, particularly in basic courses.

(5) *Placement.*[7] In writing recommendations for prospective employment, economists should not include comments on physical appearance; such comments are not relevant in evaluation of a candidate's qualifications for employment. In particular, care should be taken that comments on physical appearance are not used differentially in evaluating female and male applicants. References to so-called "feminine" or "masculine" traits should be omitted. Marital status, number of children and other private facts of a candidate's life should not be assumed to affect a person's ability to meet professional obligations. Comments regarding political views, particularly the Woman's Liberation Movement, are appropriate only insofar as they are relevant to the applicant's field of research or scholarship.

Care should be taken not to use traditional sex-related stereotypes—downgrading women for conforming to the "passive-accepting" model, or condemning women as unduly "aggressive" for competing to a degree well within the bounds of normal behavior set by their male colleagues for themselves. The latter type of participation may seem unduly aggressive only when measured against a passive, accepting stereotype of the feminine role, but not when measured against professional standards.[8]

---

[6] A relevant court case in 1971 involved John and Mary:

". . . high school sweethearts who married shortly after graduation. Mary went to work for a bank in a small city in Northern Indiana. John worked as a salesman in the same city. Mary prospered, was promoted, and eventually became a cashier. John did less well. Growing restless, he enrolled in college, using Mary's earnings as the basis of his support. Eventually he graduated with a Master of Science degree in Science Education and entered the teaching profession. In college, and after graduation, reportedly because of college experiences, John claims that he grew intellectually and socially while his wife stagnated. Finding Jane, a fellow teacher, more compatible, he fell in love and pursued an affair with her. Mary sued for divorce and claimed as part of her settlement the present value of the college education of her 41 year old male Caucasian husband, the value of which was computed at $49,653. In the face of this suit John saw Mary in a new light. They were reconciled."

(This information was provided to the Committee by David R. Witmer, Assistant Chancellor, University of Wisconsin-La Crosse.)

[7] Although these comments are written with respect to recommendations for and placement of women graduate students, they apply equally to placement of women economists in subsequent stages of their careers.

[8] "Women candidates, to win entire approval, have to be both chic and brilliant, and so the woman who is plain-looking, a spinster-scholar type, evokes a negative response for she is not a complete woman, she lacks sociability and will not flatter the egos of male department members. Dossier after dossier divulges irrelevant, negative commentary: '—is a large broad-boned, somewhat awkward young woman who must be close to six feet in height,' 'her mousiness belies a sharp mind'; '—is . . . tall and proportioned like an Olympic swimmer'; 'she is a steady woman who will never marry.' And within a single paragraph from a male at an elite graduate school; she has a 'comfortably upholstered' person and personality, she performed 'athletically' in a particular course, she would be the 'wheelhorse' of any committee on which she served. And of an older woman, 'if she has any faults, they are those that usually accompany the ambitious woman of her age.'

Employers should actively recruit women for the economics staff so as to increase diversity—sex as well as race, field or specialty, and school of training. Evaluation of employees' performance and potential for advancement should be based on the same criteria for women as for men. Assumptions about availability for employment as economists should not be made on the grounds of marital status, other employment, home obligations, or the like.[9] Women faculty members should share equally in administrative and committee appointments. Temporary positions or consultantships should not be used for women as a subterfuge to avoid naming them to permanent positions. Titles such as lecturer or adjunct should not be used to deny tenure track positions. Similarly, in government and industry separate job classifications should not be used as a subterfuge masking discrimination against qualified women economists.

All women should have access to management and executive training courses. In-service training opportunities, "acting" administrative portions, and other forms of "grooming" for advancement should be made available for women as well as for men. Informal benefits, as for example, travel reimbursement opportunities should be equitably apportioned. Government agencies should submit evidence to the Civil Service Commission that women are being included in these activities. Follow-up evaluations of training courses should include information as to whether women participants in such training courses move ahead in their jobs as rapidly as men.

Members of the American Economic Association should review written and unwritten membership criteria of local or regional economics associations to ensure that women economists enjoy equal access and equal opportunity for participation. Members of the Association can be effective in protesting the exclusion of women from membership in any local economic association or any *other professional organization* to which they belong that is not willing to invite women economists to be members. Membership in such organizations is an important part of the informal professional network, and denying women access to any part of the network is sex discrimination.[10]

Positive efforts to regularly include women economists in the informal professional network should be conscientiously encouraged by all. The inclusion of women in this network should be considered a matter of routine operating procedures.[11]

Resolution Id) Salaries, fringe benefits, and facilities and resources for research for women shall be the same as those for men in the same position and rank.

All employers should regularly compare the salary, training, fringe benefits, and other terms and conditions of employment for women economists with those for male economists with comparable education and experience. Where women have not received treatment similar to that given men, corrective action should be taken immediately. Remedies may include giving the woman assistance with "upgrading" herself through leaves or other devices, changing rank or position, increasing base pay and granting back pay. (That back pay should be accompanied with interest may seem an ideal to some professionals, but scarcely to economists.) Rectifying a previous inequity can in no way be construed as reverse

---

In other words, the rare comment on a male's appearance is simply a footnote, the frequent comment on a female's, a thesis statement." . . . "Our experience of women's dossiers confirms that a letter writer, often unselfconsciously, diminishes a female candidate's intellectual power by stereotyping her as too feminine, too pretty. These comments, a composite from a type candidate's dossier, make a damning package: sweet, but not saccharine, quiet, unaggressive, shy, but very pretty, a decoration to the classroom." [M.L.A. Newsletter, p. 3]

[9] ". . . the employment form of a major oil company included the question, 'can this employee relocate?' On examining the completed forms of 300 women employees, the company found the appropriate box marked 'no' in every case. On probing further, they discovered that no one had actually asked the women whether they would relocate; it had simply been assumed that they would not." [Boyle: p. 94]

[10] In 1921 a woman graduate student at Stanford joined her professional association. When she married, she kept her membership; her husband was not then a member. Some years after that it seemed sensible for him to belong to the association and they made it a "family" membership, which they continued through 1972. In December they resigned their memberships. After some weeks the husband received a letter from the Secretary's office expressing regret for his resignation after having been a member for so many years and offering him a membership without publications. No such letter was sent to his wife although she had been a member for over half the century. (This information was presented to the Committee by Lucy Winsor Killough, a retired member of the Wellesley College faculty.)

[11] For many years, the Yale Economics Department conducted official business at a male-only club.

discrimination. Indeed, the aim of the action normally has to be to change the initial distribution of emoluments in favor of the party subjected to discrimination. By definition, at least the relative shares of all other groups must decline. There is no other way to correct unfair shares. What happens to absolute shares obviously depends on what's happening to the size of the pie.

After corrective action is taken, care must be exercised that equal treatment is maintained in the future. It is very easy to recognize that an equity raise has been given women, and then during the following years to slip into old patterns of thought so that merit raises gravitate to men in the department, thus reestablishing old patterns.

(1) *Salaries.* Employers should review and evaluate salaries paid to women even though no formal complaint or charge has been filed. Conferences with the women economists involved may prove helpful in diagnosing situations in which women feel that their salary is inappropriate. Lower geographic mobility among women should not be assumed or used as a rationalization for lower salary. Employers should not base the pay of a new employee solely on the basis of previous pay. The federal government should not continue to base GS ratings for entering academic economists primarily on the basis of total salaries before entering government service. Rather, the GS rating should be based upon objective criteria relevant to the job description. Otherwise, discrimination against women economists entering government service will simply compound past discrimination resulting from denial of equal access to outside consulting and related activities.

(2) *Fringe Benefits.* Employers should review all fringe benefits for possible sex discrimination and ways to facilitate employment of women. Examples include health and life insurance, pensioning, tuition grants for children, mortgage or other loans at low interest rates, subsidized housing, child care facilities on campus and at conferences, recreational facilities, and various sorts of leave. Women should not be discriminated against because of an actual or potential maternity leave. Men and women economists should be offered the same facilities and resources for research, including assistants, offices, and equipment.

Resolution Ic) There shall be no distinction between men and women as to what is considered to constitute full-time employment.

Both part-time and full-time positions should be described completely with respect to the obligations of the persons appointed. For example, many academic appointments consist of a combination of duties: teaching, consulting, advising students, departmental governance, recruiting supervising personnel, conducting research, representing the department, and so on. If one or more of such activities is optional, performance in the optional activity should not carry any weight in determining promotion or compensation. Those duties that are a necessary part of the job should be clearly stated and a minimum time should be specified.

Some women may wish part-time appointments, particularly for the few years while their children are small. Others may wish full-time appointments. Preference of individuals should be considered. Institutions should not base their hiring policy on the myth that most working women are interested in part-time work primarily to earn pin-money. On the other hand, institutions should increase the part-time options for those, men or women, who are interested. (See Resolution III.)

Decisions regarding appointment, promotion, salary, or tenure should be unaffected by the presence of a close relative in the same or related firm, department, or government agency. However, employees should neither initiate nor participate in institutional decisions involving a direct benefit (initial appointment, retention, promotion, salary, leave of absence, etc.) to members of their immediate families.

Much of the past discrimination against women has been related to their marital status as well as their sex.[13] Economists employed by a college or university,

---

[12] "The invisibility of the female job candidate emerges nowhere more unselfconsciously than in the dossiers of young, married graduate students. The dossiers of undeniably brilliant, serious, promising women, filled with letters from eminent advisers, very frequently and so the less valuable member of the couple. Indeed, one often wonders for whom the compare the woman with her husband, stereotype her as the teacher not the scholar-thinker, letter was written. One woman's letter contains this sentence: 'Mrs. —s husband—is an excellent scholar, rather more disciplined and professional. . . . Mrs. — complements him with her more imaginative and enthusiastic . . . literary rather than historical perspective.' . . . Or another begins: '—and her very able husband' and continues 'like her husband, she' . . . " Such letters affect the reader by reinforcing his notion that a woman is an appendage, her career second to her husband's; her talents shine in the light of his. [M.L.A. Newsletter, p. 3]

a firm, or a government agency with practices in conflict with those suggested here should campaign actively to have the rules or practices changed.

Without compromising standards in any way, special efforts should be made to facilitate the employment of couples who apply to institutions as teams. Such employment should be in keeping with the individual talents of the team members so that neither part will be specially burdened.

III.

Resolved that the American Economic Association shall encourage flexibility in providing opportunities for education and employment on a part-time basis both for men and women.

Care must be taken that "part-time" is not another job title that is used as a convenient way to deny job opportunities for women who wish to work, or in fact do work full time.

Resolution If) Employment may not be refused to any qualified economist on the grounds of family relationship to another employee.

Departments of economics should review all educational requirements that include a time specification. It is expected that a conscientious reexamination of existing procedures will lead to considerably more flexible arrangements at many academic institutions.

The question of part-time employment is a matter of department or institutional policy, but the question of whether the policy applies equally to men and women is not. It is imperative that in considering whether to allow (or encourage) part-time appoinments, only the impact on work activities be considered, and not the reasons why people wish part-time appointments. If policies on part-time appointments enable an employer to secure an expert who will teach one course or do one project although engaged elsewhere in other paid employment, then part-time employment should also be available to women—or men—engaged in work ordinarily considered a nonmarket transaction. The person who carries a portion of a conventional full-time load should have assigned duties and base compensation (full-time equivalent) comparable to those of full-time appointments, and duties, salaries and fringe benefits should be prorated. Academic departments should particularly look at such fringe benefits as research assistants and travel grants which tend to increase professional competence.

The part-time person who teaches one course or does one project may be hired on a consulting basis for a flat fee. In such cases no fringe benefits need be available if the fee is adjusted accordingly. Economists at academic institutions can encourage and assist nonacademic organizations to increase part-time opportunities even if department policy has ruled against this for faculty positions. Credentials, skills, and professional creativity required of part-time personnel should be at least equivalent to the levels required of full-time employees so as to justify the equivalent base pay. Part-time appointments should not be a way to get cheap, low quality service. Nor should they be used as means of pseudo-compliance with Affirmative Action Plans.

The Committee is willing to discuss any of the above guidelines in the context of particular situations or additional suggestions of ways to improve current employment conditions. Members of the American Economic Association should report to the Committee on the Status of Women in the Economics Profession any cases that appear to involve sex discrimination directed against women economists. Members are reminded that the Wage and Hour Division of the U.S. Department of Labor as a matter of course receives complaints of wage or salary discrimination on a confidential basis, with the possibilities of back pay being awarded. Furthermore, the Equal Employment Opportunity Commission acts on complaints of unequal advancement opportunities for women.

III. SUMMARY OF ACTION RESPONSIBILITIES

To comply with the resolutions adopted by the American Economic Association on December 28, 1971, a summary of action responsibilities, italicized below, has been prepared. Their central thrust should command virtually unanimous support: to eliminate extraneous considerations such as an individual's sex from any judgment of ability, performance, or potential.

I.

Resolved that the American Economic Association declares that economics is not exclusively a man's field. The Association herewith adopts a positive program to eliminate sex discrimination among economists, whether employed in universities and colleges, industry, finance, publishing, or other endeavors. The President shall make known, by all available means, the Association's adoption of the following principles:

(*a*) To redress the present low representation of women in the economics profession, the Association shall actively encourage the study of economics by women at all levels of education.

Action responsibility:

It is our obligation to affirm, in precept and action, that there are no genetic distinctions between the sexes which would preclude the study of economics by women on a proportionately equal basis with men. Since the role prejudice on the part of role occupants and role demanders is an acquired (i.e., learned) characteristic, educational institutions, government, and private industry should help dispel the prevailing myth that the current division of labor in the economics profession reflects relevant biological or genetic differences between the sexes.

(*b*) No academic institution or department shall discriminate against women in admission to studies in economics or in the form or amount of financial aid. Every economics department shall actively enocurage qualified women graduate students without regard to age, marital or family status, and shall actively promote their subsequent employment.

Action responsibility

With respect to admissions, financial aid and placement, the primary concern should be individual merit, i.e., an objective assessment of the candidate's ability, performance, and potential—irrespective of sex, marital, or family status. With respect to recruitment and encouragement in the program, academic institutions and departments should be mindful of the need to redress past inequities and derelictions which have produced the present imbalance between the sexes in the economics profession. They should also be mindful of the possitive contribution and enrichment of the educational process to be achieved through an increased participation of women. The profession can only stand to gain from the benefits of pluralist diversity and the recruitment of previously excluded, underutilized or unutilized talent.

(*c*) No employer, academic or otherwise, may discriminate against qualified women economists as candidates for positions, or for promotion or tenure, or for assignment of duties and responsibilities.

(*d*) Salaries, fringe benefits, and facilities and resources for research for women shall be the same as those for men in the same position and rank.

(*e*) There shall be no distinction between men and women as to what is considered to constitute full-time employment.

(*f*) Employment may not be refused to any qualified economist on the grounds of family relationship to another employee.

Action responsibility

In making appointment, retention, promotion, and tenure decisions, as well as in matters of compensation, fringe benefits, and prerequisites, women candidates shall be judged on their professional merit. The only relevant criteria shall be ability, potential, and performance. Care shall be exercised to avoid subtle as well as blatant, institutional as well as personal, forms of discrimination, especially where apparently innocuous regulations or policies impose differential burdens on women candidates. Institutional nepotism rules constitute the perhaps clearest departure from our central rule of judging candidates on their individual merit.

II.

Resolved that the American Economic Association establish a Committee on the Status of Women in the Economics Profession, numbering at least eight persons to be appointed by the President for a term of three years. The Association shall provide or seek funds for this Committee to investigate the extent of conformity to the principles stated above, and shall make recommendations for affirmative action. The Committee shall present an interim report at the next annual meeting. Its general findings, conclusions, and recommendations shall be published by the American Economic Association upon the Committee's request. When the Committee finds evidence of discrimination against women, it shall make this available for publication by the American Economic Association, and for the Association to present, as *amicus curiae*, in any complaint, remedial action, or suit.

Action responsibility

Economists in educational institutions, government, and the private sector should help disseminate the findings of this Committee and its recommendations. The Committee wishes to assist in affirmative action programs and/or positive efforts to overcome role prejudice, but it also stands ready to receive complaints of discrimination. Rules to ensure proper procedures in handling such complaints are currently being formulated.

III.

Resolved that the American Economic Association shall encourage flexibility in providing opportunities for education and employment on a part-time basis for both men and women.

Action responsibility

Making increasing provisions for education and employment on a part-time basis should be viewed as a technique for increasing individual opportunity and institutional flexibility. Such arrangements should not be allowed to serve as a cloak for evading compliance with affirmative action programs or for segregating women into underpaid and underprivileged professional categories.

IV.

Resolved that the American Economic Association appoint women economists as members of the editorial boards of its economic journals, that it actively encourage the appointment of women as program chairmen and participants at all future economic meetings, and that it urge companion associations to follow its example.

Action responsibility

The Committee has written to the officers of regional and local economic associations as well as of allied social science associations, and to the editors of journals dealing with economics and economic affairs, urging that women economists be among those considered in selecting reviewers, referees, editorial board members, speakers, program arrangers, and so on. Those responsible for planning programs, conferences, commissioned articles or reports, and other opportunities for demonstrating professional achievement must remember that when women economists are less visible than men their competence or availability cannot be evaluated. The Committee has provided assistance in locating women economists and expects to continue to do so.

IV. CONCLUSION

The recommended actions are only symbolic of needed changes in policy and attitude, if we are to correct the bizarre and irrational underrepresentation of women in the economics profession. The unemployment and underemployment of currently available talent, as well as the loss of potential talent, require positive, broad-gauged action to correct some structural imperfections in the professional labor market. To help eliminate these imperfections, one minimum step is continuing analytical study of the problem and regular, detailed reports to the Association and its members. In most instances—given the massive good will of our colleagues—the dissemination of information in itself will suffice to assure corrective action because, as Louis D. Brandeis once observed, "sunshine is the best disinfectant and electric light the most efficient policeman." In other instances, to be sure, additional steps will be required to eliminate existing market imperfections and anomalies. This implies a continuing obligation of the Association and its members to consider alternative mechanisms, consistent with professional standards and ethics, to promote genuine equality of opportunity and meaningfully free access for all scholars and practitioners in the discipline of economics.

AMERICAN ECONOMIC ASSOCIATION,
COMMITTEE ON THE STATUS OF WOMEN IN THE ECONOMICS PROFESSION,
Executive Secretary, Helen Bollin Munzer, Brookline, Mass.

The Committee on the Status of Women in the Economics Profession today charged that when it comes to changing the status quo, America's men economists are lagging far behind American businessmen. While more and more executives in government and business are discovering that it is profitable to employ women economists, college professors of economics continue to discriminate, both in employment and education. Dr. Carolyn Shaw Bell, who chairs the Committee which held its second meeting in Washington, D.C. on October 6, accused the economics profession itself of wasting economic resources. "The brains and energies of women in this country are being neglected, and no reputable economist should condone waste, let alone encourage it."

Releasing a preliminary report on the education and employment of women economists, the Committee emphasized the sharp contrast between the situation in government organizations and business firms and that prevailing on college and university campuses. Of 239 department of economics with 3,125 full-time faculty members, 122, almost half, had no women on the faculty. The total women economists in this part of academia numbered 177, or 6% of the total. By contrast, women economists in the Federal government account for 14% of the total, according to preliminary figures for October, 1971. Over half these women were in senior position. Although the Committee's information on business firms is not complete, evidence suggests that women graduates with training in economics find employment in business today far more readily than a decade ago. Newer fields like computer services did not start out with well defined men's jobs and women's jobs, and in more traditional areas like banking, investments, and management, women are making headway because of their performance. Graduate schools of management and business have taken note of this and acted accordingly. Of 22 leading graduate schools that are members of the Graduate Admissions Council, only two have no women faculty members, and all have actively recruited women in the past few years. On the other hand, among 43 economics departments in the small group of universities that train most economists, 17 have no women faculty members and little active recruiting for women.

"These data suggest that the only place where economics is a man's field is within the world of academic economics and, perhaps, within the American Economic Association," commented Dr. Bell of Wellesley College. The Committee on the Status of Women itself provides a case in point. Only after two years of pressure by a woman's caucus were resolutions passed to put the American Economic Association on record against discrimination and to establish the Committee to carry out an action program. The Association does not know how many women members it has, nor how many women economists exist, and at the moment its officers have no plans to find out. One of the purposes of the Committee is to remedy this situation on behalf of women who are not (or may be in the future) professional economists.

Every indicator suggests that the market for economists in the decade ahead will be expanding and recent Federal moves to lessen discrimination have already caused the demand for women economists to rise sharply. While the Committee's program for action aims at increasing the supply of women economists to meet this demand, its efforts will require total support from the academic establishment and from the professional association. In December, at the annual meeting of the American Economic Association, the Committee will present guidelines for individual members to follow. "We want endorsement of our position not only by colleges and universities," concluded Professor Bell, "but also by every responsible economist as a professional commitment."

The Committee members were Walter Adams, Distinguished Professor of Economics at Michigan State University and President of the American Association of University Professors, Carolyn Shaw Bell, the Katharine Coman Professor of Economics at Wellesley College, Martha Ossoff Blaxall, Economist at the Office of Management and Budget, Francine Blau, Assistant Professor of Economics at Trinity College, Kenneth Boulding, Professor of Economics at the Institute of Behavioral Science at the University of Colorado and a former president of the American Economic Association, Collette Moser, Assistant Professor of Economics in the Department of Agricultural Economics at Michigan State University, Barbara B. Reagan, Professor of Economics at Southern Methodist University, Myra Strober, Assistant Professor of Economics at the Graduate School of Business Administration at Stanford University, and Phyllis A. Wallace, Vice-President for Research of Metropolitan Applied Research Center and Visiting Profesor at the Sloan School of Management at Massachusetts Institute of Technology, and ex officio, John Kenneth Galbraith, Paul M. Warburg Professor of Economics at Harvard University and President of the American Economic Association.

PREPARED STATEMENT OF CAROLYN MARGARET ELLIOTT, DIRECTOR, CENTER FOR RESEARCH ON WOMEN IN HIGHER EDUCATION AND THE PROFESSIONS

CIVIL RIGHTS COMPLIANCE AND FEDERAL FUNDING OF INSTITUTIONS OF HIGHER EDUCATION

As a tenured Associate Professor at the University of California at Santa Cruz, and now Director of the Center for Research on Women in Higher Education and the Professions located at Wellesley College, I share fully the university community's commitment to excellence. I am convinced that the major responsibility for maintaining this commitment rests with the faculty, who by the excellence of their teaching, research and public service set standards for their students and for the continuing traditions of intellectual and scientific inquiry in our society. Therefore it is imperative that our universities and colleges recruit, foster, and reward persons of the highest intellectual caliber on their faculties. It is in service of this commitment to excellence that I am committed to affirmative action programs for women.

Our graduate schools are preparing increasingly large numbers of women to join university and college faculties. Yet, as many studies have demonstrated, a much lower proportion of these women are recruited to these faculties than are their male graduate school peers.[1] Furthermore, those women who do find academic employment are likely to be paid lower salaries and hold positions of lower academic rank than male colleagues of equal seniority and qualifications.[2]

There are at least three possible reasons for this discrepancy:

1. Women Ph. D.'s are less able than male Ph. D.'s. Not only does such an argument offend both common sense and the experience of many distinguished teachers of graduate students, it is also refuted by an array of studies. They show that: women entering graduate school have slightly higher scores on I.Q. tests and entrance examinations than entering males,[3] that in most fields a larger proportion of women secured their doctorates from one of the top ten graduate departments in their field than male doctorates,[4] and that while in graduate schools they have encountered more obstacles in securing fellowships, faculty and peer support, and study time than their male peers.[5]

We can only conclude that women Ph. D.'s are on the average at least as able as males, and are probably more highly committed to their work because they have survived more difficulties to pursue it. Furthermore, the greater concentration of women in the better graduate schools suggests that there is, if anything, more excellence proportionately in the pool of women Ph. D.'s than among the pool of males.

2. Women Ph. D.'s are not making themselves available for employment. This argument also is refuted by studies of labor force participation, which show that 91% of women doctorates are in the labor force, and that 79% have been fully employed since securing their degree. Of those who took time out for childbearing, the average period of absence was just 11–15 months, shorter than military service for males.[6] Therefore we cannot conclude that the low proportion of women on university faculties is because of their own disinclination to join them.

3. Resistance and neglect in male-dominated faculties. Graduate student and faculty committees across the country have shown how academic convention and university policies have systematically worked to exclude women from faculty positions. Exclusionary policies have been relatively easy to identify (though not to change.) Nepotism rules, stricture against part-time appointments carrying status and responsibility, reluctance to grant maternity leaves, etc. have

[6] Astin, p. 58.

forced many women to withdraw from the academic labor force or accept lower paying jobs.[7] Much more difficult to confront are the informal traditions of university life which discriminate against women. The professional and friendship networks through which academic recruiting has been done seldom include women.[8] Furthermore, reference letters written for women candidates frequently typecast women in roles ("best as a teacher") which are less valued in major universities, or describe their personal style ("aggressive") in ways which make them appear unattractive as colleagues.[9]

In my own experience of interviewing more than sixteen department chairmen at Santa Cruz, I found that most thought of themselves as open to the possibility of hiring women, but were unaware of how the conventions by which they proceeded made it unlikely they would find suitable candidates. These exclusionary policies and conventions must be identified and referenced. They are clearly incompatible with equal opportunity. But they also work against the pursuit of excellence in our universities and colleges. If the modes by which faculty are recruited, promoted, and rewarded make it likely that, for reasons irrelevant to their performance, persons are systematically disqualified, these practices are a disservice to our students and our society.

The limited experience with affirmative action programs to date suggests that they are critical to redressing this situation. Though these programs are deserving of close examination and criticism, they have begun to alter the pattern of discrimination and waste of talent that has prevailed.[10] In mathematics, for example, several women have recently been appointed to the prestigious named instructorships in major research universities which have previously been held almost exclusively by men. These positions give them an opportunity to be a part of a distinguished faculty during the critical early years of their professional lives. According to Professor Alice Schafer, President of the Association of Women in Mathematics, these women would not have been appointed without the pressure of affirmative action programs.

Thus I am proposing an essentially conservative reason for affirmative action programs. We need them to assist the university in researching the goal which it has always held highest, the recruiting and fostering of excellence. If the hiring in universities had in the past proceeded strictly according to the standards of merit which their faculties believed themselves to be pursuing, there would be no need for these programs. As they become more able to meet the standards they have set for themselves, such programs will disappear without notice.

Prepared Statement of Professor R. Creighton Buck, Mathematics Department, University of Wisconsin, Madison, Wis.

As a college teacher for more than thirty years, I must speak out against certain policies connected with the Affirmative Action program that have been fostered by officials of the Department of Health, Education and Welfare, through their use of the threat to withhold federal funds from colleges and universities, funds whose purposes have no intrinsic connection with the issues at hand but which are often central to our most vital national needs and goals such as research into energy sources and delivery.

The Affirmative Action regulations were initiated in response to historic patterns of discrimination, but their implementations have led instead to overt reverse discrimination which is in clear violation of the spirit of recent Civil Rights legislation; this is bringing a return to the malignant use of hiring quotas in institutions of higher education, and has created the threat of a serious decline in the quality of education itself if academic criteria based on quality are not retained as primary. The regulations themselves were written by bureaucrats inexperienced in academic policies and problems, based upon models developed within the Labor Department and entirely inappropriate to a field as unique as higher education.

[10] For instance, the University of Wisconsin Law School reports that the grade-point average of entering students rose this year, coincident with a rise in the number of women students. Report of the Project on the Status and Education of Women, Association of American Colleges, May 1973.

My own discipline is mathematics. In recruiting staff members for the Department of Mathematics at the University of Wisconsin, we hire young men and women as Assistant Professors with the clear understanding that these are temporary positions of a probationary nature. Since they and their peers are in competition for the few permanent positions that may become open, each new junior staff member must be selected carefully, keeping in mind all the criteria that apply to the senior position of a tenured Professor at the University. Since Wisconsin is a research centered university of national stature, two crucial requirements are a demonstrated ability to do and direct original mathematic research of high quality, and the teaching skills needed to pass this knowledge on to others. It is not enough that a new tenured employee be as good as the least qualified person already hired; since our aim is continually to improve the department, each new permanent staff member must be better than half of all those already granted tenure.

These statements differ considerably from conventional hiring practices in most labor markets; perhaps the closest analogy for people unfamiliar with the academic world is the selection of a new junior partner in a law firm from among the law clerks on the staff, or outside candidates.

Affirmative action policies have introduced new factors into this process; academic departments are often under pressure from the administration to hire new staff members because they are women or because they come from designated minorities. In response to this, the primary criterion of competence may be given second place, or ignored altogether. If the quality of higher education is to be preserved, we must be able to hire the best qualified persons, regardless of race, sex, creed, political views, or national origins. The forces that exist are creating pressures to lead colleges to hire unqualified staff members in order to meet assigned quotas or to "balance the ratios".

The role of women in science is puzzling. For reasons that are by no means clear, there are only a relatively small number of research mathematicians who are female. This is as true in Russia and China as it is in the United States. In Russia and the United States, such women hold respected positions in universities and take their places in professional societies and advisory councils. Many women are admitted to graduate school to study mathematics but few emerge as qualified candidates for the positions which we seek to fill at Wisconsin.

In mathematics, the situation with respect to blacks and other minorities has its own special problems. At present, there is a suitable available job for every qualified black mathematician, but the number in training is still far below the percentage to be expected from the size of the total college black population. Until this changes, it is unrealistic to demand that colleges hire faculty to match an assigned ethnic ratio.

Professor Barbara Hughes Fowler, Chairman of the Classics Department at the University of Wisconsin, has a unique view of this entire situation. First as a women, second as a respected colleague in a very strong and able department, and thirdly, as chairman of a special Committee on the Status of Women and an assistant to the Affirmative Action officer for the campus, she has had a chance to see both the good and bad aspects of the program as it has been practiced. I have asked her to permit me to insert here her own personal statement, reflecting upon this experience.

First, let me quote from her final paragraph, for it seems to me to focus upon one of the more serious weaknesses of the entire program, certainly deserving the attention of the Special Subcommittee. "Finally, I should like to say, despite my own obvious profit, that Affirmative Action seems to me to verge on blackmail—ineffectual blackmail at that—and so to be morally dubious. I should like to think that it will result eventually in the dissipation of some prejudice, but I am not at all sure that it will not in the long run have quite the opposite effect."

She also sums up a personal reaction in a way that I have heard reciprocated by persons representing ethnic minorities. "It is, after all, just as insulting to be given something simply because you are a woman as it is enraging to be denied it for the same reason."

The complete personal testimony is as follows:

COMMENTS BY PROF. BARBARA HUGHES FOWLER, DEPARTMENT OF CLASSICS, UNIVERSITY OF WISCONSIN

I took my Ph. D. at Bryn Mawr College in 1955 and began my teaching career as an Instructor in Classics at Middlebury College in the fall of 1954. In 1970 I was a half-time Lecturer, teaching full time for an annual salary of $6,000 at the University of Wisconsin. Today I am an Associate Professor, Chairman of my Department, teaching full time for an annual salary of $18,000. I also serve now on several all-University committees where I have for the first time had the pleasure of meeting colleagues outside my own department and the stimulation of discussing with them matters of professional interest to me. I suspect that I owe my promotion to faculty status, which I had so often been denied, in part, but not entirely, to the prospect of a visit to this campus by HEW in the fall of 1970. I know that I owe the dramatic rise in my salary to the Affirmative Action Program, which was established here in 1971. I probably owe my appointment and election to committees to the recently awakened consciences of my male colleagues.

In the spring of 1971 I was appointed to the Chancellor's Committee on the Status of Women, and in the academic year 1972–1973 I served as its chairman. In the spring semester of 1974 I served part-time as an assistant to the Affirmative Action officer on this campus. I think, therefore, that I can make some valid observations about the strengths and weaknesses of the Affirmative Action program.

There can be no doubt that Affirmative Action has done much to improve the salaries of women on this campus. Last spring I reviewed with their respective Deans all the salaries in the Colleges of Letters and Science, Education, and Agriculture. Although women's salaries still lag behind men's, it is by no means by the average $2500 that they did in 1970. The difference is now, I should estimate, about $1,000, and in some cases that difference may be justified by poorer publication or service records. In only two departments did I find the differences outrageous (as much as $5,000 less for women who were clearly more qualified than their male colleagues at the same rank and with the same years of service), and in one of these many of the men were also very poorly paid.

The other great gain that can be attributed to Affirmative Action is in the area of athletics. I was not myself at all involved in this very bitter controversy and cannot therefore comment specifically upon the changes that have been made, but I do believe that the common access to all facilities and the equalizing of budgeting for inter- and intra-collegiate athletics has been the most sensational achievement of the Affirmative Action program. It has also caused the most hard feeling, not only because of the ingrained prejudice of the men involved but because of the financial strain it will put upon the University, which had apparently planned to pay off its athletic debt under the previous system.

Affirmative Action has had some success in the area of hiring. Almost ten percent of the new hires last spring were women or minorities. One large department, which receives no federal funding, did several years ago set about hiring women and minorities and quickly fulfilled its hiring goals with very well qualified people. Admittedly, this was in a field in which there are many women available, but before the establishment of our Affirmative Action program the record of that particular department was abysmal: two women in a faculty of more than sixty. Other large departments which have hired a scant number of women have shown poorer judgement. They have, for example, hired women without the Ph. D., (always a risk), and will probably have eventually to let them go. This, I might say, is a common, probably unconscious, male procedure: to hire an inferior woman who will substantiate their prejudices and fulfill their prophecies. There is really nothing that Affirmative Action can do about this.

One of the exemplary, small language departments, which receives no federal funding, has granted tenure to a faculty wife who had suffered from the old nepotism "rule" (which never really existed and applied in any case only to wives, never to husbands or sons), hired a woman who had threatened to bring suit against the University from another department, hired temporarily a woman who had been laid off at another Wisconsin campus, and graciously accomodates another young woman who has a baby almost every year. Ironically, the only complaint I received in my term in the Affirmative Action office was against this department. A woman wanted to bring suit because it had hired the laid-off woman instead of her. It had done so in accordance with another of the University's programs, designed out of compassion.

In the sciences, all of which receive large amounts of federal money, no woman has, as far as I know, been recently hired in a tenure-track position. There is one woman in one of the biological sciences, but I believe that she was hired before the establishment of our Affirmative Action program. It is true, of course, that in many of these fields there are relatively few women available. Still, a university with the stature of Wisconsin ought to be able to attract a few women scientists. As chairman of the Committee on the Status of Women and as the assistant to the Affirmative Action Officer I dealt upon several occasions with the chairman of a very large sicence department in a field in which a reasonable proportion of the recent Ph. D.'s are women. This department receives considerable federal support. This man made me a number of promises to recruit women. He kept none of them and actually suppressed the fact that he had been given by the women research associates in his department a list of five women with impecable qualifications, all of whom were probably available to fulfill a position he had open last year. He contacted none of them and in fact told me that there were absolutely no women Ph. D.'s available in that area. The department is clearly not at all concerned about losing federal funds. Why should it be? It probably knows, as I know, that funds are seeping through to the University of Washington and to Berkeley despite their failures to establish satisfactory Affirmative Action programs. Furthermore, I am told by a top-level administrator here that even if funds were cut, the only people to suffer would be the research assistants and associates, not the faculty. This man has dealt extensively with the University budget and with federal agencies. I m sure that he knows what he is talking about.

Although some women have been hired at the assistant-professor level, I know of no woman who has been brought in initially in a tenured position, and the number of women lecturers, instructors, and clinical professors has actually increased. I do not know the reason for this, but I do know that these are positions in which women are traditionally exploited. In addition, although some women have been promoted to the ranks of assistant and associate professor from that of lectruer, there is no noticeable movement to move them on from that level. One department, however, did promote from lecturer to full professor. Departments seem to feel that they have done their duty once they have done the minimum. On the whole, then, Affirmative Action has not been particularly successful in the realm of hiring or promoting. This, I should like to emphasize, is in no way the fault of the Affirmative Action officer. It is simply that there is no way to force departments to hire people that they don't want, and there are many ways for them to avoid doing so.

The chairman of one department who wanted to promote a male lecturer to a tenure-track position and did not want to advertise that—or any other—position, suddenly discovered that that man had had a Spanish-American grandmother and that another member of his faculty was one-quarter native American. He asked me so to list them on my report. I discovered that these men had not described themselves as minorities on the appropriate University forms and that this was the chairman's way of avoiding the recruitment of women. On the other hand, why should he not have had the right to hire the young man? He had, presumably, proved himself in the job. Had he been a woman, the chairman would not have had to play so silly a game.

There are many such abuses of Affirmative Action policy. Typical is the case of one of my own graduate students who applied for a job he had formerly held in the University Library. He was told that he could not have it back because they had to hire a woman or a black. That was patently not true—there are plenty of women in the library. The director of the University Libraries, who has been more cooperative than almost anyone on this campus and who has been fighting an uphill battle to improve the status of his women employees, would never have made such a statement. The young man may well have been an undesirable employee, and the person who interviewed him may have used Affirmative Action as an excuse not to hire him. Such spiteful comments are common: they serve as an excuse not to hire and made Affirmative Action look bad at the same time. Nevertheless, that incident embittered his wife, a militant feminist long before the Women's Liberation movement began, and she tried to persuade him to file a complaint with the Equal Opportunities Office. I think that she was right to do so. There can be no doubt that in some cases Affirmative Action results in reverse discrimination, and there is no doubt in my mind that this is wrong.

I should like to give one final example of the absurdities that can and do arise from Affirmative Action. As a result of complaints to the University's Board of Regents and consequent pressure upon the Affirmative Action office, I attempted to "integrate" the Marching Band. After many unfulfilled promises and some outright untruths, the band did admit two women. This was not because of my persuasive techniques but simply because the Chancellor promised the band the additional University—not federal—funds which it had requested upon the condition that some women appear in the band. The director of that band, surely the most prejudiced and in fact "sexist" person I've talked to on this campus, is now receiving all kinds of credit from the local press as a "liberationist"—a case perhaps of the punishment fitting the crime.

Finally, I should like to say, despite my own obvious profit, that Affirmative Action seems to me to verge on blackmail—ineffectual blackmail at that—and so to be morally dubious. I should like to think that it will result eventually in the dissipation of some prejudice, but I am not at all sure that it will not in the long run have quite the opposite effect. Deans and Chancellors seem to feel that they must protect their male faculty against people like me, and women who have managed to achieve some status through merit resent having it all attributed to Affirmative Action. It is, after all, just as insulting to be given something simply because you are a woman as it is enraging to be denied it for the same reason.

PRO. BARBARA HUGHES FOWLER.

While there are areas where Professor Fowler and I might differ in our interpretation of events and motives, we both see manifest weaknesses in the present policies of HEW. To underscore one of her points, I recently learned from a colleague in History of an excellent young PhD who has applied for teaching positions in colleges, to be told by some that he could not be hired "because he was neither black, nor a woman." Fortunately, Oberlin College did not see it this way. Since his specialty is Russian history, and since he is a Polish jew who was transported to Siberia, and who has managed to come to the United States from there, he may be forgiven if he believes that the real reason he was not hired at some institutions was anti-semitism, and not Affirmative Action.

The only clean way to erase this type of malpractice is to turn to a policy of hiring individuals as individuals, selecting the person best qualified for the position, without regard for matters of race, sex, national origin, or political affiliation, neither giving preference to nor discriminating against minorities.

Thank you for permitting us to present these views.

UNIVERSITY OF NORTH FLORIDA,
October 15, 1974.

Hon. JAMES G. O'HARA,
Chairman, Special Subcommittee on Education, Committee on Education and Labor, Washington, D.C.

DEAR CONGRESSMAN O'HARA: This is in reply to your letter of 26 September 1974 requesting a statement regarding the University of North Florida's Affirmative Action Program.

I am enclosing copies of two articles which together represent a comprehensive statement of the philosophy, objectives, procedures, successes, and failures of our program. Perhaps you will conclude that the two articles are more lengthy than the statement which you requested. If so, please let me know and I will prepare a summary statement.

I would appreciate an opportunity to appear before the Subcommittee and discuss our Program. We believe that the University of North Florida is well on the way toward being the first institution of higher education which genuinely merits the term "equal opportunity."

Very truly yours,

ROY L. LASSITER, Jr.,
Vice President and Dean of Faculties.

Enclosure.

AFFIRMATIVE ACTION AT THE UNIVERSITY OF NORTH FLORIDA: A FURTHER REPORT

(By Roy L. Lassiter, Jr.)

I. INTRODUCTION

In the April/July, 1972 issue of this *Review* I reported on the philosophy, objectives, and attainments of the Affirmative Action Program of the University of North Florida.[1] Since at the time of that report classes had not yet begun at the new institution, I pointed out that the appraisal was tentative. In the introduction to that article I indicated the lack of an exciting comprehensive statement outlining a successful affirmative model in higher education, and stated that the purpose of the article was to describe a tentative model under which significant achievements had been made and which gave promise of providing the first example of a comprehensive and successful program.

This sequel attempts to bring the earlier paper up to date and describe and analyze the results of the Affirmative Action Program through the University's first year of operation. The beginning of the second year of classes is an appropriate time to evaluate achievements and failures and to identify some of the lessons derived from the experience to date. Furthermore, some speculation about the future is in order. Again, however, the reader is warned that the personal involvement of the author in the Program may cast some doubt on the complete objectivity of the analysis.

TABLE 1.—RECRUITING EFFORTS BY THE UNIVERSITY OF NORTH FLORIDA DIRECTED TOWARD BLACK PERSONS TO FILL ACADEMIC POSITIONS FROM FEB. 1, 1970 THROUGH SEPT. 15, 1973

	Academic personnel category			
Recruiting action	Deans	Associate deans, assistant deans, department chairmen, and other academic administrators	General faculty	Total
Number of black persons interviewed and/or personally contacted for specific positions	5	[1] 12	[1] 131	148
Number of formal offers extended to black persons	1	[1] 9	[1] 24	34
Number of black persons accepting positions	0	[1] 5	[1 2] 16	[1] 21

[1] Double-counts 1 person on the general faculty who was offered and who accepted an academic administrative position at the end of the 1972-73 academic year.

[2] Includes 1 faculty member on leave to the Oak Ridge National Laboratory in 1973-74.

TABLE 2.—COMPOSITION OF THE FACULTY OF THE UNIVERSITY OF NORTH FLORIDA BY RACE, SEX, AND PROFESSORIAL RANK, SEPTEMBER 15, 1973[1]

	White		Black		
Professional rank	Male	Female	Male	Female	Total
Professor	19	1	2	0	22
Associate professor	28	3	4	1	36
Assistant professor	63	9	[2] 3	2	77
Instructor	3	3	4	4	14
Total	113	16	[2] 13	7	149

[1] Excluding faculty adjuncts and staff members holding professorial titles but paid from nonprofessorial line items.

[2] Includes 1 faculty member on leave to the Oak Ridge National Laboratory in 1973-74.

II. THE FACULTY

Beginning in the early Fall of 1971, faculty recruitment intensified as the institution prepared for the Fall, 1972, opening of classes. In October of 1972 the recruitment of additional faculty for the 1973–74 academic year assumed high priority as the University planned for adding senior year course offerings, two new masters degree curricula, and expanded junior year course offerings. Now that faculty recruitment for the basic programs has been completed, the overall results can be presented.

---

[1] Roy L. Lassiter, Jr., "Affirmative Action at the University of North Florida," *The Negro Educational Review,* Vol. XXIII, Nos. 2 & 3, April/July, 1972, pp. 87–114.

As indicated in the earlier article, the major objective of the Affirmative Action Program was to build a faculty and staff whose racial compositions roughly approximated that of the population of the northeastern Florida region. As a result of a two and one-half year nationwide recruiting effort, 148 black faculty prospects throughout the United States were personally contacted and/or interviewed regarding the possibility of appointments to the faculty (see Table 1). Many of these persons indicated salary requirements or personal situations which precluded a move to the University. Thus the number of personal contacts substantially exceeded the formal offers. A number of associate and assistant deanships, department chairmanships and other academic administrative positions were filled by black persons (again see Table 1). The overall result was that 13.4 percent of the 149 regular academic positions authorized and filled at the beginning of the 1973–74 academic year were filled by black faculty members. A number of professorships and associate professorships were filled with black persons of substantial experience in several discipline areas.

However, due to salary limitations and the scarcity of senior black persons in many disciplines, it was concluded early in the recruitment program that a special effort should be made to identify prospects among younger black persons holding masters' degrees. Some exceptionally able younger men and women were appointed to the faculty as instructors (see Table 2). The experience of the first year of operations has amply demonstrated the teaching and advising capability of these younger faculty members and thus the wisdom of the decision.

III. THE STAFF

While most affirmative action programs in higher education emphasize faculty and student areas, equal attention was given to the staff in the University of North Florida's program. As with the faculty, recruitment of Administrative and Professional personnel was nationwide.[2] Recruitment of Career Service staff was largely concentrated in the northeastern Florida region, but did extend as far away as Atlanta. In the Administrative and Professional category 11.1 percent of the staff are black, and the positions filled by these persons include: Director of Admissions, Director of Student Financial Aid and Assistant Director of Libraries for Public Services (see Table 3). Approximately 26 percent of the Career Service staff is comprised of black persons, and the positions held include: Laboratory Manager, Assistant Director of Personnel, Audio-Visual Librarian, Library Assistant, Vocational Counselor II, Staff Assistant II and Accountant III.

TABLE 3.—COMPOSITION OF THE STAFF OF THE UNIVERSITY OF NORTH FLORIDA BY RACE, SEX, AND PERSONNEL CATEGORY, SEPT 15, 1973

Personnel category	White		Black		Total
	Male	Female	Male	Female	
Administrative and professional	25	7	2	2	36
Career service	78	88	17	40	223
Total	103	95	19	42	259

Many institutions have staffs in which the equivalent of the Career Service component may consist of a large number of black persons. However, a careful examination of the distribution of these employees among the various job classifications will reveal that the black personnel at these institutions are largely concentrated in the custodial and groundskeeping areas, and even within these areas relatively few of the supervisors are black. A partial distribution of black Career Service staff of the University of North Florida is illustrated in the selected position categories in Table 4. While approximately 41 percent of the custodial and groundskeeping staff are black, there is a higher proportion of black persons than white in the supervisory and higher pay classes in these categories. On the other hand, among the Library Assistant (relatively high paying positions requiring a bachelor's degree) black persons comprise 41 percent of the personnel.

---

[2] In the State University of Florida there are three personel classifications: Faculty, Administrative and Professional (administrative and staff position essentially unique to universities), and Career Service (state civil service).

Table 4 also illustrates the breadth of the distribution of black persons among various University units and the Career Service positions which they hold. In general, the distribution of black persons is reasonably uniform with major exceptions in the Computer Center and the clerical support positions in the Colleges. Overall, the support departments and units have achieved greater success in finding and appointing black persons to Career Service positions than have many of the academic departments.

TABLE 4.—CAREER SERVICE STAFF OF THE UNIVERSITY OF NORTH FLORIDA IN SELECTED POSITION CATEGORIES BY RACE AND SEX, SEPT. 15, 1973

Category and designation of position	Race and Sex				
	White		Black		
	Male	Female	Male	Female	Total
Custodial and grounds workers:

Total	25	67	8	37	137

IV. TRENDS IN STAFFING PATTERNS

The effectiveness of the Affirmative Action Program may be measured, in part, by the growth in number of black persons holding faculty and staff positions and by the changes in the percentage of total faculty and staff they comprise. Since September 1, 1970, the number of black faculty, staff and student assistants has increased from five to 137 on September 15, 1973, while the total filled positions at the University has increased from 35 to 587 (see Table 5). The percentages of black faculty and student assistants declined until April 1, 1972, although their absolute number increased dramatically. Beginning with the Fall of 1973, the percentage of black faculty increased over the preceding fall, but the percent of black student assistants and temporary staff declined further, even though the number increased substantially. Overall, 22.3 percent of the faculty and staff were black as the second year of classes began (again see Table 5).

TABLE 5.—RACIAL COMPOSITION OF THE FACULTY AND STAFF OF THE UNIVERSITY OF NORTH FLORIDA BY PERSONNEL CATEGORY AND ON SPECIFIED DATES[1]

Personnel category	Total number of positions filled				Number of positions filled by black persons				Percent of positions filled by black persons			
	Sept. 1, 1970	Sept. 1, 1971	Apr. 1, 1972	Sept. 15, 1973	Sept. 1, 1970	Sept. 1, 1971	Apr. 1, 1972	Sept. 15, 1973	Sept. 1, 1970	Sept. 1, 1971	Apr. 1, 1972	Sept. 15 1973
Faculty	6	22	71	149	1	3	9	[2] 20	16.7	13.6	12.7	13.4
Staff	26	77	109	250	1	10	24	61	3.8	13.0	22.0	24.4
Student assistant and OPS [3]	3	19	31	188	3	10	16	56	100.0	52.6	51.6	30.0
Total	35	118	211	587	5	23	49	[2] 137	14.3	19.5	23.2	23.3

---

[1] Excludes adjunct faculty and staff members holding professional rank.

[2] Includes 1 faculty member on leave to the Oak Ridge National Laboratory in 1973-74.

[3] Other personnel services, i.e., temporary staff.

V. THE STUDENT BODY

In my earlier paper I described in some detail the University's efforts to project its affirmative action objectives to students in general and black students in particular. Recruitment of students for an upper level and graduate institution is considerably different from that for four year institutions, in that the incoming undergraduates are primarily graduates of the community colleges. The difficulties in recruiting black students were further complicated by the fact that many black students have perceived the public community college system of Florida to be relatively unresponsive to their needs particularly in university parallel programs. As a result, the pool of students from which the University of North Florida recruited was comprised of a relatively small proportion of black students. For example, in the Fall of 1972 only 9.3 percent of the 123,920 students enrolled in the public community colleges of the State were black, and many of them were ineligible for transfer since they were enrolled in technical and terminal programs and adult education (in a few institutions) rather than the college parallel programs.[3]

Despite this handicap, the University opened in the Fall Quarter of 1972 with slightly over 7 percent black enrollment among the 1997 students (see Table 6). This percentage was substantially above any other institution in the State University System of Florida, excepting Florida Agricultural and Mechanical University.[4] Over the full 1972–73 academic year black students averaged about 7.5 percent of the total student body of the University of North Florida, and in the Summer Quarter of 1973 the percentage increased to 9.25 percent (again see Table 6). In the Fall Quarter, 1973, nearly 9 percent of the 3171 students were black.

TABLE 6.—RACIAL COMPOSITION OF THE STUDENT BODY AT THE UNIVERSITY OF NORTH FLORIDA, BY QUARTER 1972-73 AND FALL, 1974

[In percent]

Term	Race						Total
	White	Black	Oriental	Spanish	Indian	Other	
Fall quarter, 1972	91.20	7.06	0.56	0.62	0.11	0.45	100
Winter quarter, 1973	90.63	7.84	.41	.51	.15	.46	100
Spring quarter, 1973	91.34	7.41	.38	.44	.05	.38	100
Summer quarter, 1973	89.42	9.25	.38	.38	.06	.51	100
Fall quarter, 1973	89.40	8.96	.47	.57	.20	.40	100

VI. SUMMARY AND CONCLUSIONS

In the previous article I concluded that the Program had not been in operation long enough to apparise its effectiveness. Nearly two years later a similar conclusion is indicated. However, for the University of North Florida it can be stated that the achievements have been considerable and that the prospects for developing a genuine equal opportunity University are brighter than ever.

It is also possible now to identify more clearly the lessons derived from experience, the problems encountered, and some of the challenges for the future. The more significant of these include:

1. The wisdom of emphasizing the recruiting and identification of prospects, as opposed to rigid quotas, has been clearly established. Because the deans, chairmen and directors were free to appoint the best qualified from among the candidates, after demonstrating a good faith effort at identifying minority prospects, no one can reasonably assert that appointments were offered or withheld because of race. A far ranging and vigorous recruiting program for all University positions is and will continue to be the core of the Affirmative Action Program.

2. The most significant continuing source for the identification of prospective black candidates for faculty and staff is the cadre of minority persons already associated with and committed to the institution.

---

[3] The racial composition of enrollments in the public community colleges of Florida is found in *A Plan for Equalizing Education Opportunities in the State University System of Florida:* Tallahassee, Florida Board of Regents, June 15, 1973, Appendices, pp. i and ii.

[4] The State University System of Florida is comprised of Florida International University, Florida State University, University of West Florida, University of North Florida, Florida Agricultural and Mechanical University, Florida Atlantic University, University of South Florida, Florida Technological University, and University of Florida.

3. It is possible to achieve a momentum which may maintain at least one component of the Affirmative Action Program, even with reduced efforts. This has been particularly true with the Career Service staff. Initially, extensive advertising and contacts with community service agencies were necessary to identify prospects. As the number of black Career Service staff has increased, these efforts have been reduced, and increasing reliance on "word-of-mouth" has been possible as the staff itself spread information regarding job opportunities. With the exception of certain technical specialties, it now appears that an increasing number of black applicants will be forthcoming without intensive recruiting.

4. The University has now reached a turning point requiring further intensification of recruiting efforts for administrative and professional personnel and faculty. With the exception of new professional positions in the Library, the administrative and professional staffing is essentially complete, and recruiting will be for specific expertise to fill vacancies. The faculty will grow at a much slower rate than in the past two years, and recruiting will be more selective as particular capabilities are sought to fill vacancies and staff new programs. Perhaps these conditions will provide the real test of the Affirmative Action Program.

5. Increasing emphasis must be placed on in-service training for administrative and professional personnel and career service staff to insure equal opportunity for promotion and advancement. In addition, opportunities for doctoral study must be provided for the young faculty members with master's degrees. A comprehensive faculty and staff development program is required and is currently under development.

6. One vital dimension of a successful affirmative action program initially overlooked at the University was the area of human relations and preparation of the various components of the University community for a totally integrated situation.[5] Because of the recency of integration in the educational system in particular, and society in general, there is no guarantee that white professors would be sensitive to the needs of black students or that white students would be prepared for the prospect of being taught by black professors. Furthermore the general interspersion of blacks and whites among the faculty and staff positions might tend to increase communication problems and stresses, and the general public could have difficulty accommodating to a bi-racial enclave in its midst. Although there have been no problems of serious magnitude to date, some of the misunderstandings and stresses which have developed because of differences in cultural backgrounds could have been alleviated by an educational effort within the University community. One step taken to rectify this omission was the creation of a Task Force on Human Relations which has been charged with both the assessing of the present status of racial relations within the institution and recommending appropriate additions to the Affirmative Action Program to overcome any existing and/or anticipated problems.

7. Academic persons generally profess a liberal position on equal opportunity, but practice tends to fall short of the expressed ideal. Thus, if an affirmative action program is to be successful, commitment is required at the highest administrative level and, to quote my earlier paper, "a display of muscle" may be required at times. This is particularly true as the faculty grows in size and the original commitment diffuses among greater numbers.

8. Finally, I earlier deplored the fact that no successful model was available in higher education when the initial planning for the University of North Florida was begun. Since that time no such model has come to my attention, although the number of conferences, consulting firms and university officers concerned with affirmative action have proliferated beyond imagination. Hopefully, the University of North Florida will be the first to provide the much needed model.

---

[5] I must confess that the major fault for this omission is my own. As the University officer charged with the responsibility for developing, implementing, and administering the Affirmative Action Program I proceeded on the naive assumption that proximity to persons of different cultural background and participation in a significant enterprise such as building a university would substantially mitigate against the development of stress arising within a community which was unique in every member's experience.

FREED-HARDEMAN COLLEGE,
Henderson, Tenn., October 16, 1974.

Mr. PHILIP J. DAVIS,
Director, Office of Federal Contracts Compliance, U.S. Department of Labor, Washington, D.C.

DEAR MR. DAVIS: We were very pleased to see in the Federal Register of March 29, 1974 the proposed exemption for religious entities reading:

"CONTRACTS WITH RELIGIOUS ENTITIES

"The requirements of [illegible] equal opportunity clause shall not apply to a religious corporation, association, educational intitution or society with respect to the employment of individuals of a particular religion to perform work connected with the carrying on by such corporation, association, educational intitution, or society of its activities."

As noted, this proposal was "intended to establish consistency between the religious exemption provisions of section 702 of the Civil Rights Act of 1964, as amended by the Equal Employment Opportunity Act of 1972, and the rules and regulations of the Office of Federal Contract Compliance."

On a recent trip to Washington, I learned that the proposed exemption has not been adopted and that consideration is being given to revising it so as to exempt only personnel employed for specifically religious functions of the organizations. This possible limited exemption would be most unsatisfactory.

Congress has not prohibited religious entities, including religious educational institutions, from considering religion in the employment of personnel because it is clear that such a prohibition could change the fundamental character of such entities, even to the point of eliminating their reason for being.

Equality of educational opportunity in America includes the opportunity to choose a private college with particular values, traditions, and convictions. The diversity so widely acknowledged to be a virtue of American higher education (albeit one diminished and threatened by homogenizing inflences) is realized through public institutions, secular private institutions, and religiously-oriented private institutions (whether or not under the control of a particular church).

Should such colleges be required by regulation to disregard the presence or absence of religious convictions (or hostility to religion) in the employment of administrators, faculty members, counselors, and dormitory personnel, they would find their influence diluted and the distinctive character which attracts students to them diminished. The institutions' demise would not be unexpected. Permitting consideration of religion only in the selection of a few persons such as chaplains or religion faculty would not preserve the institutions. Some institutions would, in fact, be subject to loss of their facilities because of deeds, charters, and bequests which relate to their commitments.

Freed-Hardeman College is an independent Christian college governed by a self-perpetuating board of directors. It does not discriminate on the basis of race, sex, or religion in the admission of students or their opportunities. It does not exercise preferences on the basis of sex or race in the employment of personnel. This is all the law requires or should require.

If Executive Order 11246 as amended by Executive Order 11375 requires that no consideration be given to religion (sectarian, irreligious, antireligious, nonreligious, or non-Christian convictions) in the employment of personnel, the executive orders should be amended, the regulations should exempt religious entities as proposed, or Congress should provide an exemption by law.

A member of your staff with whom I talked (and who was very helpful and understanding) said "at this time" there is no plan for goals and timetables. The specter of requiring religious entities to establish goals and timetables for integrating into their staff employees of varied religions and nonreligious persons in proportion to their presumed distribution in the general population (even as a future possibility) is most disconcerting.

Freed-Hardeman College is not a federal contractor, and it is unlikely to seek contracts until or unless this matter is resolved. The exemption should be clearly applied to contractors, grantees, institutions enrolling aided students, and entities holding tax exemptions or eligible to receive deductible contributions.

I was told that while the deadline for comments was past, comments would be considered while the matter is pending. We are most anxious to know of any developments related to the proposed exemption.

Sincerely,

J. D. THOMAS, *Academic Dean.*

Milwaukee, Wis., October 18, 1974.

DEAR REPRESENTATIVE O'HARA: I read with great approval of your subcommittee's investigation of the effects of affirmative action in academia. I would like to offer a few thoughts.

I have studied for ten years in preparation for an academic career. Now I find it blocked, and even auxiliary careers, such as educational administration shut off, from me due to the accident of my birth. I find it hard to accept that all of the sacrifices I have made are supposed to be washed away simply because someone in Washington feels guilty about America's past.

Affirmative Action will garner only hostility as a dwindling number of positions are competed for and the competent denied due to the fact they are white males. Inevitably, extremist politics will take hold, and all the vaunted gains for blacks and women will be repealed.

I am opposed to bias of all kinds, including that practiced against white males. I hope you will be too. End affirmative action now.

Sincerely yours,

JAMES L. JABLONOWSKI.

STATEMENT BY NELLIE M. VARNER, DIRECTOR, AFFIRMATIVE ACTION PROGRAMS, THE UNIVERSITY OF MICHIGAN

AFFIRMATIVE ACTION: A TIMELY NEW MANAGEMENT TECHNOLOGY

In the two years that I have served as an Affirmative Action Officer at the University of Michigan, I have come to believe that, beyond altruism, affirmative action has a lot to recommend its survival in the competitive marketplace of public policies. I would like to share some of my thoughts about it with you in the next few minutes.

I invite you to consider affirmative action as a timely new management technology which lends itself to the handling of an array of problems faced by colleges and universities in a period of financial austerity, pressures for change and the need to be accountable for the efficient use of resources. I believe that it would be a concept with intrinsic merit as a modern administrative instrument even if Federal regulations were repealed. Affirmative action policies are programs for institutional change. They offer a means whereby institutions can effectively manage and accommodate that change rather than being controlled by it. As presidents of colleges and universities, you are the chief change agents in your institutions. You have the leadership responsibility for implementing institutional change.

It was not until the enactment of the Executive Order 11246 six years ago and the passage of the Higher Education Amendments of 1972 that Federal regulations in the area of equal employment reached back (I deliberately say "reached back" rather than "caught up with") and brought higher educational institutions under the requirements to contribute directly to the social goals of equal employment opportunity. Unfortunately, as is so often the case when institutions encounter late demands for social responsiveness, they react rather than take the initiative. In this climate, the quest for equal employment opportunity in higher education became a prism of negative perceptions: quotas, preferential treatment for women and minorities, compromise of excellence, plans, timetables and endless government interference. The protected groups, too, have begun to view affirmative action through cynical reactionary eyes as tokenism, game playing and insincere efforts carried out under the threat of compliance rather than a commitment on the part of administrators to equal opportunity and a willingness to participate in the solution of social problems. In fact, affirmative action, more often than not, has come to be viewed by management as the problem rather than as the solution. However, I offer for your consideration several areas in which affirmative action can serve management as a positive problem-solving mechanism. These are personnel administration, institutional planning, organizational goal setting and management accountability.

Let's examine affirmative action as a new personnel technology. It is not just a device for bringing excluded groups into the system. It is a means of making personnel systems fairer and more objective. Strictly from the standpoint of management accountability, affirmative action's demand for more open recruitment and selection procedures ought to be welcomed improvements for the unaccountable, inaccessible, patronizing "old boy network". In a period when institutions must be able to explain and account for their utilization of resources, it is difficult to justify the waste of human resources. To reject women and minorities and restrict one's search for talent to less than one-half the population, namely, that portion composed of white males, is profligate. Institutions of higher education have the task of certifying knowledge and skills. It is appropriate for them to review their own occupational categories. If such reviews eliminate arbitrary requirements unrelated to job performance, unfair credentializing and indiscriminate linking of degrees with jobs, this cannot help but result in greater utilization of employee talent. We can rely on rigorous peer review to maintain excellence in our faculties. However, in a period of declining enrollments, budgetary cutbacks, a surplus of Ph.D.'s and a concentration of tenured faculty, merit is not the sole ground for granting or denying promotion. Consequently, a clarification of standards and criteria for promotion—integral requirements of affirmative action—is needed to make the best judgments for both the individual and the institution. And, in the last analysis, it is just plain good management to conduct a self-audit, to review and identify employment practices which have discriminatory effects before the Federal government intervenes with the prospect of costly litigation, back pay awards, court imposed goals and timetables and changes in employment practices.

Planning is another modern administrative requirement for which affirmative action can be an effective instrument. An essential part of affirmative action is the planned, engineered access of members of protected groups into the institutional mainstream. Affirmative action has been criticized for subverting the ends by the means in placing institutions at the mercy of data analysis and the numbers game. However, I submit that planning is a creative, enlightened, efficient and accountable way to orchestrate and accommodate change. The question is not whether plans and timetables are needed, but how to best utilize the opportunity that their necessity presents to implement the change mission of the organization. For example, affirmative action programs require availability data, needs analyses arrived at through a systematic examination of attrition, determination of workforce pools in terms of numbers and skills and the assessment of employee potential for career development and upgrading. These studies can provide a reliable base for decision-making about an organization's use of human resources. Computer analyses of appointments, promotions, retirements and turnover can project future profiles of the entire workforce on the basis of past and present distributions and project needed rates of progress toward the fulfillment of employment goals. Whether we call it "affirmative action" or by some other name, it appears to me that as the executives of complex educational enterprises, you would not wish to consider the consequences of alternative policies in the absence of such information.

Planning seems to imply greater control, and in an educational environment autonomy and decentralization are sacrosanct. However, the participatory bureaucracy which characterizes academic governance has never been noted for its efficiency; and if greater central planning and control are inherent in affirmative action, then, affirmative action is a healthy mechanism for challenging an institution's accustomed practices. Additionally, it affords an opportunity for administrators to draw on the academic tradition of "governance by consultation" to operationalize one of the basic axioms of the managerial grid: effective managers get things done through people. Affirmative action goals and objectives are more likely to be achieved when line supervisors help set them and have knowledge of their stake in the outcome. Thus, institutional leaders can strive to achieve total involvement from top-management down, in the commitment to equal opportunity. Such involvement not only conveys to the organization that the leadership is serious, but also enhances accountability by making each unit accountable for contributing its share. Moreover, administrators can be appraised in terms of their success in achieving affirmative action goals just as they are evaluated on their ability to reach other important objectives. In such a climate, affirmative action monitoring, which has so often been the object of criticism, becomes a useful tool for assessing the goal achievement process. It is inconceivable that university presidents, like all good executives, would not want to keep track of what is happening in their organizations.

I would like to conclude by challenging you as presidents in higher education to take the leadership in implementing the creative management techniques that are embodied in affirmative action processes. This leadership entails shifting the thrust of higher education's response to affirmative action and equal opportunity. Instead of reaction, complaint and criticism, let's turn to creative implementation. If we will concede that the government may have asked the right question, namely, "Are the goals of affirmative action just?" but may have provided the wrong answers with respect to some procedural and due process matters; then it is the responsibility of higher education to inform government of what will work. If we do not want the government intervening and interfering like a thug coming in from the cold, both literally and figuratively, we must make affirmative action work for ourselves. And we can do it. As presidents, you head the greatest talent pools in this country. Let's unleash this talent to help our institutions meet their social needs with respect to equal employment opportunity. It simply makes good administrative sense.

RUTGERS UNIVERSITY,
New Brunswick, N.J., October 28, 1974.

Hon. JAMES O'HARA,
Chairman, Special Subcommittee on Education, U.S. House of Representatives, Washington, D.C.

DEAR MR. O'HARA: Enclosed you will find a critique I have prepared of Richard Lester's book Antibias Regulation in Universities. I would appreciate it very much if you would insert this report in the written record of the hearings you have been holding on anti-discrimination legislation in education.

I am an Associate Professor of Spanish and Associate Dean of Rutgers College, Rutgers—The State University. I am also past president of the New Jersey Division of the Women's Equity Action League and past head of the National WEAL Education Committee. The views expressed in the enclosed paper are my own, not necessarily those of the above institution and organization, which I have mentioned for identification purposes only.

I would appreciate it very much if you would send me a copy of the hearings when the printed record becomes available.

Sincerely,

PHYLLIS Z. BORING,
Associate Dean.

Enclosure.

ANTIBIAS REGULATION OF UNIVERSITIES: A BIASED VIEW?

(By Phyllis Zatlin Boring)

The recent publication of Richard A. Lester's Antibias Regulation of Universities: Faculty Problems and Their Solutions (McGraw-Hill, 1974) and the discussion that it has generated are reason enough to examine once again the issue of affirmative action in higher education. As former Dean of the Faculty of Princeton University, Lester has impeccable credentials. His book, sponsored by the prestigious Carnegie Commission on Higher Education, appears authoritative—even though the Commission does not necessarily endorse its contents and Lester does, in fact, disagree with the Commission's own findings. Given the reputation of author and sponsoring organization, Antibias Regulation of Universities has already become a powerful weapon in the backlash arsenal. This is unfortunate for two reasons. The number of excellent proposals Lester makes in the book are being overlooked by those who delight in the attack on affirmative action, and the unsupported assumptions upon which that attack is built are being accepted as undisputed fact.

A scholarly work, Lester's book contains a good bibliography and numerous footnotes, thus giving the impression of thorough research and objectivity. But the study is not objective, and the conclusions are all the more dangerous because the bias in the work is subtle. The whole analysis of the university situation is structured on some shaky premises. Lester writes from the standpoint of the handful of prestige universities, but his title does not indicate that his position, if it is valid, probably does not apply to the majority of institutions of higher education in the country. He indicates that he interviewed adminstrators and faculty at twenty universities before writing his book, but he fails to identify the institutions. Did his selection of administrators and institutions prejudice the outcome of his findings? Two years ago, in addressing the New Jersey State Conference of AAUP Chapters, Lester made statements almost identical to those in his book; did he perhaps reach his conclusions before all the evidence was in? Lester assumes that those who criticize higher education do not understand the system, apparently not realizing that Uncle Sam was called onto campus in the first place by those already there. He also assumes that in the democratic procedures used in hiring and promotion, only merit is taken into consideration. If women are promoted more slowly than men or paid less than men, it follows logically that they are less meritorious. Except for one fleeting reference, Lester never acknowledges that differential treatment of women and minority faculty could be the result of prejudice.

The ultimate solution that Lester proposes includes an in-house arbitration system for grievances. Instead of going to governmental agencies, a faculty member who felt that he or she had been illegally discriminated against could bring the case before a panel of arbitrators, specially trained for settling such disputes, and could receive more informed and speedier action than might come from HEW. The proposal is an interesting one and should be studied by an organization such as AAUP. The system would not, in fact, be substantially different from AAUP's own Committee A, which has successfully settled differences between faculty and administration for many years. Universities would prefer to have such grievances reviewed by people with firsthand knowledge of higher education, and individual complainants, who now sometimes have to wait for years before their cases are acted upon would probably also benefit. The proposal is a positive one, which merits discussion and study, as are other suggestions from Lester. He recommends internal data collecting—perhaps more efficient than what now takes place in many universities—and he further recommends that junior faculty be advised periodically on their progress so that they will know what is expected of them.

What Lester does not point out is that, if higher education had set up such machinery and had been willing to listen to complaints of discrimination in the first place, there would have been no need to resort to HEW. And that brings us back to one of the fallacies in his argument.

Executive Order 11246, as amended by 11375, went into effect in October, 1968. No college in the country paid any attention to the non-discrimination clause on their federal contracts. No HEW investigator knocked on any administrator's door. Academic women who stood up at that time and talked of discrimination were laughed at. As Dr. Bernice Sandler of the Association of American Colleges has said, the most concrete result that has come from affirmative action efforts across the country has been the realization that discrimination does exist. The people who demanded government reviews of campus hiring and promotion practices were not uninformed outsiders; they were academic women who found that they had to fight the system to survive. Only after women's groups put pressure on Congress to put pressure on HEW and the Labor Dept. did Uncle Sam make any effort to enforce the executive order.

Lester criticizes HEW, as well he might. He says that compliance action varies from region to region and even from investigator to investigator. He says that HEW has failed to act on many of the affirmative action plans presented to them. And certainly this is true. Although Lester approaches the problem from a different perspective than do women's rights groups, the conclusions are the same. HEW has not been doing a very good job. The Women's Equity Action League (WEAL), which filed the majority of the class complaints under the executive orders, has, in fact, called periodically for an investigation of the investigators. Understaffed, underfunded, and under political pressure, HEW has accomplished very little for women and minorities. When claims of reverse discrimination started trickling in, HEW put a full-time investigator to work on them; in the meantime all individual complaints from women and minorities were referred to EEOC and put on the back burner, where many of them remain. Lester may feel that HEW is destroying higher education, but women's groups are still waiting for them to show some signs of life.

The Rutgers University situation is illustrative. A class complaint on behalf of all women faculty throughout the university was referred to the New York regional office in April of 1970. (This is the same office Lester has dealt with in his capacity as dean at Princeton.) The file is still open. The investigation has never been completed, the plan has never been approved, the findings have never been released. The much-publicized Rutgers-HEW salary settlement for hundreds of women and minority faculty was, in fact, negotiated by the AAUP with the University administration. HEW only made an effort on behalf of eight women in one college. While progress has been made in Rutgers to improve the status of women and minorities, it has been primarily done through the voluntary cooperation of the University and the persistence of the faculty collective bargaining agent. It must be noted, however, that the positive climate that allowed some forward progress to be made was generated initially by the WEAL complaint. Without the potential clout of Uncle Sam in the background, we might still be where we were four or five years ago. It must also be noted that while Lester would like to amend the Equal Pay Act again so that faculty would not be covered because unequal pay proves unequal merit, the Rutgers salary review committee, composed of University faculty and administrators, identified over 200 faculty members who had been discriminated against in their pay on bases other than merit or qualifications. Yes, Virginia, salary inequities do exist.

It is understandable why Lester, from his vantage point, cannot see the bias that those of us on the other side can see all too well. He tends to idealize faculty judgment. When superior scholar-teachers meet to review a faculty member's credentials in a democratic way, how can discrimination creep in? Perhaps he has simply never experienced the overt discrimination that others of us have. He gives the hypothetical and obviously ludicrous example of several universities bidding for the services of a female electrical engineering professor to meet their affirmative action goals. (In that goals are based on supply and the supply of female Ph.D.'s in electrical engineering is virtually nil, no reasonable person would set a short-term goal in this area.) He does not point out the existence of departments with no women in disciplines where women hold large percentages of the doctorates. In my own field, Spanish, women outnumber men up through the master's degree level and hold about a third of the doctorates. Nevertheless, when I received tenure in my department I was the first woman to do so in 205 years at that point in my career as an associate professor I still earned less money than some of the assistant professors in my own department. Lester suggests that women do not progress as rapidly as men because they have childcaring and housekeeping responsibilities. Maybe so, and maybe departments assume so and make decisions accordingly. After my son was born, I was only given my position back because I persisted and because my husband gave my department his permission. I have heard faculty colleagues seriously propose that all married women be fired to meet a cutback in lines because the women don't need the money anyway. I, who have been asked to serve coffee to the male faculty and the students at faculty-student get-togethers, simply cannot share Lester's idealism. There has been a great deal of consciousness-raising on campus in the past few years, and much of the overt bias is disappearing, but even that has only been accomplished because women faculty had laws and court decisions supporting their complaints.

Lester makes much of the difference between married and single women, suggesting that single women progress in their careers equally with men and married women just can't cope. The thrust of his argument is in direct opposition to all equal employment opportunity legislation, for he is defining an individual's capabilities by an assumption of how a particular class of people functions. Lester's documents his statement that married women are less committed to their professional growth with the statistical results of a survey of some academic women made in 1965. It is not only entirely possible that the same survey in 1974 would give different results, but it is also unreasonable to assume that all married women fall into the same pattern. The question is not how much time a married woman spends with her home and family but how much time she devotes to her professional work, and how much she gains from the time spent. The question in each case must be with the individual, not with a class to which he or she belongs. But even within the framework of classes, the study Lester cites is inadequate. Some valid conclusions might be reached if we knew how much time single men and married men spent on their personal responsibilities. Do married men, like married women, have greater obligations outside their professional lives? Where do divorced women fall into the picture? Does Lester categorize them with single women or with married women? Do married women with home responsibilities compensate by sacrificing social activities? Do they skip lunch to fit in more research time? And in Lester's careful bibliography, what happened to the studies that indicated that married women assistant professors outpublished all other classes of scholars, that single women are also promoted more slowly than men, married or single, and that department chairpersons, when evaluating credentials of equally qualified people will take the man every time?

Lester also tends to make age evaluations that run counter to equal employment opportunity legislation. He tells us at one point that a person must be productive between the ages of 25 and 35 to become qualified for a tenured position, and that, unfortunately, is the age span when women are most heavily committed to home and children. Later he tells us that a person must be productive between the ages of 35 and 45 to become a nationally-known scholar, and that, unfortunately, is the age span when women are most heavily committed to home and children. Aside from condemning women to twenty years at hard labor, he implies that there is not and cannot be in academe any room at the top for anyone who broke the lockstep academic pattern. Not only does this adversely affect women who chose to dedicate time to child-rearing, but it also discriminates against people who serve in the military, people from low-income families who had to work their way through school, people who did not discover their academic calling at the age of 18. Even Bell Telephone Laboratories, which hires only the top engineers in the country and used to judge professional staff by age group, now more fairly evaluates people by their professional age. Under Lester's system, Galileo would never have made the grade at Princeton. Nor Cervantes nor any of the other late-bloomers.

Without documentation, Lester says that women are less meritorious because they teach lower level courses, publish less, and do less research. Whether or not these assumptions are true, they deserve some discussion. Academic women claim that where these situations exist, they are frequently the end result of a discriminatory system. Women teach elementary courses not by choice but by assignment. A survey of faculty career patterns at Rutgers University did, in fact, reveal that women were just as interested as were men in teaching advanced, specialized courses. Most scholarly journals are run by male-dominated editorial boards; many academic women feel that the boards themselves are biased. Women scientists in particular complain that they are not given equal access to research facilities and therefore cannot conduct their professional work as they would like. The "old-boy" system, which women have so vigorously opposed in recruitment, extents to all aspects of academic life and will not be overcome very quickly. This is, of course, the explanation for the continuing pyramidal pattern of Soviet women in academe. Lester cites the fact that women are not equally represented at the top even in the Soviet Union as evidence that women cannot succeed, while relegating to a footnote the researcher's observation that women's progress in Soviet universities is still hampered by the professional contacts of the older male professors.

Statistics may, of course, always be interpreted differently by different people. Studies may be accepted as valid if they prove what we believe and carefully rejected if they don't. Even the most careful scholar is guilty of this kind of bias from time to time, and that is the case with Lester in Antibias Regulation of Universities—and certainly in my reading of it. Lester, as I read his work, cites page after page of studies that confirmed that women have been paid less than men in academe, then he carefully rejects all of it as not valid. On the other hand, he says that women and minorities are now being overpaid, but he documents this not at all. At one point he says that blacks are given large salary increases to lure them from dominantly black institutions to dominantly white ones, but he fails to mention that the black colleges generally have a much lower salary scale than white colleges. (The Woodrow Wilson Foundation instituted a special internship program to supplement salaries that black institutions pay so that white professors could afford to teach there!) He suggests that advertising academic vacancies is useless because women do not hold more teaching positions in Great Britain than they do here even though British universities advertise; it does not occur to him that there might still be a bias in hiring even if vacancies are advertised. He dutifully quotes some unidentified mathematicians as saying that there is only one or at most two female mathematicians in the country qualified to hold a tenured position in a major university even though up the road from Princeton at Rutgers there are five tenured women in a graduate department that considers itself very good indeed.

He repeatedly asserts that goals are meaningless because they do not take into consideration the supply factor although goals are defined on the basis of underutilization, and underutilization is determined by supply. Certainly the supply of qualified women is very limited if you look only for tenured women at major universities; but women contend that they have been underemployed—that equally qualified women are found in non-tenured positions and at less prestigious institutions because they have been denied equal opportunity in the past. The purpose of affirmative action is not to play musical chairs with the handful of women who made it at Harvard, Princeton, and Yale despite all the obstacles but to remove the obstacles so that the rest of us can play, too.

Sidney Hook, in his review of Lester's book ("The bias in anti-bias regulations," in the publication of the University Centers for Rational Alternatives," summer 1974) makes a number of excellent points, but erroneously equates affirmative action with giving women and minorities two votes to compensate for their not having the right to vote in the past. It would be a far better analogy if one equated affirmative action with the abolition of poll taxes and with a concerted effort to register new voters. No responsible spokesperson for the civil rights movement is asking for two votes or for preferential treatment. We are asking for reform.

Lester himself makes a strong case for affirmative action in education, for a concerted effort at encouraging more women and minority students to prepare for professional careers. His proposals along these lines are far more positive and potentially effective than the wishy-washy guidelines HEW has presented for enforcement of Title IX of the Education Amendments of 1972. But in a time of retrenchment in higher education, when qualified people of both sexes are having a hard time finding and keeping a position in academe, we cannot put all of our emphasis on training future professors. We must continue strong affirmative action efforts for those already qualified and we must urge graduate students to prepare for alternative careers.

This caveat aside, there is much merit in Lester's solutions, particularly with respect to arbitration of grievances and with respect to affirmative action in education. It would indeed be unfortunate if the positive contribution of his book went unnoticed because of the way in which he has outlined the problems.

UNIVERSITY OF COLORADO,
Colorado Springs, Colo., November 22, 1974.

CONGRESSMAN JAMES G. O'HARA,
Chairman, House Special Subcommittee on Education, Cannon House Office Building, Washington, D.C.

DEAR CONGRESSMAN O'HARA: I understand House Special Subcommittee on Education is holding hearings on affirmative action in higher education and secondary education.

Enclosed herewith is a copy of my article, "Reverse Discrimination in Hiring in Sociology Departments: A Preliminary Report."

I request you to include the article as part of the record of the Subcommittee hearings.

With best regards,
Sincerely yours,

BARBARA R. LORCH,
Professor of Sociology.

Enclosure:

[Reprint from the American Sociologist—Published by the American Sociological Association]

REVERSE DISCRIMINATION IN HIRING IN SOCIOLOGY DEPARTMENTS: A PRELIMINARY REPORT

(By Barbara R. Lorch)

INTRODUCTION

Federal regulations require colleges and universities to develop Affirmative Action Programs establishing goals and timetables for recruitment to assure an immediate increase in the percentage of women and minority faculty and staff.[1] The Department of Health, Education and Welfare is responsible for accepting and rejecting the programs proposed by individual academic institutions and for enforcing rules that they have developed and call "guidelines." Loss of federal funds is a penalty for lack of compliance.

---

[1] In this article the HEW definition of minority groups will be used and will refer to blacks, Spanish-surnamed, Asians and American Indians.

With the entrance of HEW and their Affirmative Action Plans on campuses throughout the United States has come the claim of increased hiring of women and minority group members and also the cry of reverse discrimination.

Some knowledge about the possible extent of reverse discrimination should be of importance to the profession of sociology and is a first step toward a meaningful discussion about ways in which the goal of reducing discrimination and increasing the employment opportunities for women and minorities in academic institutions can best be accomplished. J. Stanley Pottinger, director of the Office of Civil Rights in the U.S. Department of Health, Education and Welfare states that there is "little if any evidence" that reverse discrimination exists.[2] If it is occurring to any extent and if we are indeed sincere in our desire to reduce discrimination, a start might be a re-examination of the policies and administration of Affirmative Action Programs and of suggestions made for the improvement of such programs.

Although I have heard and read of specific cases of reverse discrimination, I am not aware of any systematic research to determine the extent to which such discrimination may be occurring. I therefore designed a short questionnaire to investigate the occurrence of reverse discrimination in sociology departments in the United States.

In November 1972 I sent an anonymous questionnaire to sociology department chairmen located at 200 four-year colleges and universities in the United States. These 200 were obtained by simple random sampling of all four-year colleges and universities in the United States listed in *The 1972 World Almanac*, published by the *Rocky Mountain News*. One hundred and sixty-two (81 percent) of the department chairmen returned the questionnaire.[3] The high return rate gives some indication of the interest in this topic. Below is a preliminary report of the findings. A more thorough analysis will be completed later.

DESCRIPTION OF THE SAMPLE

Of the 162 returned questionnaires, 19 percent came from colleges and universities having over 20,000 students, 30 percent from those with 10,000 to 19,999 students, 36 percent from those with 5,000 to 9,999 students and 15 percent from those with a student enrollment under 5,000. Seventy-one percent were public institutions and 29 percent private. The Ph.D. degree was the highest degree in sociology offered in 39 percent of the institutions, the Master's degree in sociology in 29 percent, the B.A. degree in sociology in 31 percent and one institution offered no degree in sociology at all—only a minor.

Eighty-four percent of the department chairmen stated that their colleges or universities had an Affirmative Action Plan, 6 percent stated that their institutions had no Affirmative Action Plan and 10 percent stated that they didn't know whether their institutions had such a plan or not.

HEW GUIDELINES CONCERNING AFFIRMATIVE ACTION PROGRAMS IN ACADEMIC INSTITUTIONS

Ninety-five percent of the sociology department chairmen reported that they were either very familiar or somewhat familiar with the HEW guidelines (43 percent very familiar and 52 percent somewhat familiar), and only 5 percent reported that they were not at all familiar with HEW guidelines for colleges and universities concerning the hiring of women and minorities.

Below are some excerpts from the HEW guidelines for Affirmative Action Programs, August 14, 1972:

> To design an effective affirmative action plan the contractor must first establish a basic data file on employees including name or identification number, sex, ethnic identification, current salary, current job, family and title, years in current job and employment status.
>
> A unique aspect of equal employment opportunity under the executive order is the required compilation of availability data on women and minorities for use as a measure of the contractor's equal employment opportunity.

---

[2] *Los Angles Times*, Friday, January 12, 1973, Part 11, p. 1.

[3] One returned questionnaire was discarded and not included in the 162 mentioned above because the respondent stated that no course work in sociology was offered at that institution.

> For academic employees the basic national data on earned doctors degrees will provide the basis for utilization analysis of a contractor's work-force, unless the contractor can otherwise demonstrate that the labor market upon which it draws is significantly different from this base.
>
> A contractor must examine recruitment activities and policies of each unit responsible for recruiting. Where such an examination reveals a significantly lower representation of women or minorities in the applicant pool than would be reasonably expected from their availability in the work-force, the contractor must modify or supplement his recruiting policies by vigorous and systematic efforts, to locate and encourage the candidacy of qualified women and minorities.
>
> Affirmative action requires the contractor to do more than ensure employment neutrality with regard to race, color, religion, sex, and national origin. As the phase implies, affirmative action requires the employer to make additional efforts to recruit, employ and promote qualified members of groups formerly excluded, even if that exclusion cannot be traced to particular discriminatory actions on the part of the employer.
>
> Affirmative action in hiring and promotion simply means that in departments or other employment units where employment opportunities traditionally have not existed for women and minorities, so that their presence is significantly less than their availability, they must be recruited, hired, and promoted over all competitors where their qualifications are the same as or better than those of other applicants.

In almost direct contradiction to the above guidelines is another excerpt from HEW guidelines for Affirmative Action Programs, August 14, 1972:

> Contractors agree when contracts are signed that they will not discriminate and that they will take affirmative action to see that employees are treated without regard to race, color, religion, sex or national origin.

CIVIL RIGHTS ACT OF 1964 CONCERNING DISCRIMINATION BECAUSE OF RACE, COLOR, RELIGION, SEX, AND NATIONAL ORIGIN

Nearly identical percentages were obtained on the familiarity of department chairmen with the Civil Rights Act of 1964 as for their familiarity with the HEW guidelines concerning the hiring of women and minorities at academic institutions. Ninety-seven percent stated that they were either very familiar or somewhat familiar with the Civil Rights Act of 1964 (40 percent very familiar and 57 percent somewhat familiar), and only three percent stated that they were not at all familiar with the Civil Rights Act of 1964.

Here are some pertinent excerpts from Section 703 of Title VII of the Civil Rights Act of 1964 in which preferential hiring would appear to be expressly forbidden:

> (a) It shall be an unlawful employment practice for an employer:
>
> (1) to fail or refuse to hire or to discharge any individual, or otherwise to discriminate against any individual with respect to his compensation; terms, conditions, or privileges of employment, because of such individual's race, color, religion, sex, or national origin; or
>
> (2) to limit, segregate, or classify his employees in any way which would deprive or tend to deprive any individual of employment opportunities or otherwise adversely affect his status as an employee, because of such individual's race, color, religion, sex, or national origin.

The use of quotas, or goals and timetables, for the recruitment of women and minority members are not called for in the Civil Rights Act of 1964. See (j) below:

> (j) Nothing contained in this title shall be interpreted to require any employer, employment agency, labor organization, or joint labor-management committee subject to this title to grant preferential treatment to any individual or to any group because of the race, color, religion, sex, or national origin of such individual or group on account of an imbalance which may exist with respect to the total number or percentage of persons of any race, color, religion, sex or national origin employed by any employer, referred or classified for employment by any employment agency or labor organization, admitted to membership or classified by any labor organization, or admitted to, or employed in, any apprenticeship or other training program, in comparison with the total number or percentage of persons of such race, color, religion, sex, or national origin in any community, State, section, or other area, or in the available work force in any community, State, section, or other area.

Although HEW has changed its terminology from "quotas" to "goals" and "timetables," the meaning appears to be exactly the same.

COMPARISON OF HEW GUIDELINES AND THE CIVIL RIGHTS ACT OF 1964

The Civil Rights Act of 1964 seems to be perfectly clear on the illegality of giving preferential treatment in hiring on the basis of sex, race, color, religion or national origin. The printed HEW guidelines are by no means as clear on this matter. Although reference is made to disregarding sex, race, color, religion and natural origin in matters of employment, there are repeated contradictions. A few examples are provided below.

(1) Underutilization in employment is determined by HEW by comparing the percentage of women and minorities at the academic institution with their respective percentages in the academic national labor pool. If there is a discrepancy, HEW calls this a "deficiency," and the goals and timetables of that institution's Affirmative Action Plan are adjusted to correct the "deficiency" by bringing the number or percentage up to that in the national labor pool. Whether you call this "quotas," or "goals and timetables," it is contrary to the Civil Rights Acts of 1964 and also to the HEW guideline that states that contractors agree when contracts are signed that they will not discriminate and that they will take affirmative action to see that employees are treated without regard to race, color, religion, sex or national origin.

(2) HEW guidelines state that where the presence of women and minorities is significantly less than their availability, they must be recruited, hired and promoted over all competitors where their qualifications are the same or better than those of other applicants. This obviously gives preference to women and minorities and again is contrary to the Civil Rights Act of 1964 and the HEW guideline stated at the end of the previous paragraph.

(3) In order to recruit and hire women and minorities over all competitors where their qualifications are the same or better than those of other competitors, minority group members must be identified and classified by their minority group and sex and this identity used in the hiring process. This is again opposed to the Civil Rights Act of 1964 and the HEW guideline stated in the first example.

(4) Vigorous and systematic efforts to locate and encourage the candidacy of qualified women and minorities without similar vigorous efforts to locate candidates of all social categories is also discriminatory.

FINDINGS

The intended or unintended consequence of the HEW guidelines (in addition to employing more women and minorities than previously, many of whom are highly qualified) has been in some cases to coerce the administration of academic institutions (in fear of losing federal funds) to in turn coerce academic departments to give preference in their hiring to women and minorities. The result in some cases has been reverse discrimination. This is clearly contrary to the Civil Rights Act of 1964, to the equal protection and due process clauses of the United States Constitution, to Executive Order 11246 and to some of the explicit statements within the HEW guidelines as well.

Sociology department chairmen, in response to the question, "Do you believe that to follow HEW guidelines concerning the hiring of women and minorities would force you to act contrary to the Civil Rights Act of 1964?", responded as follows: Seventeen percent marked "yes," 44 percent marked "no" and 39 percent marked "don't know." Although some 95 percent of these people indicated familiarity with both the Civil Rights Act of 1964 and the HEW guidelines, the fact that 39 percent indicated that they didn't know whether following HEW guidelines concerning hiring of women and minorities would force them to act contrary to the Civil Rights Act of 1964 shows confusion and lack of being able to clearly interpret either the Civil Rights Act of 1964 or the HEW guidelines. Seventeen percent indicated that they felt that to follow HEW guidelines concerning the hiring of women and minorities would force them to act contrary to the Civil Rights Act of 1964. Litigation will undoubtedly settle this issue in time.

Of the 162 department chairmen who responded, 35 percent indicated that their departments had formally determined a priority list for the hiring of women and minorities.

One hundred and thirty nine of the 162 respondents stated that their departments had been in a position to hire faculty members within the last two years.

Of these, 44 (32 percent) reported that they felt coerced to hire a woman or a minority member regardless of whether he or she was the best candidate for the job.

Those chairmen who felt coerced indicated various sources of the coercion which are found in Table 1. The most frequently mentioned source of coercion was the administration of their institution.

TABLE 1.—*Source of coercion of sociology department chairmen*[1]

Source of coercion	*Number*
Administration	34
Colleagues in one's own department	16
Student groups	11
Community groups	11
Other	8

[1] More than 1 source could be listed.

The form of coercion indicated by respondents is given in Table 2. The most frequently mentioned forms of coercion were formal and informal pressure from the administration of their institution.

TABLE 2.—*Form of coercion of sociology department chairmen*[1]

Form of coercion	*Number*
Pressure from the administration in the form of a policy concerning the hiring of women and/or minorities	19
Informal pressure from the administration	18
Informal pressure of colleagues in one's own department	14
Fear of loss of the position if a woman or minority member were not hired	14
Pressure from the department in the form of a general policy concerning the hiring of women and/or minorities	10
Fear of negative student reaction	7
Fear of negative community groups' reaction	1
Other	6

[1] Respondents could mark as many as applied.

In recent years many faculties have won the right to be primarily responsible for hiring in their own disciplines. The above tables indicate the renewed entrance of the administration as a crucial force in the determination of such matters. This has undoubtedly been largely due to HEW's intrusion into faculty hiring.

The 139 department chairmen who were in a position to hire faculty in the last two years were presented with the question, "Has your department in the past two years bypassed the best candidate for a position in order to hire a woman or a minority member?"; 22 (16 percent) marked "yes," 15 (83 percent) marked "no," and two reported "don't know." The reason for the "don't know" response in these two cases was that these departments only solicited applications from women and minorities. The highly selective recruitment, which itself is evidence of discrimination against other categories of candidates, makes it impossible to know whether better candidates were by-passed.

The fact that 32 percent of the department chairmen *felt coerced* to hire a woman or a minority member regardless of whether he or she was the best candidate while only 16 percent *did in fact* practice reverse discrimination was reported to be caused by several varied circumstances. In some cases the coercion was resisted; in others the woman or minority group member turned down the offer of the department and it then turned to its best candidate who was an Anglo male; in some cases the best candidate for the job was a woman or a minority group member; in some cases women and minority candidates for the position could not be solicited because of the short supply of such candidates.

In view of the limited supply of women and minority sociologists[4] and the difficulty in locating them[5] which in turn limits the applicants for academic positions and thus the opportunity for reverse discrimination, the extent of reverse dscrimination is surprisingly high. I do not have information on the exact number of applicants by sex and racial and ethnic identity for each of the cases in which departments in this study hired a person, since HEW has only recently required departments to keep such information. This data will be available for future research.

---

[4] Maurice Jackson in an article "Minorities and Women in Sociology: Are Opportunities Changing?" (1972:3) gives a rough indication of the percentage of women and minority sociologists during the time period of the study. The Ph.D.s in Sociology granted to women and minorities in 1970 and granted or expected in 1971 are as follows: Women—21 and 24 percent in 1970 and 1971 respectively; Blacks—3 and 4 percent in 1970 and 1971 respectively: Asians—1.0 and 0.3 percent in 1970 and 1971 respectively: Chicanos 0 and 0.3 percent in 1970 and 1971 respectively and 0 for Indians and Puerto Ricans for 1970 and 1971 respectively.

It is interesting to note that more sociology department chairmen believe that reverse discrimination is occurring in other departments in their colleges and universities than in their own. Forty-six percent responded "yes," 45 percent "no" and 9 percent "don't know" to the question "Do you believe that reverse discrimination is occurring in other departments in your college or university?"

DISCUSSION

The fact that 32 percent of the sociology department chairmen who indicated that they had positions to fill in the past two years felt coerced to practice reverse discrimination, and 16 percent reported that they actually did, is reason for grave concern. Surely no one can deny the importance of improving the opportunities for empolyment of women and minorities in academic institutions and in doing everything possible to remove whatever discrimination that is presently occurring in the hiring of women and minorities. But discrimination is removed by nondiscrimination, not by added illegal discrimination. Under the Supreme Court's consistent interpretation of the equal protection and due process clauses of the U.S. Constitution, and in light of the plain language of the Civil Rights Act of 1964, hiring should be based solely on qualifications disregarding sex, race, color, religion and national origin. The Affirmative Action Programs, as administered at the time of this research, involve a collision of rights and principles, and in a number of cases are a major factor in coercing department chairmen in academic institutions not only to lower their employment standards and to engage in discrimination, but also to break the law.

If the goal is to reduce discrimination, then we should be as concerned about discrimination against Anglo males, for example, as against women and minority members. Surely ways can be found to increase the employment opportunities for women and minorities without promoting reverse discrimination.

AFFIRMATIVE ACTION IN ACTION

(By Edgar F. Borgatta of Queens College)

The stimulus for the brief research reported here was the coverage of "Affirmative Action" in several letters in the ASA Footnotes August 1973 issue, but particularly the Committee on the Status of Women in Sociology protest concerning an earlier aricle (May 1973) reprinted from the *Washington Post* titled "Reverse Bias Alleged in College Hiring." The CSWS protested that the article gave the "impression that affirmative action is discriminatory," had a "pernicious main thrust," and was a "gratuitous insertion of inflammatory material." While this is an age of posturing and using of "rhetoric," the protest of the CSWS may still seem "way out" to some. In any event, at the suggestion of the CSWS a statement by Bernice Sandler was reprinted (referred to below) which served as a reference point to gather some information from sociologists on their experience with Affirmative Action. This research was initiated with the knowledge of an overlapping research in progress (Lorch 1973).[1]

---

[5] Jackson (1972:4) states that 63 percent of the sociology departments in his survey had difficulty in locating minority candidates and 25 percent had difficulty locating women candidates.

[1] Barbara R. Lorch, "Reverse Discrimination in Hiring in Sociology Departments: A Preliminary Report," *American Sociologist* 8 (August): 116–120.

THE QUESTIONS ASKED

A one page questionnaire was devised and sent with an accompanying letter reading as follows.

"In the August 1973 issue of Footnotes some question is raised about the meaning and operation of 'Affirmative Action' on campuses. At the request of the ASA Committee on the Status of Women in Sociology, a brief article was reprinted, the critical paragraph of which is noted below. In the same issue, Joan Huber, President, SWS, asks for facts, and the enclosed brief survey is designed to get a few of these. I hope you will cooperate by completing the enclosed and returning it as soon as possible. We have a number on your form as a checkoff to determine from whom we have received answers. Naturally, all information will be treated confidentially and data will only be reported in statistical form. We will appreciate any comments on the topic you may add."

"If institutions give preference to less-qualified women and minorities over better-qualified white males, then such institutions are violating the very laws and regulations they are seeking to observe. There is a distinction between affirmative action and preference, the latter being a clear violation of Executive Order 11246, Title VII of the Civil Rights Act, and the 14th Amendment," (Sandler 1973).[2]

In determining what questions could be asked of staff and faculty, the implied meaning of preference derived from the statement by Sandler was taken as the key. Preference, it would appear, could be extended in several ways. One way would be to open the position only for certain people. Question 1 was directed to get such information in one form: "During the last three years, have you (has your department) received any communication from your administration to the effect that positions would be made available (added, replaced or not deleted in the budget) if an acceptable candidate from a minority group could be found?" As was pointed out by several persons who sent back questionnaires with comments, it would be possible to get the formal statement made by the administration on Affirmative Action. Those who have some knowledge of what goes on in departments and universities recognize that many things are carried out informally. Thus, interest was on the experience of the chairman, and, presumably, information as it is socialized to other staff members.

Preference may be suggested by the administration, also, in a more general way beyond controlling the position that is the "increment" for the department. Question 3 was designed to get at this: "During the last three years, have you (has your department) received any communication from your administration, formally or informally, to seek out and give preference to candidates of minority groups in filling positions, i.e., not treat one or more of the positions as open to all comers on a competitive basis?"

Another approach to information on preference could be directed specifically to hiring experience in the department. Aside from whatever the administration's implied or actual policy was, what did the department do? Question 2 deals with this: "During the last three years, has any candidate been sought out preferentially (non-competitively) because of sex, race, national origin, or other arbitrary characteristics (assuming, of course, the person was presumed to have acceptable qualifications as a sociologist)?" It would seem clear that in responding "yes" to this question we would have a statement of attempted preferential hiring.

An alternate approach to experience deals with the kinds of inquiries that individuals may have had from other institutions with regard to hiring practices. Thus, we asked the following question. (#4): "During the last three years, have you (or has the staff member in charge of answering requests about your students and faculty who are entering the market) received any requests which explicitly or implicitly indicate ~~that~~/ preference in filling a position will be given (non-competitively) to a person of minority group status?"

Finally, we asked for a report on what Affirmative Action meant on the campus, and since if there are formal statements, they are relatively likely to be complex, three were composed that might span the range of directive that might be encountered. The entire question (#5) is noted below:

"In your opinion, which of the statements below represents the interpretation of Affirmative Action on your campus according to actual procedures (and the explicit or implicit support of your administration)?

---

[2] Bernice Sandler, "Male vs. Female: A Bread-and-Butter Issue," *Chronicle of Higher Education*, February 5, 1973. Reprinted in *Footnotes*, August 1973, page 8.

1. Affirmative Action requires special attention to finding some minority group candidates, with the objective of preferentially hiring them if the (minimum acceptable) standard of the department of the school can be satisfied.

2. Affirmative Action requires special attention to finding minority group members in the recruitment process so that they can be evaluated with other candidates, but preference in selection is to be given to some minority group members among candidates who are acceptable to the department and school if this is the only way to add minority group members to the department.

3. Affirmative Action requires that attention be given to locating all possible candidates for a position; including those of minority group status, but once the inclusive recruitment base is established only the factors related to academic potential and excellence are to be used."

One additional statement could have been phrased between numbers, 2 and 3, but in discussion with a number of persons, it was decided to leave it out as too much of a "hedge." This would be the statement that says that Affirmative Action requires locating all possible candidates for the position, including those of minority group status, and when the choice is between two equally good candidates, the preference should be given to the minority group member. One possible reason this was omitted was that the weight of most discussions included the fact that minority group status was often included in the initial rating and ranking of candidates. However, this was not the major reason for omitting the question. Rather, it was the almost universal response in the discussions to the effect that one never really ends up with a tie among candidates for a position, although if one uses a minimum standard a number may satisfy the minimum. Possibly this was an error in strategy in getting information, but it is doubtful that the additional alternative would have altered the results.

SELECTION OF SAMPLE

The sample was selected from the ASA *Guide to Graduate Departments of Sociology*, 1972–73. For various reasons a relatively small sample was selected as follows. For every even page corresponding to a department, a questionnaire was sent to the Chairman. In the same Department, the (non-chairman) female with the highest rank, if one was listed in the department, also was sent a questionnaire. Then, a third departmental member with a male name having the same rank as the female was selected arbitrarily. The clerk carrying out the selection appeared to have no difficulty with the instructions. Queens College, was omitted, and thus a total of 78 questionnaires were sent to Chairmen (white form), 60 to female (pink form) and 60 to male (blue form) staff, a total of 198 questionnaires. The mailing was on August 29, 1973, timed so that presumably the questionnaires would be at the departmental offices of the respondents when they returned from the ASA meetings or for the new semester. The usable responses were 65 for chairman, 38 for females and 34 for males as of October 12.[3] In addition, two questionnaires were returned undelivered and four were returned with comments but no responses marked.

RESULTS

Table 1 presents the basic distribution of responses for the Chairmen, Female Staff, and Male Staff. On question 1, 37 percent of the Chairmen answered "yes" and percentages of the other categories are similar. From the point of view of Affirmative Action involving addition, replacement, or non-deletion in the budget if an acceptable candidate from a minority group could be found, a substantial portion of the respondents report that within the last three years communication had been received from their administration to the effect that positions would be made available. This, then, presumably means that the positions would not be available on an open and competitive basis to all comers, and preferential allocation of positions would be occurring.

The second question was focused directly on whether in the last three years any candidate had been sought out preferentially (non-competitively because of sex, race, national origin, or other arbitrary characteristics), assuming, of course, the person was presumed to have acceptable qualifications as a sociologist. Again, on this question the Chairmen responses appear to be similar to those of the other respondents. Forty percent of the Chairmen reported such preferential, non-competitive attempts to locate candidates because of sex, race, national origin, or other characteristics. This, of course, is a direct statement that Affrmative Action has been interpreted to mean preferential seeking out of candidates.

---

[3] Thanks are due to the respondents, and special appreciation is noted for the many comments which could, easily and usefully, fill a book.

The third question, dealing with receiving direction from the college or university administration to seek out and give preference to minority groups in filling positions received fewer "yes" responses except for the male staff. Among the chairmen, 23 percent answered "yes" to this question. Since the words "formally or informally" are included in the statement, conceivably many of these communications arrived informally, and thus answers may depend more on the interpretations of the respondents than the prior two questions.

TABLE 1.—DISTRIBUTION OF RESPONSES

[In percent]

	Chairman (N=)	Female staff (N=38)	Male staff (N=34)
Question 1.—Administration opening up positions for minority candidates:			
0			6
1	37	39	35
2	18	18	26
3	45	45	32
Question 2.—Preferential hiring by department:			
0	2		3
1	40	42	47
2	15	11	18
3	43	47	32
Question 3—Communication from administration giving preference to minorities:			
0	2	8	3
1	23	24	38
2	8	18	15
3	68	50	44
Question 4—Inquiries indicating preference for filling positions with minority persons:			
0	2	11	6
1	57	26	38
2	9	16	21
3	32	47	35
Question 5—Interpretations of affirmative action:			
0	3	3	3
1	15	13	24
2	23	42	32
3	58	42	41

Note: 0—Blank or D.K.; 1—Yes, or 1st alternative on Q 5; 2—Possibly, or 2d alternative on Q 5; 3—No, or 3d alternative on Q 5.

Question 4 is the one on which the experience of respondents may be seen potentially to differ most as it is probably most directly affected by position in the department; the Chairman gets many personnel inquiries and Chairman more often report the experience of receiving requests which explicitly or implicitly indicate that preference in filling a position will be given (non-competitively) to a person of minority status, the percentage being 57 percent. An example of an explicit statement might read: "Mount Holyoke College is seeking a black sociologist . . ." Implicit statements might again be subject to considerable interpretation by respondents.

Finally, Question 5 deals with the interpretation of the Affirmative Action orientation on the respondent's campus. In different degrees of preferenial definition, statements 1 and 2 indicate Affirmative Action requires preferential selection. Here we find that the chairmen most closely interpret Affirmative Action as merely requiring the most inclusive recruitment base, which means including, with some deliberate concern, minority group candidates. Still thirty-seven percent of Chairmen indicate that Affirmative Action on their campuses means giving preference in selection in some degree. The other staff responding to this question appears to have a stronger impression that Affirmative Action means preference in selection, with over 50 percent of both Male and Female staff answering "yes" to statements 1 or 2.

CONCLUSION

In summary, with whatever limitations this abbreviated research may have, it is doubtful that any conclusion can be reached other than that in a large proportion of academic institutions Affirmative Action has meant giving preference to women and minorities, and, in the words of Bernice Sandler, *violating the very laws and regulations they are seeking to observe.* In corroboration of the findings of this study, another report recently appeared with findings that 35 percent of responding chairmen from a broader sample of institutions indicated that their departments had formally determined a priority list for the hiring of women and minorities (Lorch 1973). Other findings in Lorch's article, as well as the discussion of issues, should be interesting to those concerned with the problems of discrimination in the academic professions.

STATEMENT BY PETER E. HOLMES, DIRECTOR, OFFICE FOR CIVIL RIGHTS, U.S. DEPARTMENT OF HEALTH, EDUCATION, AND WELFARE

[Note: The following memorandum was mailed out on December 11, 1974:]

We are releasing today a memorandum which provides to the nation's colleges and universities additional guidance to help them fulfill their affirmative action responsibility.

Under the law (Executive Order 11246, as amended) institutions of higher education which hold government contracts or subcontracts are required to take affirmative action to ensure that minorities and women have equal opportunity to employment and are treated equally as employees. Colleges and universities must implement acceptable affirmative action plans to give practical effect to this commitment.

The memorandum reiterates the principle that colleges and universities are entitled to select the most qualified candidate, without regard to race, sex or ethnicity, for any position. Further, it makes clear that colleges and universities, not the Federal Government, determine what constitutes qualification for any particular position.

The memorandum is designed to encourage the adoption of sound and effective action measures by providing practical advice in the following areas:

Proper means of recruitment for vacancies.

Application of job requirements without regard to race, sex, or national origin.

Use of job-related employment standards.

Collection of necessary data.

A major objective of the affirmation action obligation is to broaden an institution's pool of applicants so that qualified women and minorities will have an equal chance to be considered for employment and promotion. The memorandum seeks to distinguish between impermissable recruitment devices and sound, unbiased procedures which ensure that minorities and women are in fact notified of job openings and considered for positions on an equal basis.

Second, affirmative action provides that job requirements must be applied uniformly to all candidates for a particular position. There is no obligation to waive or lower such requirements in order to attract women and minority candidates and, indeed, the Executive Order expressly prohibits such differential treatment.

Third, the affirmative action obligation does not require a college or university to eliminate or dilute legitimate employment standards. If such standards work to exclude women or minorities as a class, however, the institution must demonstrate that they are clearly related to job performance.

Fourth, in order to be able to implement and monitor affirmative action steps, institutions must collect and analyze data on the race, sex, and ethnic identity of applicants for employment. There are appropriate means of ascertaining and applying such information on applicant flow without violating confidentiality or unduly risking abuse.

In short, the memorandum clarifies certain aspects of the affirmative action obligation which have been subject to persistent misinterpreation or misapplication. We hope that this more specific treatment of the issues will prove helpful to colleges and universities as they work with us to prepare and implement effective plans.

As set forth the provisions in the memorandum do not depart from existing regulations or policy. Rather, they re-affirm the affirmative action commitment by describing and exemplifying measures which should be either undertaken or avoided to meet that commitment

In the public sphere, the concept of affirmative action is still misunderstood and widely questioned. We also hope, therefore, that the memorandum will serve to stimulate public support by laying misapprehensions to rest and by deterring the kind of employment abuse that undermines good faith compliance and complicates our job of enforcement.

Department of Health, Education, and Welfare.
Washington, D.C., December 1974.

Memorandum to College and University Presidents

The Office for Civil Rights (OCR) has responsibility for the enforcement of Executive Order 11246, as amended, with respect to employment at colleges and universities which hold Federal contracts. Under the Executive Order, Federal contractors, including institutions of higher education, are prohibited from discriminating against any person on the basis of race, color, religion, sex, or national origin in recruitment, selection, promotion and any other employment practices and procedures. Further, contractors are required by the Executive Order to "take affirmative action to ensure that applicants are employed, and that employees are treated during employment, without regard to their race, color, religion, sex, or national origin." (Section 202(1)) Such affirmative action should be designed to expand employment opportunities for women and minorities and to eliminate those policies and practices which have had the effect of excluding or limiting female and minority group employment.

Further, under Title VI of the Civil Rights Act of 1964 and Title IX of the Education Amendments of 1972, both of which are within the compliance jurisdiction of the Office for Civil Rights, educational institutions which are recipients of Federal financial assistance must ensure nondiscrimination. Under Title VI the recipients of Federal financial assistance may not discriminate on the basis of race, color, or national origin. Title VI prohibits employment discrimination only to the extent that such discrimination tends to exclude individuals or deny them the benefits of Federal financial assistance. With certain exceptions, Title IX prohibits discrimination based on sex in federally assisted education programs or activities. It extends to all employment practices of a covered institution. While the Executive Order coverage is extended only to those institutions which are Federal contractors, Title VI and Title IX reach all of the nation's higher education institutions which receive Federal financial assistance. Whereas affirmative action in employment is expressly required under the Executive Order, even in the absence of a finding of specific discrimination by the institutions, it is not required under Title VI or Title IX. However, voluntary affirmative action is *permitted* under both Title VI and Title IX ". . . to overcome the effects of conditions which resulted in limiting participation by persons of a particular race, color, national origin, or sex."

It should be noted that where there has been a specific finding of discrimination under the Executive Order, Title VI or Title IX, specific remedial or corrective action is required. Remedies in these cases are tailored to the specific wrong which has occurred. This memorandum is not intended to apply to corrective actions undertaken pursuant to a specific finding of discrimination.

This Office, in October 1972, issued *Higher Education Guidelines* which set forth the compliance responsibilities of colleges and universities under the Executive Order. In the time during which the *Guidelines* have been in effect, OCR has been faced with determining the permissibility of many common practices designed to distinguish such positive steps from others which might conflict with nondiscrimination requirements.

At the outset, certain general principles should be made clear. Colleges and universities are entitled to select the most qualified candidate, without regard to race, sex, or ethnicity, for any position. The college or university, not the Federal Government, is to say what constitutes qualification for any particular position. No single appointment will be objected to where those not appointed are less well-qualified than the candidate actually selected.

I. RECRUITMENT FOR EMPLOYMENT VACANCIES MUST BE UNDERTAKEN WITHOUT DESIGNATION OR IDENTIFICATION BY RACE, SEX, OR ETHNICITY

As defined on page five of the *Guidelines*, "[r]ecruitment is the process by which an institution or department within an institution develops an applicant pool from which hiring decisions are made." As indicated on page six of the *Guidelines*, a contractor must make an explicit statement of its commitment to equal employment opportunity in all recruiting announcements and advertisements, and it may do so by specifying that it is an "equal opportunity employer." There is a caveat:

"It is a violation of the Executive Order, however, for a prospective employer to state that only members of a particular minority group or sex will be considered."

A major purpose of the affirmative action provision of the Executive Order is to broaden the pool of applicants so that women and minorities will be considered for employment along with all other applicants. The affirmative action process must not operate to restrict consideration to minorities and women only. Acceptable nonrestrictive language designed to broaden the pool of applicants would be: "The English Department of X University is subject to the requirements of Executive Order 11246 and is an affirmative action employer. All interested persons are encouraged to apply."

It would, however, be unacceptable to state that "women and minorities are preferred" or "this is an affirmative action position." Status as a member of any specific group should not be mentioned in any advertisement as preferred.

The type of announcement which identifies the category of applicants who will be considered on the basis of race/or sex would be unacceptable because it has the effect of discouraging the candidacy of other categories of persons. Therefore, it would be unacceptable for an announcement to read: "Pursuant to our affirmative action plan establishing goals for the employment of women and minorities, the English Department of X University is seeking to fill this position with a woman."

Of course, under the Executive Order, all employment advertising must contain a statement that the institution is an equal opportunity employer.

It has been suggested that a position might be designated on the basis of race or sex in order to meet an employment goal. This would be in violation of the nondiscrimination provisions of the Executive Order.

The following case represents an example of an improper interpretation of the affirmative action obligation:

"For the past four years, the Mathematics Department of X University has been operating under an affirmative action program. Although its goal for hiring women was established at 20 percent over a five-year period, during the past four years, each of four vacancies has been filled by a male. At an annual professional association conference, the department chairman informed a male applying for a fifth vacant position that he could not be given consideration regardless of his qualifications because Federal regulations require the department to fill the position with a woman."

The Mathematics Department has violated its equal employment opportunity obligations by designating the vacancy as a position for a woman, or as one in which a woman would be preferred, thereby excluding all other categories of applicants from consideration. Such action is forbidden by the Executive Order, and it is improper to suggest or to act on the assumption that Federal affirmative action provisions require that any particular position be filled by a woman or minority person.

The Mathematics Department has misunderstood the nature of goals. Goals are good faith estimates of the expected numerical results which will flow from specific affirmative actions taken by a college or university to eliminate and/or counteract factors in the university's employment process which have contributed to underutilization of minorities and women in specific job categories or resulted in an adverse disproportionate impact in terms of promotion, compensation and training of currently employed minorities and women. They are not rigid and inflexible quotas which must be met. Nor should a university strive to achieve goals as ends in themselves, for "[n]o contractor's compliance status shall be judged alone by whether or not he reaches his goals and meets his timetables. Rather, each contractor's compliance posture shall be reviewed and determined by reviewing the contents of his program, the extent of his adherence to this program, and his good faith efforts. . . ." (41 Code of Federal Regulations, Sec. 60-2.14, known as "Revised Order No. 4")

The Mathematics Department must be able to demonstrate clearly that it has adhered to its affirmative action obligation by making a full and good faith effort to recruit and consider women for each of the five vacancies. If the Department is able to make this demonstration, its inability to meet its employment goal would not be deemed a violation of its affirmative action obligation. However, a failure by the Mathematics Department to make a sufficient good faith effort to recruit and consider women and minority candidates for the four earlier openings would constitute a violation of the Executive Order regulations.

As noted on page seven of the *Guidelines*, minorities and women are often sought to fill positions in women's and ethnic studies programs. Consider the following example, which would constitute a violation of the Executive Order:

"A job description for an instructor position for a University's Black Studies Program, included, as job requirements, the ability to bring special insights to the course material and the ability to relate well to the large number of black students attracted by the program. The Dean of Arts and Sciences decided that only a black person could meet these requirements. When questioned by a white applicant, the Dean defended the selection of a black person on the grounds that race was a necessary element for the proper performance of the job."

While the university established job requirements to answer what it deemed as its special need for the Black Studies Program, its actions amounted to giving exclusive consideration of candidates on the basis of race. Such action results in the restriction of the applicant pool and is a violation of the Executive Order.

In this case, the job requirements themselves (ability to relate to students, special insights, etc.) do not limit the applicant pool on the basis of race and do not by their own terms prohibit non-minorities from applying or being employed. However, it is the university's assumption that only a black person can meet the job requirements and serve as an instructor in a successful Black Studies Program which brings the university into violation of the Executive Order.

II. IF AN INSTITUTION HAS FAILED TO FOLLOW ITS AFFIRMATIVE ACTION RECRUITMENT PROCEDURE OR IF ITS RECRUITMENT EFFORTS DO NOT YIELD AN EXPANDED APPLICANT POOL, THE RECRUITMENT PERIOD FOR ALL CANDIDATES MAY BE EXTENDED.

The *Guidelines*, on pages 5–7, set forth a specific framework to which the recruitment process should conform. An institution or institutional department must develop a nondiscriminatory applicant pool from which hiring decisions are made, and failure to do so constitutes a violation of the Executive Order. Consider the examples which follow:

> A. The psychology Department of X University was given a period of two months to fill a vacany on its clinical teaching staff. Prior to beginning its recruitment efforts, the Department received the unsolicited application of a qualified white male applicant, and made no further efforts to recruit for the position. Shortly before the two-month period was up, the nomination was sent to the Vice Chancellor for approval as a choice candidate. On the advice of the affirmative action monitoring committee, the Vice Chancellor rejected the nomination on the ground that the Department had failed to make adequate attempts to reach female and minority applicants, and required that the recruitment search be reopened and extended for another month.

The obligation to take specific steps to recruit applies even in instances where a university has not previously made a practice of active recruiting. Hence, even though it had received an unsolicited application from a person who was qualified, the Department's failure to recruit and consider women and minorities constitutes a violation of the Executive Order. In such case, further action is required under the Executive Order and the Vice Chancellor's decision to extend the period for recruitment does not amount to an abuse of the affirmative action process with respect to the Department's first choice, who will be subjected to greater competition for the job.

> B. In seeking to fill an academic position, the English Department took the recruitment steps required under its affirmative action plan. At the end of the recruitment period, during which time it had not received the applications of any women or minorities, the Department nominated one of the white male applicants as its first choice. Although the Vice Chancellor noted that good faith efforts to recruit women and minorities had been made, he required the Department to extend the recruitment period for another month during which period additional specified efforts were to be made to reach available women and minority applicants.

In carrying out an affrmative action plan, the period for recruitment may be extended, particularly where a utilization analysis indicates that the percentage of women and minorities recruited is substantially less than the percentage of qualified women and minorities available in the work force. In such cases, additional positive recruitment efforts may be undertaken to broaden the applicant pool to include qualified women and minorities. OCR would approve (but not require) the decision to keep open competition for the position. But it must be emphasized again that nothing in an affirmative action plan requires the employment of any specific number of women or minorities.

Thus, if the Department can demonstrate that it has taken all recruitment steps required under its affirmative action plan—and even though no (or very few) applications have been received from women and minorities—there would be no requirement that the recruitment period be extended, as in the following example:

> C. The Physics Department took all the affirmative recruitment steps called for by the university's affirmative action plan, and advertised the opening for several months. At the end of that time, no women and no minority candidates had applied and the recruitment procedure was concluded.

The Department was justified in ending the recruitment period, inasmuch as it had done everything possible to publicize the opening for a reasonable period of time.

III. JOB REQUIREMENTS MUST BE APPLIED UNIFORMLY TO ALL CANDIDATES WITHOUT REGARD TO RACE, COLOR, SEX, RELIGION, OR NATIONAL ORIGIN

The *Guidelines* stress the need for standardized employment practices that minimize the opportunity for arbitrary and/or discriminatory hiring decisions. It is not intended that affirmative action should result in a dilution of standards in order to attain the objectives of the Executive Order. Consider the example of the following institution, which violated the Executive Order:

"Because of the small size and location of X University, its History Department had experienced considerable difficulty in recruiting women and minorities for several teaching positions in the past. Consequently, the department chairman, with the support of his faculty and administration, waived the Ph. D. requirement for those women or minorities who wished to apply for the vacant Associate Professor position but retained the requirement for males or non-minorities applying for the same position and for all other positions."

The Executive Order does not require that job requirements be waived or lowered in order to attract women and minority candidates. Indeed, it expressly forbids differential standards based on race, color, sex, religion or national origin. Further, it requires that once valid job requirements are established, they must be applied equally to all candidates. It is discriminatory for such requirements to be applied selectively on the basis of race, color, religion, sex, or national origin. Thus, the history department must either waive the Ph. D. requirement for all applicants (without regard to race or sex) or maintain it for all applicants.

IV. A JOB REQUIREMENT WHICH RESULTS IN A DISPROPORTIONATE IMPACT UPON MINORITIES AND/OR WOMEN CAN BE MAINTAINED ONLY IF IT IS JOB-RELATED

As the *Guidelines* make very clear (page 4), the Executive Order does not require an institution to eliminate or dilute legitimate employment standards by which to measure prospective employees. On the other hand, no standards or criteria which have, by intent or effect, worked to exclude women and minorities as a class can be utilized, unless the institution can demonstrate the necessity of such standards to the performance of the job in question. For example:

"X Law School has established a Teaching Fellows Program which is responsible for the administration of the law school's clinical practice program. The requirement for Teaching Fellows includes holding a graduate law degree as well as an LL.B. or J.D. Degree. In analyzing its workforce for its affirmative action program, the law school learns that this job requirement disproportionately excludes blacks from consideration for the Teaching Fellows positions."

In order to continue the requirement for a graduate law degree, the law school must demonstrate that the requirement is related to successful job performance. If the law school is able to demonstrate that the skills and knowledge acquired through the advanced law degree are necessary for effective job performance, the job requirement can be maintained. On questions relevant to the validity of the requirement, the opinion or testimony of persons experienced in the conduct of legal aid clinics will be given substantial weight by HEW.

V. A UNIVERSITY IS REQUIRED TO OBTAIN INFORMATION ON THE RACE, SEX, AND ETHNIC IDENTITY OF APPLICANTS FOR EMPLOYMENT

The Executive Order establishes the principle that Federal contractors, including colleges and universities, are required to collect and maintain data on the race, sex and ethnic identity of all applicants for employment.

The collection and analysis of such data is recognized as an essential means of providing both the institution and the Federal Government with the information necessary to monitor the compliance posture of the institution. In the case of universities and colleges, the collection of such data is particularly essential for the workforce analysis required by Revised Order No. 4. Each institution must adopt safeguards to ensure that such information cannot be used as a basis for discrimination.

Preserving the anonymity of applicants in the collection of applicant flow data can be accomplished by gathering the requisite race, sex, and ethnic data separately from the application form. Furthermore, applicants should be instructed not to identify themselves by name or number on this form. If the institution wishes to determine applicant response for a particular position, the data form may be coded by position, as long as it does not individually identify any applicant.

This document is intended to help clarify areas of confusion which have arisen during the implementation of contractor requirements set forth in the Executive Order regulations. This Memorandum should be circulated among all members of your administrative staffs. Experience of the recent past seems to indicate that much of the existing confusion over affirmative action requirements has resulted from an absence of clear lines of communication concerning Federal regulations. It is most important that all officials charged with recruiting and hiring responsibilities have a clear understanding of the *Higher Education Guidelines* and that they ensure that institutional employment conforms to the provisions of those *Guidelines*.

Additional copies of this Memorandum may be obtained from the Regional Office for Civil Rights in your area, or from the Office for Civil Rights, Department of Health, Education and Welfare, Washington, D.C. 20201. Requests for technical assistance and inquiries relating to development and implementation of affirmative action programs should also be addressed to these Offices.

Thank you for your continuing cooperation.

PETER E. HOLMES,
Director, Office for Civil Rights.
